

## SUBJECT INDEX

- Acetabularia mediterranea*, effect of enucleation on synthesis of RNA and cytoplasmic proteins . . . . . 407
- Acetobacter suboxydans* and *Acetobacter melanogenum*, mechanism and localization of hexonate metabolism in — 171
- N-Acetyl amino sugars, improved method for detection on paper chromatograms. . . . . 308
- Acetyl-coenzyme A, direct conversion of malonic semialdehyde to — . . . . 276
- Adenosine nucleotides, breakdown in bone at physiological pH. . . . . 539
- Adenosine triphosphatase, myofibrillar —, participation of a dialyzable cofactor in the relaxing factor system of muscle, studies with — . . . . . 218
- Adenosine triphosphate, rotary dispersion of ITP and the influence of metals on ITP and — . . . . . 303
- Adenylate kinase, of water-soluble liver fraction, separation from nucleoside monophosphate kinase . . . . . 594
- Alanine dehydrogenase, from mycobacteria, purification, properties and mechanism of action . . . . . 527
- Albumin, human serum —, degradation by pepsin, trypsin and chymotrypsin, comparative study by immunoelectrophoresis and electrophoresis in agar . . . . . 10
- , serum —, note on N-terminal residue of — . . . . . 558
- Amino acid, C-terminal — of carboxypeptidase A . . . . . 296
- , incorporation of analog into bacterial proteins. . . . . 39
- D-Amino acid oxidase, inhibition by chlorotetracycline, mechanism. . . . . 372
- Amino acids, composition of some invertebrate and vertebrate collagens . . . . 24
- , sequence around reactive serine of elastase . . . . . 243
- Amoeba, occurrence of glycolytic enzymes and enzymes of tricarboxylic acid cycle in — . . . . . 592
- $\alpha$ -Amylase, studies on mechanism of protein synthesis, incorporation of ethionine into — of *Bacillus subtilis*. . . . . 158
- Antibodies, some studies on chemical modification of — . . . . . 439
- Arginine, some physiological and genetic properties of strain of *Escherichia coli* requiring thymine, uracil and — . 341
- Ascites tumour, see Tumour
- Avian PFLO 5969, an extreme example of the coding problem . . . . . 578
- Azotobacter vinelandii*, oxidative phosphorylation in — . . . . . 485
- Bacillus subtilis*, studies on mechanism of protein synthesis, incorporation of ethionine into  $\alpha$ -amylase of — . . 158
- Bacillus subtilis* R, effect of inhibitors on lytic enzyme synthesis by — . . . 325
- Bacteriophage, electron microscopic study of thin sections of bacteria and — grown on agar plates . . . . . 84
- Bone, breakdown of adenosine and inosine nucleotides at physiological pH in — . . . . . 539
- Bradykinin, from total bovine plasma . . 135
- Carbohydrate, studies on — metabolism of *Fasciola hepatica*. . . . . 456
- Carboxypeptidase A, C-terminal amino acid of — . . . . . 296
- Casein, from cow's milk, isolation and amino acid composition of a glycopeptidic substance obtained by the action of rennin on — . . . . . 565
- Chlorella*, effects of illumination and oxygen supply upon levels of pyridine nucleotides in — cells. . . . 202
- , lysine biosynthesis in — and *Euglena*: phylogenetic significance . 282
- Chlortetracycline, mechanism of inhibition of D-amino acid oxidase by — . . . 372
- Cholesterol, oxidation by mouse liver mitochondria, studies . . . . . 596
- Chromatography, fractionation of bovine thyrotrophin and luteinizing hormone on cellulose ion exchange columns. . . . . 430
- , ion-exchange —, purification of renin . . . . . 246
- , —, simple method for quantitative analysis of sugars by — . . . . 546
- , paper —, improved method for detection of N-acetyl amino sugars . 308
- Chymotrypsin, degradation of serum albumin by pepsin, trypsin and —, comparative study by immunoelectrophoresis and electrophoresis in agar . . . . . 10
- $\alpha$ -Chymotrypsinogen, deuterium exchange and reversible denaturation of — 602
- Clupeine, peptides obtained by tryptic digestion of — . . . . . 600
- Coenzyme Q oxidase, studies on electron transport system . . . . . 183

- Collagenase, specificity of — . . . . . 298
- Collagens, amino acid composition and structure of some invertebrate and vertebrate — . . . . . 24
- Cornea, multiple forms of lactic dehydrogenase in rabbit — . . . . . 260
- Cytochrome *c*, microestimation of succinate and the extinction coefficient of — . . . . . 255
- Desoxyribonucleic acid, see Nucleic acid
- Diacetylmonoxime, mechanism of prophylactic action of — against sarin poisoning . . . . . 555
- Diaphorase, the enzymic defect of hereditary methaemoglobinemia . . . . . 584
- Diisopropylphosphorofluoridate, chemical basis of "ageing process" of pseudocholinesterase inhibited by — . . . . . 576
- , chemical nature of — binding site of pseudocholinesterase . . . . . 573
- DPNH-cytochrome *c* reductase, studies on biological function of vitamin E, tocopherol and, — . . . . . 420
- Echinococcus granulosus*, studies on metabolism, glycolysis, with special reference to hexokinases and related enzymes. . . . . 90
- Elastase, amino acid sequence around reactive serine of — . . . . . 243
- Electron microscopy, a negative staining method for high resolution — of viruses . . . . . 103
- , studies of hyaluronic acid-protein gels. . . . . 124
- , study of thin sections of bacteria and bacteriophage grown on agar plates . . . . . 84
- Electron transport system, coenzyme Q oxidase, studies . . . . . 183
- Electrophoresis, description of a technique combining simultaneously immunochemical precipitation and — in gel . . . . . 258
- , experiments in segmental systems composed of polyurethane foam . . . . . 67
- , in agar, degradation of albumin by pepsin, trypsin and chymotrypsin, comparative study by immunoelectrophoresis and — . . . . . 10
- Enolase, yeast —, degradation with leucine aminopeptidase and carboxypeptidase without change in enzymic activity, N- and C-terminal residues of the enzyme . . . . . 196
- Escherichia coli*, alterations in radiosensitivity of — through modification of cellular macromolecular components. . . . . 110
- , continuous synthesis of DNA in — . . . . . 580
- , pyrophosphate formation in cell-free extracts of — . . . . . 586
- , some physiological and genetic properties of strain requiring thymine, arginine and uracil . . . . . 341
- Euglena*, lysine biosynthesis in — and *Chlorella*: phylogenetic significance . . . . . 282
- Fasciola hepatica*, studies on carbohydrate metabolism of — . . . . . 456
- Fatty acids, formation of glycerides with saturated and unsaturated — in rat liver particles. . . . . 79
- , spectrophotometric assay and stoichiometry of synthesis of — . . . . . 227
- Felinine, biosynthesis of —, studies . . . . . 279
- <sup>14</sup>C-Fluorophenylalanine, *in vitro* incorporation into haemoglobin of rabbit reticulocytes. . . . . 561
- Fluoropyruvate, effect of bivalent metal ions on spectrum of interaction product of glutathione and — . . . . . 266
- Gentisic acid, enzymic oxidation of — . . . . . 117
- Glucose, quantitative evaluation of routes of — metabolism by use of radioactive — . . . . . 551
- D-Glucuronolactone, formation of L-gulonolactone from — with TPN-L-gulonic dehydrogenase . . . . . 563
- Glutathione, effect of bivalent metal ions on spectrum of interaction product of fluoropyruvate and — . . . . . 266
- Glycerides, formation of — with saturated and unsaturated fatty acids in rat liver particles. . . . . 79
- Glycine and glycine peptides, occurrence of independent uptake mechanisms for — in *Lactobacillus casei* . . . . . 292
- Glycolysis, *Echinococcus granulosus*, study with special reference to hexokinases and related glycolytic enzymes. . . . . 90
- L-Gulonic acid, formation of L-xylulose from — in rat kidney . . . . . 464
- L-Gulonolactone, formation from D-glucuronolactone with TPN-L-gulonic dehydrogenase . . . . . 563
- Haematin, reactions of — with peroxides and other oxidizing agents. . . . . 558
- Haemoglobin, *in vitro* incorporation of [<sup>14</sup>C]fluorophenylalanine into — of rabbit reticulocytes. . . . . 561
- Hemachatus hemachatus*, fractionation of venom from — . . . . . 503
- Hexokinases, and related glycolytic enzymes, study of glycolysis in *Echinococcus granulosus*, with special reference to — . . . . . 90
- Hexokinase, properties of particulate — of Krebs-2 ascites tumour . . . . . 515
- Histidine decarboxylase, from rat peritoneal fluid mast cells, characterization of — . . . . . 392
- Hyaluronic acid, electron microscopic studies of gels and their complexes with proteins . . . . . 124
- Hydrouracil, and derivatives, contribution of — to pyrimidine biosynthesis, mechanism studies . . . . . 165
- $\beta$ -Hydroxyaspartic acid, natural occurrence of — . . . . . 582
- Immunoelectrophoresis, degradation of albumin by pepsin, trypsin and

- chymotrypsin, comparative study by electrophoresis in agar and ——— . . . 10
- Inosine nucleotides, breakdown in bone at physiological pH . . . . . 539
- Inosine triphosphate, rotary dispersion of ——— and the influence of metals on ATP and ——— . . . . . 303
- Insulin, biological activity of derivatives . . . 257
- n-Lactic acid, dehydrogenation by soluble enzyme from kidney mitochondria . . . 290
- Lactic dehydrogenase, difference in stereospecificity between ——— extracted from aerobically and anaerobically grown yeast . . . . . 262
- , multiple forms of ——— in rabbit cornea . . . . . 260
- Lactobacillus casei*, occurrence of independent uptake mechanisms for glycine and glycine peptides in ——— 292
- Limulus polyphemus*, study on localization of contractile proteins in muscle of ——— . . . . . 147
- Lipids, a simplified spectrophotometric determination of ester groups in ——— 244
- Luteinizing hormone, fractionation of bovine thyrotrophin and ——— on cellulose ion exchange columns. . . 430
- Lysine, biosynthesis in *Chlorella* and *Euglena*: phylogenetic significance . . . 282
- Lysolecithin, isolation and identification of ——— from lipid extracts of normal human serum . . . . . 288
- Lytic enzyme, *Bacillus subtilis* R, effect of inhibitors on synthesis of ——— . . . 325
- Malonic semialdehyde, direct conversion to acetyl-coenzyme A . . . . . 276
- Meromyosins, homogeneity and molecular weights of ——— and their relative proportions in myosin. . . . . 470
- Metal ions, study of the ordered adsorption on the surface of cellulose microfibrils . . . 47
- Methaemoglobinemia, diaphorase: the enzymic defect of hereditary ——— . . . 584
- Methylated purines, see Purines
- Mitochondria, dehydrogenation of D-lactate by soluble enzyme from kidney ——— . . . . . 290
- , on the oxidation of cholesterol by mouse liver ——— . . . . . 596
- Mucoprotein, bovine salivary ———, 6- $\alpha$ -D-sialyl-N-acetylgalactosamine as the neuraminidase-susceptible prosthetic group of ——— . . . . . 380
- Mycobacteria, production of pentose intermediates during growth of ——— . . . 398
- , purification, properties and mechanism of action of alanine dehydrogenase . . . . . 527
- Myosin, relative proportions of meromyosins in ——— . . . . . 470
- Neuraminidase, 6- $\alpha$ -D-sialyl-N-acetylgalactosamine: the prosthetic group of bovine salivary mucoprotein susceptible to ——— . . . . . 380
- Nicotinic acid hydroxylase system, subcellular particles and the ——— in extracts of *Pseudomonas fluorescens* KB<sub>1</sub> . . . . . 354
- Nocardia opaca*, production of pentose intermediates during growth of ——— 398
- Nuclei, incorporation of <sup>32</sup>P into isolated ——— of rabbit appendix, role of DNA . . . 444
- Nucleic acid, desoxyribo ———, continuous synthesis of ——— in *Escherichia coli* . . . 580
- , ———, incorporation of <sup>32</sup>P into isolated nuclei of rabbit appendix, role of ——— . . . . . 444
- , ———, studies on fractionation of transforming ——— of pneumococcus, recovery and dose-response relationships . . . . . 497
- , ribo ———, *Acetabularia mediterranea*, effect of enucleation on synthesis of cytoplasmic proteins and ——— . . . 407
- , ———, additional components in ——— of rat liver fractions . . . . . 286
- , ———, metabolic interrelationships between soluble and microsomal ——— in rat liver. . . . . 272
- Nucleoprotein, ribo ———, metabolic stability of ——— particles in growing yeast cells . . . . . 284
- , ———, studies on protein synthesis with ——— particles from pea seedlings . . . 1
- Nucleoside monophosphate kinase, separation of adenylate kinase of water-soluble liver fraction from ——— . . . 594
- Osseous salts, composition in ossifying tissue, influence of treatment of bone mineralization on synthetic calcium phosphates . . . . . 58
- Oxidative phosphorylation, in *Azotobacter vinelandii* . . . . . 485
- Pepsin, degradation of serum albumin by trypsin, chymotrypsin and ———, comparative study by immunoelectrophoresis and electrophoresis in agar . . . . . 10
- Phosphatases, placental ——— . . . . . 313
- Phosphoramidic acid, enzymic cleavage of ——— . . . . . 274
- Placenta, phosphatases of ——— . . . . . 313
- Pneumococcus, studies on fractionation of transforming DNA of ———, recovery and dose-response relationships . . . 503
- Polynucleotides, interaction with cations . . . 234
- Polypeptides, method of desalting certain ——— . . . . . 251
- Polyphenol oxidase, simplified method for purification of mushroom ——— . . . 248
- Protein, a new reagent for guanidination of ——— . . . . . 294
- , contractile ———, study on localization in muscle of *Limulus polyphemus* . . . . . 147
- , cytoplasmic ———, *Acetabularia mediterranea*, effect of enucleation on synthesis of RNA and ——— . . . . . 407

- Protein, incorporation of amino acid analog into bacterial ——— 39  
 ———, studies on mechanism of synthesis, incorporation of ethionine into  $\alpha$ -amylase of *Bacillus subtilis* . . . 158  
 ———, studies on synthesis with ribonucleoprotein particles from pea seedlings . . . 1  
 Prothrombin, some chemical changes associated with ——— activation . . . 299  
 Pseudocholinesterase, chemical basis of "ageing process" of DFP-inhibited ——— . . . 576  
 ———, chemical nature of DFP-binding site of ——— . . . 573  
*Pseudomonas fluorescens* KB<sub>1</sub>, sub-cellular particles and the nicotinic acid hydroxylase system in extracts of ——— 354  
 Purines, methylated ———, distribution in cell fractions from mouse liver and tumour . . . 567  
 Pyridine nucleotides, effects of illumination and oxygen supply upon levels of ——— in *Chlorella* cells . . . 203  
 Pyrimidine, contribution of hydrouracil and derivatives to biosynthesis of ———, mechanism studies . . . 165  
 Pyrophosphate, formation in cell-free extracts of *Escherichia coli*. . . 586  
 Relaxing factor system, of muscle, participation of a dialyzable cofactor in ——— . . . 211, 218, 224  
 Renin, purification by use of ion-exchange chromatography . . . 246  
 Reticulocytes, rabbit, *in vitro* incorporation of <sup>14</sup>C-fluorophenylalanine into haemoglobin of ——— . . . 561  
 Ribonucleic acid, see Nucleic acid  
 Ribonucleoprotein, see Nucleoprotein  
 Sarin poisoning, mechanism of prophylactic action of diacetylmonoxime against ——— . . . 555  
 Serine, amino acid sequence around reactive ——— of elastase . . . 243  
 Serum, isolation and identification of lysolecithin from lipid extracts of normal human ——— . . . 288  
 6- $\alpha$ -D-Sialyl-N-acetylgalactosamine, neuraminidase-susceptible prosthetic group of bovine salivary mucoprotein . . . 380  
 Succinic acid, microestimation of ——— and the extinction coefficient of cytochrome *c* . . . 255  
*Tetrahymena pyriformis*, a mammalian and protozoan electron-transport inhibitor in ——— . . . 589  
 Thiamine, enzymic synthesis of ——— . . . 277  
 2-Thiouracil, effect on infectivity of TMV . . . 570  
 Thymine, some physiological and genetic properties of strain of *Escherichia coli* requiring arginine, uracil and ——— . 341  
 Thyrotrophin, fractionation of bovine ——— and luteinizing hormone on cellulose ion exchange columns. . . 430  
 Tobacco mosaic virus, see Virus  
 Tocopherol, see Vitamin E  
 TPN-L-gulonic dehydrogenase, formation of L-gulonolactone from D-glucuronolactone with ——— . . . 563  
 Trypsin, autolysis of ——— in the presence of urea . . . 588  
 ———, changes in ultraviolet absorption spectrum associated with disruption of tertiary structure . . . 548  
 ———, degradation of serum albumin by pepsin, chymotrypsin and ———, comparative study by immunoelectrophoresis and electrophoresis in agar . . . 10  
 Tryptophan, evidence for a new oxidative pathway for ——— . . . 598  
 Tumour, distribution of methylated purines in cell fractions from mouse liver and ——— . . . 567  
 ———, Krebs-2 ascites ———, properties of particulate hexokinase of ——— . . . 515  
 Turnip yellow mosaic virus, see Virus  
 Uracil, some physiological and genetic properties of strain of *Escherichia coli* requiring thymine, arginine and ——— 341  
 Urease, mechanism of action, studies. . . 268  
 Uridine diphosphoglucose, in banana fruit . . . 270  
 Vasopressin, biosynthesis . . . 572  
 Venom, from ringhals cobra, fractionation . . . 503  
 Virus, a negative staining method for high resolution electron microscopy of ——— 103  
 ———, theory of adsorption and experiments on attachment of particles to non-biological surfaces . . . 10  
 ———, tobacco mosaic ———, effect of 2-thiouracil on infectivity of ——— . . . 570  
 ———, ———, equilibrium centrifugation of two strains in density gradients . . . 254  
 ———, turnip yellow mosaic ———, determination of diffusion coefficient by gel-precipitin technique. . . 553  
 Vitamin E, studies on biological function, tocopherol and DPNH-cytochrome *c* reductase . . . 420  
 L-Xylulose, formation from L-gulonic acid in rat kidney. . . 464  
 Yeast, grown aerobically and anaerobically, difference in stereospecificity between lactic dehydrogenase extracted from ——— . . . 262  
 ———, metabolic stability of ribonucleoprotein particles in growing cells . . . 284
