

Correction to Multistep, Eight-Electron Oxidation Catalyzed by the Cofactorless Oxidase, PqqC: Identification of Chemical Intermediates and Their Dependence on Molecular Oxygen

Florence Bonnot, Anthony T. Iavarone, and Judith P. Klinman*

Biochemistry 2013, 52 (27), 4667–4675. DOI: 10.1021/bi4003315

Page 4674. In the last paragraph of the Discussion, we have misstated the ratio of K_d values for the binding of PQQ and PQQH₂ to PqqC as 25. This ratio was based on a previously published K_d (PQQ) value of 2 nM, whereas in the present work, we estimate K_d (PQQ) to be 5 nM. The latter value leads to a K_d (PQQH₂)/ K_d (PQQ) ratio of ~10.
