Conversion of coupling factor 1 of *Rhodospirillum rubrum* from a Ca^{2+} -ATPase ... (BBA 42830)

Birgitta Norling, Åke Strid and Pål Nyrén

p. 124, left-hand column, line 4 should read:

tergents, in combination with the anion HCO_3^- ,

p. 125, left-hand column, line 4 should read:

maximal activity is obtained at 10 mM NaHCO_3

p. 127, right-hand column, line 11 should read:

Rhodospirillum rubrum chromatophores [18]

p. 127, right-hand column, line 16 should read:

mM [30] in both cases, although higher con-

p. 128, left-hand column, line 24 should read:

Mg^{2+} -ATP at similar rates [18]. Also in the mem-

p. 129, right-hand column, please add:

30 Vázquez-Laslop, N. and Dreyfus, G. (1986) J. Biol. Chem. 261, 7807–7810.
