

## SUBJECT INDEX

- Absorption spectrum  
 Energy-linked change in the redox state and — of cytochrome a in situ (Wikström) (283) 385
- Accessibility barrier  
 Studies on the — of NADH to cytochromes b in pigeon-heart mitochondria (Lee, Slater) (283) 223
- Actin  
 ATP splitting of — modified with salyrgan (Nakaoka) (283) 364
- Actin-heavy meromyosin  
 F- — complex studied by optical homodyne and heterodyne methods (Fujime et al.) (283) 351
- Antimycin  
 Oxidoreduction of cytochrome b in the presence of — (Wikström, Berden) (283) 403
- Antimycin  
 Reducibility of cytochromes b in aerobic beef-heart mitochondria treated with — (Lee, Slater) (283) 395
- ATP  
 — splitting of actin modified with salyrgan (Nakaoka) (283) 364
- ATPase  
 Affinity chromatography of mitochondrial — solubilized with Triton X-100 (Swanlung, Frigeri) (283) 391
- ATPase  
 Some properties of the — from chromatophores of *Rhodopseudomonas* spheroides and its structural relationship to the bacteriochlorophyll proteins (Reed, Raveed) (283) 79
- Bacteriochlorophyll fluorescence  
 Proton uptake and quenching of — in *Rhodopseudomonas* spheroides (Sherman, Cohen) (283) 54
- Bacteriochlorophyll proteins  
 Some properties of the ATPase from chromatophores of *Rhodopseudomonas* spheroides and its structural relationship to the — (Reed, Raveed) (283) 79
- Bicarbonate  
 Accumulation of — in intact chloroplasts following a pH gradient (Werdan, Heldt) (283) 430
- Carbon dioxide exchanges  
 Studies of the — of whole cells and of the photochemical activities of chloroplast fragments, with three non-photosynthetic mutants of *Chlamydomonas reinhardtii* (Garnier, Maroc) (283) 100
- Carotenoid band shift  
 Effect of diaminodurene on the delayed light and the — in *Rhodopseudomonas* spheroides (Sherman) (283) 67
- Chlorophyllase  
 Effect of — treatment on photooxidation of P700 in chloroplast fragments (Takamiya, Nishimura) (283) 115
- Chloroplasts  
 Accumulation of bicarbonate in intact — following a pH gradient (Werdan, Heldt) (283) 430
- Chloroplasts  
 Conversion of biomembrane-produced energy into electric form. V. Membrane particles of *Micrococcus lysodeikticus* and pea — (Grinius et al.) (283) 442
- Chloroplast  
 Effects on cytochrome b-559<sub>HP</sub> and P546 of treatments that inhibit oxygen evolution by — (Cox, Bendall) (283) 124
- Chloroplasts  
 Emission yield factor in delayed light emission by uncoupled spinach — (Wraight) (283) 247
- Chloroplasts  
 pH dependence of delayed and prompt fluorescence in uncoupled — (Wraight) (283) 259
- Chloroplasts  
 Quantitative EPR studies of the primary reaction of Photosystem I in — (Bearden, Malkin) (283) 456
- Chloroplasts  
 Role of cytochrome b<sub>6</sub> in cyclic electron transport: Evidence for an energy-coupling site in the pathway of cytochrome b<sub>6</sub> oxidation in spinach — (Böhme, Cramer) (283) 302
- Chloroplasts  
 Studies on electron transport associated with Photosystem I. I. Functional site of plastocyanin: Inhibitory effects of HgCl<sub>2</sub> on electron transport and plastocyanin in — (Kimimura, Katoh) (283) 279
- Chloroplasts  
 Studies on electron transport associated with Photosystem I. II. Role of plastocyanin in methyl viologen photoreduction in French press-treated — (Katoh) (283) 293
- Chloroplast fragments  
 Effect of chlorophyllase treatment on photooxidation of P700 in — (Takamiya, Nishimura) (283) 115
- Chloroplast fragments  
 Studies of the CO<sub>2</sub> exchanges of whole cells and of the photochemical activities of —, with three non-photosynthetic mutants of *Chlamydomonas reinhardtii* (Garnier, Maroc) (283) 100

## Chromatophores

Some properties of the ATPase from ——— of *Rhodospseudomonas spheroides* and its structural relationship to the bacteriochlorophyll proteins (Reed, Raveed) (283) 79

## Chromatophores

Specificity of the transhydrogenase factor for ——— of *Rhodospseudomonas spheroides* and *Rhodospirillum rubrum* (Konings, Guillory) (283) 334

## Citric acid cycle

Ketogenesis in isolated rat liver mitochondria. I. Relationships with the ——— and with the mitochondrial energy state (Lopes-Cardozo, van den Bergh) (283) 1

## Cyclic electron transport

Role of cytochrome  $b_6$  in ———: Evidence for an energy-coupling site in the pathway of cytochrome  $b_6$  oxidation in spinach chloroplasts (Böhme, Cramer) (283) 302

## Cytochrome a

Energy-linked change in the redox state and absorption spectrum of ——— in situ (Wikström) (283) 285

## Cytochromes a

Oxidative phosphorylation in yeast. X. Phosphorylation ability of mutants deficient in ——— and b (Šubík et al.) (283) 146

Cytochrome  $a_1$ 

Solubilization and purification of ——— from *Nitrosomonas* (Erickson et al.) (283) 155

Cytochrome  $aa_3$ 

Biochemical and biophysical studies on ———. IX. Reaction of cytochrome  $aa_3$  with hydrazine (Muijsers et al.) (283) 30

Cytochrome b-559<sub>HP</sub>

Effects on ——— and P<sub>546</sub> of treatments that inhibit oxygen evolution by chloroplast (Cox, Bendall) (283) 124

## Cytochrome b

Oxidative phosphorylation in yeast. X. Phosphorylation ability of mutants deficient in ——— and a (Šubík et al.) (283) 146

## Cytochrome b

Oxidoreduction of ——— in the presence of antimycin (Wikström, Berden) (283) 403

## Cytochromes b

Reducibility of ——— in aerobic beef-heart mitochondria treated with antimycin (Lee, Slater) (283) 395

## Cytochrome b

Reduction and oxidation of longer-wave-length ——— ( $b_{668}$ ) in rat liver mitochondria under the influence of external oxidants (Muraoka, Okada) (283) 36

Cytochrome  $b_6$ 

Role of ——— in cyclic electron transport: Evidence for an energy-coupling site in the pathway of cytochrome  $b_6$  oxidation in spinach chloroplasts (Böhme, Cramer) (283) 302

## Cytochromes b

Studies on the accessibility barrier of NADH to ——— in pigeon-heart mitochondria (Lee, Slater) (283) 223

## Cytochrome oxidase

Conformational changes in ——— as studied by sedimentation difference (Cabral, Love) (283) 181

## Delayed light

Effect of diaminodurene on the ——— and the carotenoid band shift in *Rhodospseudomonas spheroides* (Sherman) (283) 67

## Delayed light emission

Emission yield factor in ——— by uncoupled spinach chloroplasts (Wraight) (283) 247

## Diaminodurene

Effect of ——— on the delayed light and the carotenoid band shift in *Rhodospseudomonas spheroides* (Sherman) (283) 67

## Dicyclohexylcarbodiimide

Effect of N,N'- ——— on anaerobic and aerobic phosphate uptake by baker's yeast (Huygen, Borst-Pauwels) (283) 234

## m-Dinitrobenzene

Effect of ——— on the thermal phase of fluorescence induction in photosynthesis (Etienne, Lavergne) (283) 268

## Electric form

Conversion of biomembrane-produced energy into ———. V. Membrane particles of *Micrococcus lysodeikticus* and pea chloroplasts (Grinius et al.) (283) 442

## Electron microscopy

Role of lipids in mitochondrial energy coupling: Evidence from spin labeling and freeze-fracture ——— (Tinberg et al.) (283) 193

## Electron transfer

Some peculiarities of the steady-state kinetics of ——— in submitochondrial particles. A kinetic model based on the idea of activation of the respiratory chain induced by electron transfer (Saks et al.) (283) 42

## Electron transport

Comparison of the NADH oxidase ——— systems of two obligately chemolithotrophic bacteria (Sadler, Johnson) (283) 167

## Electron transport

Role of cytochrome  $b_6$  in cyclic ———: Evidence for an energy-coupling site in the pathway of cytochrome  $b_6$  oxidation in spinach chloroplasts (Böhme, Cramer) (283) 302

## Electron transport

Studies on ——— associated with Photosystem I. I. Functional site of plastocyanin: Inhibitory effects of HgCl<sub>2</sub> on electron transport and plastocyanin in chloroplasts (Kimimura, Katoh) (283) 279

## Electron transport

Studies on ——— associated with Photosystem I. II. Role of plastocyanin in methyl

- viologen photoreduction in French press-treated chloroplasts (Katoh) (283) 293
- Emission  
 Light ——— from the *Scenedesmus obliquus* wild type, mutant 8, and mutant 11 strains, measured under steady-state conditions between 4 nanoseconds and 10 seconds (Haug et al.) (283) 92
- Emission yield factor  
 ——— in delayed light emission by uncoupled spinach chloroplasts (Wraight) (283) 247
- Energy  
 Conversion of biomembrane-produced ——— into electric form. V. Membrane particles of *Micrococcus lysodeikticus* and pea chloroplasts (Grinius et al.) (283) 442
- Energy coupling  
 Role of lipids in mitochondrial ———: Evidence from spin labeling and freeze-fracture electron microscopy (Tinberg et al.) (283) 193
- Energy-coupling site  
 Role of cytochrome  $b_6$  in cyclic electron transport: Evidence for an ——— in the pathway of cytochrome  $b_6$  oxidation in spinach chloroplasts (Böhme, Cramer) (283) 302
- Energy-linked change  
 ——— in the redox state and absorption spectrum of cytochrome *a* in situ (Wikström) (283) 385
- Energy state  
 Ketogenesis in isolated rat liver mitochondria. I. Relationships with the citric-acid cycle and with the mitochondrial ——— (Lopes-Cardozo, van den Bergh) (283) 1
- Energy transduction  
 Oxidative phosphorylation in mutants of *Escherichia coli* defective in ——— (Gutnick et al.) (283) 217
- EPR  
 Quantitative ——— studies of the primary reaction of Photosystem I in chloroplasts (Bearden, Malkin) (283) 456
- Equivalent pore radius  
 ——— of intact and damaged mitochondria and the mechanism of active shrinkage (Massari, Azzone) (283) 23
- Escherichia coli*  
 Oxidative phosphorylation in mutants of ——— defective in energy transduction (Gutnick et al.) (283) 217
- Ferricytochrome *c*  
 The reduction mechanism of ——— (Willing et al.) (283) 543
- Insect visual pigment  
 Studies on the ——— sensitive to ultraviolet light: Retinal as the chromophoric group (Paulsen, Schwemer) (283) 520
- Irradiated rats  
 Site of impairment of oxidative phosphorylation in ——— (Alexander et al.) (283) 206
- Fluorescence  
 pH dependence of delayed and prompt ——— in uncoupled chloroplasts (Wraight et al.) (283) 259
- Fluorescence  
 Proton uptake and quenching of bacteriochlorophyll ——— in *Rhodospseudomonas spheroides* (Sherman, Cohen) (283) 54
- Fluorescence induction  
 Effect of *m*-dinitrobenzene on the thermal phase of ——— in photosynthesis (Etienne, Lavergne) (283) 268
- Glutamate  
 Transport of ——— in rat-liver mitochondria (Meijer et al.) (283) 421
- Hydrazobenzene  
 ——— oxidation by 2,6-dichlorophenol-indophenol in a photoreaction catalyzed by System I of photosynthesis. Hydrazine compounds as donors for Photosystem II (Haveman et al.) (283) 316
- Hydrogen ion effects  
 ——— and the vertebrate late receptor potential (Ward, Ostroy) (283) 373
- Ketogenesis  
 ——— in isolated rat liver mitochondria. I. Relationships with the citric acid cycle and with the mitochondrial energy state (Lopes-Cardozo, van den Bergh) (283) 1
- Leghaemoglobin  
 Redox potential of ——— (Henderson, Appleby) (283) 187
- Light emission  
 ——— from the *Scenedesmus obliquus* wild type, mutant 8, and mutant 11 strains, measured under steady-state conditions between 4 nanoseconds and 10 seconds (Haug et al.) (283) 92
- Lipids  
 Role of ——— in mitochondrial energy coupling: Evidence from spin labeling and freeze-fracture electron microscopy (Tinberg et al.) (283) 193
- Membrane particles  
 Conversion of biomembrane-produced energy into electric form. V. ——— of *Micrococcus lysodeikticus* and pea chloroplasts (Grinius et al.) (283) 442
- Meromyosin  
 F-actin-heavy ——— complex studied by optical homodyne and heterodyne methods (Fujime et al.) (283) 351
- Methyl viologen photoreduction  
 Studies on electron transport associated with Photosystem I. II. Role of plastocyanin in ——— in French press-treated chloroplasts (Katoh) (283) 293
- Micrococcus lysodeikticus*  
 Conversion of biomembrane-produced energy into electric form. V. Membrane particles of ——— and pea chloroplasts (Grinius et al.) (283) 442
- Mitochondria  
 Distribution of permeant cations in rat

- liver ——— under steady-state conditions (Massari et al.) (283) 16
- Mitochondria
- Equivalent pore radius of intact and damaged ——— and the mechanism of active shrinkage (Massari, Azzone) (283) 23
- Mitochondria
- Ketogenesis in isolated rat liver ———. I. Relationships with the citric acid cycle and with the mitochondrial energy state (Lopes-Cardozo, van den Bergh) (283) 1
- Mitochondria
- Reducibility of cytochromes b in aerobic beef-heart ——— treated with antimycin (Lee, Slater) (283) 395
- Mitochondria
- Reduction and oxidation of longer-wave-length cytochrome b ( $b_{566}$ ) in rat liver ——— under the influence of external oxidants (Muraoka, Okada) (283) 36
- Mitochondria
- Studies on the accessibility barrier of NADH to cytochrome b in pigeon-heart ——— (Lee, Slater) (283) 223
- Mitochondria
- Transport of glutamate in rat-liver ——— (Meijer et al.) (283) 421
- Mitochondrial ATPase
- Affinity chromatography of ——— solubilized with Triton X-100 (Swanljung, Frigeri) (283) 391
- Mitochondrial energy coupling
- Role of lipids in ———: Evidence from spin labeling and freeze-fracture electron microscopy (Tinberg et al.) (283) 193
- NADH
- Studies on the accessibility barrier of ——— cytochromes b in pigeon-heart mitochondria (Lee, Slater) (283) 223
- NADH oxidase
- Comparison of the ——— electron transport systems of two obligately chemolithotrophic bacteria (Sadler, Johnson) (283) 167
- Nitrate reductase
- Intracellular location of ——— and nitrite reductase. I. Spinach and tobacco leaves (Dalling et al.) (283) 505
- Nitrate reductase
- Intracellular location of ——— and nitrite reductase. II. Wheat roots (Dalling et al.) (283) 513
- Nitrite reductase
- Intracellular location of nitrate reductase and ———. I. Spinach and tobacco leaves (Dalling et al.) (283) 505
- Nitrite reductase
- Intracellular location of nitrate reductase and ———. II. Wheat roots (Dalling et al.) (283) 513
- Nitrogenase
- catalyzed reactions (Hwang, Burris) (283) 339
- Nitrosomonas
- Solubilization and purification of cytochrome a from ——— (Erickson et al.) (283) 155
- Oxidative phosphorylation
- in yeast. X. Phosphorylation ability of mutants deficient in cytochromes a and b (Šubík et al.) (283) 146
- Oxidative phosphorylation
- Site of impairment of ——— in irradiated rats (Alexander et al.) (283) 206
- Oxidative phosphorylation
- in mutants of *Escherichia coli* defective in energy transduction (Gutnick et al.) (283) 217
- Oxidoreduction
- of cytochrome b in the presence of antimycin (Wikström, Berden) (283) 403
- Oxygen evolution
- Effects on cytochrome b-559<sub>HP</sub> and P546 of treatments that inhibit ——— by chloroplast (Cox, Bendall) (283) 124
- P546
- Effects on cytochrome b-559<sub>HP</sub> and ——— of treatments that inhibit oxygen evolution by chloroplast (Cox, Bendall) (283) 124
- P700
- Effect of chlorophyllase treatment on photooxidation of ——— in chloroplast fragments (Takamiya, Nishimura) (283) 115
- Permeant cations
- Distribution of ——— in rat liver mitochondria under steady-state conditions (Massari et al.) (283) 16
- pH dependence
- of delayed and prompt fluorescence in uncoupled chloroplasts (Wraight et al.) (283) 259
- pH gradient
- Accumulation of bicarbonate in intact chloroplasts following a ——— (Werdan, Heldt) (283) 430
- Phosphate uptake
- Effect of N,N'-dicyclohexylcarbodiimide on anaerobic and aerobic ——— by baker's yeast (Huygen, Borst-Pauwels) (283) 234
- Phosphorylation ability
- Oxidative phosphorylation in yeast. X. ——— of mutants deficient in cytochromes a and b (Šubík et al.) (283) 146
- Photochemical activities
- Studies of the CO<sub>2</sub> exchanges of whole cells and, of the ——— of chloroplast fragments, with three non-photosynthetic mutants of *Chlamydomonas reinhardtii* (Garnier, Maroc) (283) 100
- Photochemical properties
- of a Photosystem II subchloroplast fragment (Boardman) (283) 469
- Photooxidation
- Effect of chlorophyllase treatment on ——— of P700 in chloroplast fragments (Takamiya, Nishimura) (283) 115
- Photooxidative reactions
- of c-phycocyanin (Abeliovich, Shilo) (283) 483

- Photophosphorylation  
Inhibition of ——— by tentoxin, a cyclic tetrapeptide (Arntzen) (283) 539
- Photoreaction  
Hydrazobenzene oxidation by 2,6-dichlorophenolindophenol in a ——— catalyzed by System I of photosynthesis. Hydrazine compounds as donors for Photosystem II (Haveman et al.) (283) 316
- Photosynthetic bacterium  
Role of the reductive carboxylic acid cycle in a ——— lacking ribulose 1,5-diphosphate carboxylase (Buchanan et al.) (283) 136
- Photosynthetic membranes  
Relations between pigments and proteins in the ——— of *Rhodospseudomonas spheroides* (Clayton, Clayton) (283) 492
- Photosynthesis  
Effect of m-dinitrobenzene on the thermal phase of fluorescence induction in ——— (Etienne, Lavergne) (283) 268
- Photosystem I  
Quantitative EPR studies of the primary reaction of ——— in chloroplasts (Bearden, Malkin) (283) 456
- Photosystem I  
Studies on electron transport associated with ———. I. Functional site of plastocyanin: Inhibitory effects of  $\text{HgCl}_2$  on electron transport and plastocyanin in chloroplasts (Kimimura, Katoh) (283) 279
- Photosystem I  
Studies on electron transport associated with ———. II. Role of plastocyanin in methyl viologen photoreduction in French press-treated chloroplasts (Katoh) (283) 293
- Photosystem II  
Hydrazobenzene oxidation by 2,6-dichlorophenolindophenol in a photoreaction catalyzed by System I of photosynthesis. Hydrazine compounds as donors for ——— (Haveman et al.) (283) 316
- Photosystem II  
Photochemical properties of a ——— subchloroplast fragment (Boardman) (283) 469
- Phycocyanin  
Photooxidative reactions of c- ——— (Abeliovich, Shilo) (283) 483
- Pigments  
Relations between ——— and protein in the photosynthetic membranes of *Rhodospseudomonas spheroides* (Clayton, Clayton) (283) 492
- Plastocyanin  
Studies on electron transport associated with Photosystem I. I. Functional site of ———: inhibitory effects of  $\text{HgCl}_2$  on electron transport and plastocyanin in chloroplasts (Kimimura, Katoh) (283) 279
- Plastocyanin  
Studies on electron transport associated with Photosystem I. II. Role of plastocyanin in methyl viologen photoreduction in French press-treated chloroplasts (Katoh) (283) 293
- Primary reaction  
Quantitative EPR studies of the ——— of Photosystem I in chloroplasts (Bearden, Malkin) (283) 456
- Proton uptake  
——— and quenching of bacteriochlorophyll fluorescence in *Rhodospseudomonas spheroides* (Sherman, Cohen) (283) 54
- Reaction center particles  
Thin-layer chromatography of pigments from ——— of *Rhodospseudomonas spheroides* (Beugeling et al.) (283) 328
- Receptor potential  
Hydrogen ion effects and the vertebrate late ——— (Ward, Ostroy) (283) 373
- Redox potential  
——— of leghaemoglobin (Henderson, Appleby) (283) 187
- Redox state  
Energy-linked change in the ——— and absorption spectrum of cytochrome a in situ (Wikström) (283) 385
- Reductive carboxylic acid cycle  
Role of the ——— in a photosynthetic bacterium lacking ribulose 1,5-diphosphate carboxylase (Buchanan et al.) (283) 136
- Respiratory chain  
Some peculiarities of the steady-state kinetics of electron transfer in submitochondrial particles. A kinetic model based on the idea of activation of the ——— induced by electron transfer (Saks et al.) (283) 42
- Retinal  
Studies on the insect visual pigment sensitive to ultraviolet light: ——— as the chromophoric group (Paulsen, Schwemer) (283) 520
- Rhodospseudomonas spheroides*  
Effect of diaminodurene on the delayed light and the carotenoid band shift in ——— (Sherman) (283) 67
- Rhodospseudomonas spheroides*  
Proton uptake and quenching of bacteriochlorophyll fluorescence in ——— (Sherman, Cohen) (283) 54
- Rhodospseudomonas spheroides*  
Relations between pigments and proteins in the photosynthetic membranes of ——— (Clayton, Clayton) (283) 492
- Rhodospseudomonas spheroides*  
Some properties of the ATPase from chromatophores of ——— and its structural relationship to the bacteriochlorophyll proteins (Reed Raveed) (283) 79
- Rhodospseudomonas spheroides*  
Specificity of the transhydrogenase factor for chromatophores of ——— and *Rhodospirillum rubrum* (Konings, Guillory) (283) 334
- Rhodospseudomonas spheroides*  
Thin-layer chromatography of pigments from reaction centre particles of ——— (Beugeling et al.) (283) 328

- Rhodospirillum rubrum*  
Specificity of the transhydrogenase factor for chromatophores of *Rhodopseudomonas spheroides* and ——— (Konings, Guillory) (283) 334
- Ribulose 1,5-diphosphate carboxylase  
Role of the reductive carboxylic acid cycle in a photosynthetic bacterium lacking ——— (Buchanan et al.) (283) 136
- Scenedesmus obliquus*  
Light emission from the ——— wild type, mutant 8, and mutant 11 strains, measured under steady-state conditions between 4 nanoseconds and 10 seconds (Haug et al.) (283) 92
- Shrinkage  
Equivalent pore radius of intact and damaged mitochondria and the mechanism of active ——— (Massari, Azzone) (283) 23
- Spinach  
Intracellular location of nitrate reductase and nitrite reductase. I. ——— and tobacco leaves (Dalling et al.) (283) 505
- Subchloroplast fragment  
Photochemical properties of a Photosystem II ——— (Boardman) (283) 469
- Submitochondrial particles  
Some peculiarities of the steady-state kinetics of electron transfer in ———. A kinetic model based on the idea of activation of the respiratory chain induced by electron transfer (Saks et al.) (283) 42
- Tentoxin  
Inhibition of photophosphorylation by ———, a cyclic tetrapeptide (Arntzen) (283) 539
- Tobacco  
Intracellular location of nitrate reductase and nitrite reductase. I. Spinach and ——— leaves (Dalling et al.) (283) 505
- Transhydrogenase  
Specificity of the ——— factor for chromatophores of *Rhodopseudomonas spheroides* and *Rhodospirillum rubrum* (Konings, Guillory) (283) 334
- Transport  
——— of glutamate in rat-liver mitochondria (Meijer et al.) (283) 421
- Ubiquinone-6  
Influence of various proton donors on the redox properties of ——— in organic medium (Cauquis, Marbach) (283) 239
- Wheat  
Intracellular location of nitrate reductase and nitrite reductase. II. ——— roots (Dalling et al.) (283) 513
- Yeast  
Oxidative phosphorylation in ———. X. Phosphorylation ability of mutants deficient in cytochromes a and b (Šubík et al.) (283) 146

## ERRATA

BIOCHIMICA ET BIOPHYSICA ACTA, Vol. **245** (1971)

p. 431, Table I, the figures in the second, third and fourth columns should be divided by 5; the table should, therefore, read as follows:

I	5.6	1.2	7.8	2.4-2.8
II	2.2	0.5	3.4	2.4-2.8
III	7.2	2.1	13.2	2.4-2.8

BIOCHIMICA ET BIOPHYSICA ACTA, Vol. **275** (1972)

p. 213, line 3 of the text should read: "The data fitted with a model of the form presented in Eqn 5, in which..."
