

## SUBJECT INDEX

- Actin activation  
Effect of temperature on ——— of heavy meromyosin ATPase (Barouch, Moos) (234) 183
- Actin polymers  
Transformation of plasmodium ——— at high temperatures (Totsuka) (234) 162
- Active site  
Evidence for the involvement of non-heme iron in the ——— of hydrogenase from *Desulfovibrio vulgaris* (Le Gall et al.) (234) 525
- Actomyosin  
Cardiac myofibrillar ATPase: A comparison with that of fast skeletal ——— in its native and in an altered conformation (Muir et al.) (234) 199
- Algae  
Light-induced shifts in pigment absorption in green, red and blue-green ——— (Amesz, Visser) (234) 62
- ATP  
—— cellular levels in *Rhodospirillum rubrum* during transition from aerobic to anaerobic metabolism (Oelze, Kamen) (234) 137
- ATPase  
Effect of temperature on actin activation of heavy meromyosin ——— (Barouch, Moos) (234) 183
- ATPase  
Effects of pressure on ——— of myosin A, heavy meromyosin, and Subfragment 1 (Ikkai, Ooi) (234) 190
- ATPase  
Cardiac myofibrillar ———: A comparison with that of fast skeletal actomyosin in its native and in an altered conformation (Muir et al.) (234) 199
- ATP-dependent steroid hydroxylation  
Steroid hydroxylations in rat adrenal mitochondria. III. The ATP-steroid-oxygen stoichiometry of ——— (Sauer) (234) 287
- ATP synthesis  
Free -SH variations during ——— by oxidative phosphorylation in heart muscle mitochondria (Sabadie-Pialoux, Gautheron) (234) 9
- Azotobacter vinelandii*  
Effect of osmotic pressure of the medium on the volume of intact cells of ——— and on the rate of respiration (Knowles, Smith) (234) 144
- Azotobacter vinelandii*  
Relationship between substrate-induced respiration and swelling in ——— (Knowles, Smith) (234) 153
- Bacillus subtilis*  
Oxido-reduction reactions on the level of cytoplasmic membranes and mesosomes of ——— (Frehel et al.) (234) 226
- Carbon dioxide fixation  
Activation of ——— in isolated spinach chloroplasts (Jensen) (234) 360
- Chlorella  
Action of low concentrations of hydroxylamine on oxygen evolved by ——— and spinach chloroplasts (234) 103
- Chlorella pyrenoidosa  
Kinetic and spectral resolution of two components of delayed emission from ——— (Bonaventura, Kindergan) (234) 249
- Chloroplast envelope  
Inner membrane of the ——— as the site of specific metabolite transport (Heldt, Sauer) (234) 83
- Chloroplasts  
Inhibitory site of carbonyl cyanide *m*-chlorophenylhydrazine in the electron transfer system of the ——— (Kimimura et al.) (234) 92
- Chloroplasts  
Action of low concentrations of hydroxylamine on oxygen evolved by *Chlorella* and spinach ——— (Bouges) (234) 103
- Chloroplasts  
Effect of temperature on the fluorescence kinetics of spinach ——— (Thorne, Boardman) (234) 113
- Chloroplasts  
Dielectrophoresis of ——— (Ting et al.) (234) 324
- Chloroplast  
Plastocyanin participation in ——— Photosystem I (Baszynski et al.) (234) 537
- Chloroplasts  
Photooxidation of cytochromes in leaves and ——— at liquid-nitrogen temperature (Boardman et al.) (234) 126
- Chloroplasts  
Relations between photosynthetic assimilation of CO<sub>2</sub> and photophosphorylation of isolated ———. I. Stimulation of CO<sub>2</sub> fixation by antimycin A, antagonist of its inhibition by phosphate (Champigny, Miginiac-Maslow) (234) 335
- Chloroplasts  
Relations between photosynthetic assimilation of CO<sub>2</sub> and phosphorylation of isolated ———. II. Utilization of ATP in photosynthetic assimilation of CO<sub>2</sub> (Miginiac-Maslow, Champigny) (234) 344
- Chloroplasts  
Study on endogenous photophosphorylation

- of isolated spinach ——— (Miginiac-Maslow) (234) 353
- Chlorophyll-protein complexes  
Are specific ——— required for photosynthesis? (Gregory et al.) (234) 330
- Chlorophyll a fluorescence  
pH control of the ——— in algae (Papageorgiou, Govindjee) (234) 428
- Chromatium  
Redox properties of the "P-836" pigment complex of ——— (Schmidt, Kamen) (234) 70
- Chromatium  
Iron-containing proteins in ———. I. Solubilization of membrane-bound cytochrome (Kennel et al.) (234) 458
- Conformations  
Biochemical and biophysical studies on cytochrome  $aa_3$ . II. ——— of oxidized cytochrome  $aa_3$  (Muijsers et al.) (234) 481
- Cytochrome  $aa_3$   
Biochemical and biophysical studies on ———. I. Steady-state kinetics of cytochrome  $aa_3$  (Van Buuren et al.) (234) 468
- Cytochrome  $aa_3$   
Biochemical and biophysical studies on ———. II. Conformations of oxidized cytochrome  $aa_3$  (Muijsers et al.) (234) 481
- Cytochrome  $aa_3$   
Biochemical and biophysical studies on ———. III. The EPR spectrum of NO-ferrocyanochrome  $a_3$  (Blokzijl-Homan, Van Gelder) (234) 493
- Cytochrome c  
Electron-transfer-coupled proton release of ——— (Czerlinski, Dar) (234) 57
- Cytochromes  
Photooxidation of ——— in leaves and chloroplasts at liquid-nitrogen temperature (Boardman et al.) (234) 126
- Cytochromes  
EPR and light absorption studies on c-type ——— of the anaerobic sulphate reducer *Desulfovibrio* (Le Gall et al.) (234) 499
- Cytoplasmic membranes  
Oxido-reduction reactions on the level of ——— and mesosomes of *Bacillus subtilis* (Frehel et al.) (234) 226
- Desulfovibrio*  
EPR and light absorption studies on c-type cytochromes of the anaerobic sulphate reducer ——— (Le Gall et al.) (234) 499
- Dielectrophoresis  
——— of chloroplasts (Ting et al.) (234) 324
- Electron acceptors  
Fluorescence induction studies in isolated chloroplasts. III. On the electron-transfer equilibria in the pool of ——— of Photosystem II (Malkin) (234) 415
- Electron transfer  
——— coupled proton release of cytochrome c (Czerlinski, Dar) (234) 57
- Electron transfer  
Fluorescence induction studies in isolated chloroplasts. III. On the ——— equilibria in the pool of electron acceptors of Photosystem II (Malkin) (234) 415
- Electron transfer system  
Inhibitory site of carbonyl cyanide m-chlorophenylhydrazone in the ——— of the chloroplasts (Kimimura et al.) (234) 92
- Electron transport  
——— activities in rat liver endoplasmic reticulum membrane fragments prepared by chromatography on Sepharose 2B (Staron, Kaniuga) (234) 297
- Electron transport  
Pigment systems and ——— in chloroplasts. I. Quantum requirements for the two light reactions in spinach chloroplasts (Sun, Sauer) (234) 399
- Endoplasmic reticulum  
Electron transport activities in rat liver ——— membrane fragments prepared by chromatography on Sepharose 2B (Staron, Kaniuga) (234) 297
- Enzyme reactions  
Rapid microfluorimetry of ——— in single living cells (Kohen et al.) (234) 531
- EPR  
——— and light absorption studies on c-type cytochromes of the anaerobic sulphate reducer *Desulfovibrio* (Le Gall et al.) (234) 499
- EPR spectrum  
Biochemical and biophysical studies on cytochrome  $aa_3$ . III. ——— of NO-ferrocyanochrome  $a_3$  (Blokzijl-Homan, Van Gelder) (234) 493
- Fatty acid content  
Unsaturated ——— of mitochondria in relation to oxidation of exogenous reduced nicotinamide adenine dinucleotide (Guarnieri et al.) (234) 28
- Fatty acid oxidation  
Regulation mechanism for ——— and  $\alpha$ -ketoglutarate oxidation (Rossi et al.) (234) 311
- NO-ferrocyanochrome  $a_3$   
Biochemical and biophysical studies on cytochrome  $aa_3$ . III. The EPR spectrum of ——— (Blokzijl-Homan, Van Gelder) (234) 493
- Fluorescence  
pH control of the chlorophyll a ——— in algae (Papageorgiou, Govindjee) (234) 428
- Fluorescence induction  
——— studies in isolated chloroplasts. III. On the electron-transfer equilibria in the pool of electron acceptors of Photosystem II (Malkin) (234) 415
- Fluorescence kinetics  
Effect of temperature on the ——— of spinach chloroplasts (Thorne, Boardman) (234) 113
- Fraction I protein  
Specific effect of ribulose 1,5-diphosphate on the solubility of tobacco ——— (Kwok et al.) (234) 293

- Housefly mitochondria  
Permeability of ——— towards dicarboxylase ions (Tulp et al.) (234) 301
- Hydrogenase  
Evidence for the involvement of non-heme iron in the active site of ——— from *Desulfovibrio vulgaris* (Le Gall et al.) (234) 525
- Iron  
Evidence for the involvement of non-heme ——— in the active site of hydrogenase from *Desulfovibrio vulgaris* (Le Gall et al.) (234) 525
- Iron-containing proteins  
——— in Chromatium. I. Solubilization of membrane-bound cytochrome (Kennel et al.) (234) 458
- Iron deficiency  
Effects of ——— on *Rhodopseudomonas spheroides* strain Y (Reiss-Husson et al.) (234) 73
- $\alpha$ -Ketoglutarate oxidation  
Regulation mechanism for fatty acid oxidation and ——— (Rossi et al.) (234) 311
- Light reactions  
Pigment systems and electron transport in chloroplasts. I. Quantum requirements for the two ——— in spinach chloroplasts (Sun, Sauer) (234) 399
- Membrane  
Inner ——— of the chloroplast envelope as the site of specific metabolite transport (Heldt, Sauer) (234) 83
- Membrane-bound cytochrome  
Iron-containing proteins in Chromatium. I. Solubilization of ——— (Kennel et al.) (234) 458
- Membrane potential  
Anilino-naphthalenesulphonate fluorescence changes induced by non-enzymatic generation of ——— in mitochondria and sub-mitochondrial particles, (Jasaitis et al.) (234) 177
- Menaquinone  
Light-induced oxidation-reduction reactions of ——— in intact cells of a green photosynthetic bacterium, *Chloropseudomonas ethylica* (Takamiya) (234) 390
- Meromyosin  
Effects of pressure on ATPase of myosin A, heavy ———, and Subfragment 1 (Ikkai, Ooi) (234) 190
- Meromyosin  
Effect of temperature on actin activation of heavy ——— ATPase, (Barouch, Moos) (234) 183
- Metachromatic effects  
——— and binding of organic cations to energized submitochondrial particles (Dell'Antone et al.) (234) 541
- 3-Methylumiflavin  
pH dependence of the transient absorptions in the flash photolysis of ——— (Katan et al.) (234) 242
- Microfluorimetry  
Rapid ——— of enzyme reactions in single living cells (Kohen et al.) (234) 531
- Mitochondria  
Free -SH variations during ATP synthesis by oxidative phosphorylation in heart muscle ——— (Sabadie-Pialoux, Gautheron) (234) 9
- Mitochondria  
Inhibition of oxidative phosphorylation by hydroxylamine in sonicated particles from beef-heart ——— (Wikström) (234) 16
- Mitochondria  
Unsaturated fatty acid content of ——— in relation to oxidation of exogenous reduced nicotinamide adenine dinucleotide (Guarnieri et al.) (234) 28
- Mitochondria  
Anilino-naphthalenesulphonate fluorescence changes induced by non-enzymatic generation of membrane potential in ——— and submitochondrial particles (Jasaitis et al.) (234) 177
- Mitochondria  
Rapid procedure for the isolation of rat liver ——— (Carvalho Guerra et al.) (234) 222
- Mitochondria  
Steroid hydroxylations in rat adrenal ———. III. The ATP-steroid-oxygen stoichiometry of ATP-dependent steroid hydroxylation (Sauer) (234) 287
- Mitochondrial membranes  
Study of spin-probe solubility in ——— correlated with ATP-dependent conformational changes (Koltover, et al.) (234) 306
- Muscular contraction  
Effect of potentiators of ——— on contractile and enzymatic activities of sarcolemma (Carvalho et al.) (234) 210
- Myosin A  
Effects of pressure on ATPase of ———, heavy meromyosin, and Subfragment 1 (Ikkai, Ooi) (234) 190
- NADH  
Unsaturated fatty acid content of mitochondria in relation to oxidation of exogenous ——— (Guarnieri et al.) (234) 28
- NADH  
One-electron reactions in biochemical systems as studied by pulse radiolysis. IV. Oxidation of ——— (Land, Swallow) (234) 34
- Organic cations  
Metachromatic effects and binding of ——— to energized submitochondrial particles (Dell'Antone et al.) (234) 541
- Osmotic regulation  
——— of photosynthetic glycerol production in *Dunaliella* (Wegmann) (234) 317
- Oxidation  
Regulation mechanism for fatty acid and  $\alpha$ -ketoglutarate ——— (Rossi et al.) (234) 311

- Oxidation-reduction reactions  
 Light-induced — of menaquinone in intact cells of a green photosynthetic bacterium, *Chloropseudomonas ethylica* (Takamiya) (234) 390
- Oxidative phosphorylation  
 Micro-method for the study of — (Holtzman, Moore) (234) 1
- Oxidative phosphorylation  
 Free -SH variations during ATP synthesis by — in heart muscle mitochondria (Sabadie-Pialoux, Gautheron) (234) 9
- Oxidative phosphorylation  
 Inhibition of — by hydroxylamine in sonicated particles from beef-heart mitochondria (Wikström) (234) 16
- Oxygen  
 Action of low concentrations of hydroxylamine on — evolved by *Chlorella* and spinach chloroplasts (Bouges) (234) 103
- Permeability of housefly mitochondria  
 — towards dicarboxylase ions (Tulp et al.) (234) 301
- pH Control  
 — of the chlorophyll a fluorescence in algae (Papageorgiou, Govindjee) (234) 428
- Phosphorylation  
 Relations between photosynthetic assimilation of CO<sub>2</sub> and — of isolated chloroplasts. II. Utilization of ATP in photosynthetic assimilation of CO<sub>2</sub> (Miginiac-Maslow, Champigny) (234) 344
- Photooxidation  
 — of cytochromes in leaves and chloroplasts at liquid-nitrogen temperature (Boardman et al.) (234) 126
- Photophosphorylation  
 Relations between photosynthetic assimilation of CO<sub>2</sub> and — of isolated chloroplasts. I. Stimulation of CO<sub>2</sub> fixation by antimycin A, antagonist of its inhibition by phosphate (Champigny, Miginiac-Maslow) (234) 335
- Photophosphorylation  
 Study on endogenous — of isolated spinach chloroplasts (Miginiac-Maslow) (234) 353
- Photoreactions at -196°  
 Relationship between Q, C-550 and cytochrome b 559 in — in chloroplasts (Erixon, Butler) (234) 381
- Photorespiration  
 — during C<sub>4</sub> photosynthesis (Osmond, Harris) (234) 270
- Photosynthesis  
 Photorespiration during C<sub>4</sub> — (Osmond, Harris) (234) 270
- Photosynthetic assimilation of CO<sub>2</sub>  
 Relations between — and photophosphorylation of isolated chloroplasts. I. Stimulation of CO<sub>2</sub> fixation by antimycin A, antagonist of its inhibition by phosphate (Champigny, Miginiac-Maslow) (234) 335
- Photosynthetic assimilation of CO<sub>2</sub>  
 Relations between — and phosphorylation of isolated chloroplasts. II. Utilization of ATP in photosynthetic assimilation of CO<sub>2</sub> (Miginiac-Maslow, Champigny) (234) 344
- Photosynthetic glycerol production  
 Osmotic regulation of — in *Dunaliella* (Wegmann) (234) 317
- Photosynthetic green sulphur bacteria  
 Isolation and properties of rubredoxin from the — (Meyer et al.) (234) 266
- Photosystem I  
 Plastocyanin participation in chloroplast — (Baszynski et al.) (234) 537
- Photosystem 2  
 Reactions at 77°K in — of green plants (Bendall, (Sofrová) (234) 371
- Photosystem II  
 Fluorescence induction studies in isolated chloroplasts. III. On the electron-transfer equilibria in the pool of electron acceptors of — (Malkin) (234) 415
- Photosystem II mutants  
 Observations on — of *Scenedesmus*: Pigments and proteinaceous components of the chloroplasts (Bishop, Wong) (234) 433
- Pigment absorption  
 Light-induced shifts in — in green, red and blue-green algae (Amesz, Visser) (234) 62
- "P-836" pigment complex  
 Rodox properties of the — of Chromatium (Schmidt, Kamen) (234) 70
- Pigments  
 Observations on Photosystem II mutants of *Scenedesmus*: — and proteinaceous components of the chloroplasts (Bishop, Wong) (234) 433
- Pigment systems  
 — and electron transport in chloroplasts. I. Quantum requirements for the two light reactions in spinach chloroplasts (Sun, Sauer) (234) 399
- Plastocyanin  
 — participation in chloroplast Photosystem I (Baszynski et al.) (234) 537
- Polymorphonuclear neutrophils  
 Pyridine nucleotide oxidation by intact human — (Mandell, Sullivan) (234) 43
- Proton release  
 Electron-transfer-coupled — of cytochrome c (Czerlinski, Dar) (234) 57
- Protoporphyrin  
 Effect of Zn- — accumulation by yeast cells on synthesis and activity of their respiratory system (Gilarde et al.) (234) 446
- Pulse radiolysis  
 One-electron reactions in biochemical systems as studied by —. IV. Oxidation of dihydronicotinamide-adenine dinucleotide (Land, Swallow) (234) 34
- Pyridine nucleotide oxidation  
 — by intact human polymorphonuclear neutrophils (Mandell, Sullivan) (234) 43

- Quantum requirements  
 Pigment systems and electron transport in chloroplasts. ——— for the two light reactions in spinach chloroplasts (Sun, Sauer) (234) 399
- Reactions at 77°K  
 ——— in Photosystem 2 of green plants (Bendall, Sofrová) (234) 371
- Respiration  
 Effect of osmotic pressure of the medium on the volume of intact cells of *Azotobacter vinelandii* and on the rate of ——— (Knowles, Smith) (234) 144
- Respiration  
 Relationship between substrate-induced ——— and swelling in *Azotobacter vinelandii* (Knowles, Smith) (234) 153
- Respiratory complex  
 Preparation and properties of a solubilized ——— from *Escherichia coli* (Baillie et al.) (234) 46
- Respiratory system  
 Effect of Zn-protoporphyrin accumulation by yeast cells on synthesis and activity of their ——— (Gilarde et al.) (234) 446
- Rhodospirillum rubrum*  
 Adenosine triphosphate cellular levels in ——— during transition from aerobic to anaerobic metabolism (Oelze, Kamen) (234) 137
- Rhodopseudomonas spheroides*  
 Effects of iron deficiency on ——— strain Y (Reiss-Husson et al.) (234) 73
- Ribulose 1,5-diphosphate  
 Specific effect of ——— on the solubility of tobacco Fraction I protein (Kwok et al.) (234) 293
- Rubredoxin  
 Isolation and properties of ——— from the photosynthetic green sulphur bacteria (Meyer et al.) (234) 266
- Sarcolemma  
 Effect of potentiators of muscular contraction on contractile and enzymatic activities of ——— (Carvalho et al.) (234) 210
- Single living cells  
 Rapid microfluorimetry of enzyme reactions in ——— (Kohen et al.) (234) 531
- Spin-probe solubility in mitochondrial membranes  
 Study of ——— correlated with ATP-dependent conformational changes, (Koltover et al.) (234) 306
- Steady-state kinetics  
 Biochemical and biophysical studies on cytochrome aa<sub>3</sub>. I. ——— of cytochrome aa<sub>3</sub> (Van Buuren et al.) (234) 468
- Steroid hydroxylations  
 ——— in rat adrenal mitochondria. III. The ATP-steroid-oxygen stoichiometry of ATP-dependent steroid hydroxylation (Sauer) (234) 287
- Submitochondrial particles  
 Anilino-naphthalene sulphonate fluorescence changes induced by non-enzymatic generation of membrane potential in mitochondria and ——— (Jasaitis et al.) (234) 177
- Submitochondrial particles  
 Metachromatic effects and binding of organic cations to energized ——— (Dell'Antone et al.) (234) 541
- Sulphur bacteria  
 Isolation and properties of rubredoxin from the photosynthetic green ——— (Meyer et al.) (234) 266
- Transhydrogenase  
 Reversibility of the energy-linked ——— (Van de Stadt et al.) (234) 173
- Transport  
 Inner membrane of the chloroplast envelope as the site of specific metabolite ——— (Heldt, Sauer) (234) 83
- Zinc-protoporphyrin accumulation  
 Effect of ——— by yeast cells on synthesis and activity of their respiratory system (Gilarde et al.) (234) 446
