SUBJECT INDEX

- N-Acetyl-D-galactosamine
 Specific inhibition by — of the interaction between soybean agglutinin and animal cell surfaces (Lis et al.) (211) 582
 Active sugar transport
 — in renal cortex cells: The electrolyte requirement (Kleinzeller) (211) 277
 Adenyl cyclase
 Hormone action at the membrane level. I. Properties of — in isolated plasma membranes of rat liver (Ray et al.) (211) 20
 Agglutinin
 Specific inhibition by N-acetyl-D-galactosamine of the interaction between soybean — and animal cell surfaces (Lis et al.) (211) 582
 Amino acid permeability
 — of pea chloroplasts as measured by osmotically determined reflection coefficients (Nobel, Wang) (211) 79
 Amino acid transport
 — by isolated mammalian renal tubules. III. Binding of L-proline by proximal tubule membranes (Hillman, Rosenberg) (211) 318
 Amino acid transport
 — in *Neurospora crassa*. III. Acidic amino acid transport (Pall) (211) 513
 Amino acid uptake
 Cyclic AMP stimulation of — in bone and kidney (Phang et al.) (211) 605
 Anaesthetics
 Effect of — (chlorpromazine, ethanol) on erythrocyte permeability to water (Seeman et al.) (211) 365
 Anaesthetics
 Phospholipid model membranes: Antagonistic effects of Ca^{2+} and local — on the permeability of phosphatidylserine vesicles (Papahadjopoulos) (211) 467
 Anion permeability
 — of mammalian red blood cells: Possible relation to membrane phospholipid patterns (Deuticke, Gruber) (211) 369
 ATPase
 Mg^{2+} -dependent, ($\text{Na}^+ + \text{K}^+$)-stimulated — of human platelets. Properties and inhibition by ADP (Moake et al.) (211) 337
 ATPase
 Studies on plasma membranes. XII. Fractionation of the — of deoxycholate-solubilized rat liver and hepatoma plasma membranes and the morphological appearance of the preparations (Emmelot et al.) (211) 43
 Bilayers
 Valinomycin-induced permeation of $^{86}\text{Rb}^+$ of liposomes with varying composition through the — (De Gier et al.) (211) 373
 Bilayer membranes
 Ionic permeative properties of lipid — (Simons, Taloni) (211) 448
 Bilayer membranes
 Kinetics of carrier-mediated ion transport across lipid — (Läuger, Stark) (211) 458
 Bile salts
 Effect of — on transport across brush border of rabbit ileum (Frizzell, Schultz) (211) 589
 Biogenic amine transport
 Mechanisms of — and storage. IV. Relationship between K^+ and the Na^+ requirement for transport and storage of 5-hydroxytryptamine and norepinephrine in synaptosomes (Bogdanski et al.) (211) 521
 Bladder
 Comparison of rates elution of $^{24}\text{Na}^+$ from the mucosal and serosal sides of the toad — (Drane, Vanatta) (211) 56
 Bladder
 Compartmentation and exchange of potassium in the toad — (Kallus, Vanatta) (211) 61
 Bladder
 Temperature dependence of Na^+ transport in the isolated toad — (Porter) (211) 487
 Bladder mucosal cells
 p-Nitrophenylphosphatase activity in the microsomal fraction of turtle — (Shamoo et al.) (211) 565
 Brush border
 Effect of bile salts on transport across

- of rabbit ileum (Frizzell, Schultz) (211) 589
- Brush border
Fructose influx across the —— of rabbit ileum (Schultz, Strecker) (211) 586
- Carbohydrates
Relative permability of lysosomes from *Tetrahymena pyriformis* to ——, lactate and the cryoprotective nonelectrolytes glycerol and dimethyl sulphoxide (Lee) (211) 550
- Cell communication
Epithelial monolayers: A study object for —— (Siegenbeek van Heukelom et al.) (211) 98
- Cetyltrimethylammonium bromide
Transport of β -galactosides across the membrane of permeaseless *Escherichia coli* ML35 cells after treatment with —— (Ulitzur) (211) 533
- Chloride pumping
Ion and water transport in Limonium. VI. The induction of —— (Shachar-Hill, Hill) (211) 313
- Chlorophyll membranes
Fluorescence of thin —— in aqueous phase (Alamuti, Luger) (211) 362
- Chloroplasts
Amino acid permeability of pea —— as measured by osmotically determined reflection coefficients (Nobel, Wang) (211) 79
- Chlorpromazine,
Effect of anaesthetics (——, ethanol) on erythrocyte permeability to water (Seeman et al.) (211) 365
- Cholesterol monolayers
Effect of KMnO_4 on lecithin and —— (Shah) (211) 358
- Cobaltodihistidine
Nonequilibrium-facilitated diffusion of oxygen through membranes of aqueous —— (Bassett, Schultz) (211) 194
- Compartmentation
—— and exchange of potassium in the toad bladder (Kallus, Vanatta) (211) 61
- Configuration of alanine
Gas chromatography determination of the —— and serine in staphylococcal cell walls (Gil-Av et al.) (211) 101
- Configuration of serine
Gas chromatography determination of the —— and alanine in staphylococcal cell walls (Gil-Av et al.) (211) 101
- Cyclic AMP stimulation
—— of amino acid uptake in bone and kidney (Phang et al.) (211) 605
- Deoxycytidine transport
Effects of persantin on —— by murine leukemia cells (Kessel, Hall) (211) 88
- Diffusion
Facilitated —— in human erythrocytes (Hunter) (211) 216
- Diffusion
Nonequilibrium-facilitated —— of oxygen through membranes of aqueous cobaltodihistidine (Bassett, Schultz) (211) 194
- Dimethyl sulphoxide
Asymmetry of the yeast cell membrane with respect to influx and efflux of —— (De Bruijne, Van Steveninck) (211) 555
- Dimethyl sulphoxide
Relative permeability of lysosomes from *Tetrahymena pyriformis* to carbohydrates, lactate and the cryoprotective nonelectrolytes glycerol and —— (Lee) (211) 550
- Efflux
Asymmetry of the yeast cell membrane with respect to influx and —— of dimethylsulphoxide (D Bruijne, Van Steveninck) (211) 555
- Electrical potential
Alanine and glucose effects on the intracellular —— of rabbit ileum (Rose, Schultz) (211) 376
- Electrolyte
Active sugar transport in renal cortex cells: The —— requirement (Kleinzeller) (211) 277
- Electron micrographs
Structure of lysolecithin-water phases (negative staining and optical diffraction analysis of the ——) (Junger et al.) (211) 381
- Elution
Comparison of rates of —— of $^{24}\text{Na}^+$ from the mucosal and serosal sides of the toad bladder (Drane, Vanatta) (211) 56
- Endoplasmic reticulum
Isolation and characterization of a membrane protein component from rat liver —— (Kaplan) (211) 396
- Epinephrine
Hormone action at the membrane level. II. The binding of —— and glucagon to the rat liver plasma membrane (Tomasi et al.) (211) 31
- Epithelial monolayers
——: A study object for cell communication (Siegenbeek van Heukelom et al.) (211) 98
- Erythrocytes
Facilitated diffusion in human —— (Hunter) (112) 216
- Erythrocyte membrane proteins
—— - their study using aqueous pyridine solutions (Blumenfeld et al.) (211) 109
- Ethacrynic acid
Sensitivities of $(\text{Na}^+ - \text{K}^+) - \text{ATPase}$ and Na^+ extrusion mechanisms to ouabain and —— in the cortex of the guinea-pig kidney (Proverbio et al.) (211) 327
- Ethanol
Effect of anaesthetics (chlorpromazine, ——) on erythrocyte permeability to water (Seeman et al.) (211) 365
- Exchange of potassium
Compartmentation and —— in the toad bladder (Kallus, Vanatta) (211) 61

- Extracellular space
Studies on intestinal fluid transport. I. Estimation of the ——— of everted sacs of rat small intestine (Jackson et al.) (211) 425
- Facilitated diffusion
——— in human erythrocytes (Hunter) (211) 216
- Facilitated diffusion
Nonequilibrium ——— of oxygen through membranes of aqueous cobaltodihistidine (Bassett, Schultz) (211) 194
- P-Filament
Solubilization of the factor required for polymerization of flagellin into ——— (Kagawa) (211) 417
- Flagellin
Solubilization of the factor required for polymerization of ——— into P-filament (Kagawa) (211) 417
- Fluorescence
——— of thin chlorophyll membranes in aqueous phase (Alamutti, Langer) (211) 362
- 1-Fluoro-2,4-dinitrobenzene
Influence of analogues of ——— on the kinetics of irreversible inhibition of sugar transport in the human erythrocyte (Shimin, Stein) (211) 308
- Fructose influx
——— across the brush border of rabbit ileum (Schultz, Strecker) (211) 586
- Galactose transport system
Dissociation of a ——— by warm-water treatment (Rogers) (211) 255
- β -Galactosides
Transport of ——— across the membrane of permeaseless *Escherichia coli* ML 35 cells after treatment with cetyltrimethylammonium (Ulitzur) (211) 533
- Gas chromatographic determination
——— of the configuration of alanine and serine in staphylococcal cell walls (Gil-Av et al.) (211) 101
- Glucagon
Hormone action at the membrane level. II. The binding of epinephrine and ——— to the rat liver plasma membrane (Tomasi et al.) (211) 31
- Glucose transport
Stimulating effect of hyperosmolarity on ——— in adipocytes and muscle cells (Clausen et al.) (211) 233
- Glucose-6-phosphate
Studies on plasma membranes. XI. Inorganic pyrophosphatase, PP_i -glucose phosphotransferase and ——— in plasma membranes and microsomes isolated from rat and mouse livers and hepatomas (Emmelot, Bos) (211) 169
- Glycerol
Relative permeability of lysosomes from *Tetrahymena pyriformis* to carbohydrates, lactate and the cryoprotective nonelectrolytes ——— and dimethyl sulphoxide (Lee) (211) 550
- Glycoproteins
——— of mouse liver smooth microsomal and plasma membrane fractions (Evans) (211) 578
- Golgi-rich fraction
Isolation of a ——— from rat liver (Leelavathi et al.) (211) 124
- Hormone action
——— at the membrane level. I. Properties of adenylyl cyclase in isolated plasma membranes of rat liver (Ray et al.) (211) 20
- Hormone action
——— at the membrane level. II. The binding of epinephrine and glucagon to the rat liver plasma membrane (Tomasi et al.) (211) 31
- Hydrocarbon chains
Influence of pH and temperature on the limited rotational freedom of the structured water and lipid ——— of natural membranes (Cerbon) (211) 389
- Hydrophilic
Involvement of hydrophobic and ——— groups of phospholipids in membrane formation (Chuang et al.) (211) 599
- Hydrophobic
Involvement of ——— and hydrophilic groups of phospholipids in membrane formation (Chuang et al.) (211) 599
- 5-Hydroxytryptamine
Mechanisms of biogenic amine transport and storage. IV. Relationship between K^+ and the Na^+ requirement for transport and storage of ——— and norepinephrine in synaptosomes (Bogdanski et al.) (211) 521
- Hyperosmolarity
Stimulating effect of ——— on glucose transport in adipocytes and muscle cells (Clausen et al.) (211) 233
- Immunoelectrophoresis
Identification of water-insoluble membrane proteins by ——— in a solubilizing urea-Triton solvent (Demus, Mehl) (211) 148
- Influx
Asymmetry of the yeast cell membrane with respect to ——— and efflux of dimethylsulphoxide (De Bruijne, Van Steveninck) (211) 555
- Influx
Fructose ——— across the brush border of rabbit ileum (Schultz, Strecker) (211) 586
- Infrared spectroscopy
——— of *Micrococcus lysodeikticus* membranes and membrane fractions (Green, Salton) (211) 139
- Infrared spectroscopic
——— measurements of phosphatidyl ethanolamine-water liquid crystals (Bulkin, Krishnamachari) (211) 592
- Intestine
Transport of 5-thio-D-glucose in hamster small ——— (Critchley et al.) (211) 244

- Intestinal fluid transport
 Studies on ———. I. Estimation of the extracellular space of everted sacs of rat small intestine (Jackson et al.) (211) 425
- Intestinal fluid transport
 Studies on ———. II. The location of fluid accumulated in the wall of rat jejunum during incubation in vitro (Jackson, Cassidy) (211) 436
- Ion distribution
 Effect of pH on sugar transport and ——— in kidney cortex cells (Kleinzeller et al.) (211) 293
- Ion transport
 Kinetics of carrier-mediated ——— across lipid bilayer membranes (Läuger, Stark) (211) 458
- Ion transport
 Water and ——— in Limonium. VI. The induction of chloride pumping (Shachar-Hill, Hill) (211) 313
- Ionic permeative properties
 ——— of lipid bilayer membranes (Simons, Taloni) (211) 448
- Lactate
 Relative permeability of lysosomes from *Tetrahymena pyriformis* to carbohydrates, ——— and the cryoprotective nonelectrolytes glycerol and dimethyl sulphoxide (Lee) (211) 550
- Lecithin monolayers
 Effect of KMnO_4 on cholesterol and ——— (Shah) (211) 358
- Lipid bilayer membranes
 Ionic permeative properties of ——— (Simons, Taloni) (211) 448
- Lipid bilayer membranes
 Kinetics of carrier-mediated ion transport across ——— (Läuger, Stark) (211) 458
- Lipid composition
 ——— of bovine retinal outer segment fragments (Nielsen et al.) (211) 10
- Lipid hydrocarbon chains
 Influence of pH and temperature on the limited rotational freedom of the structured water and ——— of natural membranes (Cerbón) (211) 389
- Lipid-membrane small molecule interactions
 ——— and the puncturing theory of olfaction (Cherry et al.) (211) 409
- Liposomes
 Valinomycin-induced permeation of $^{86}\text{Rb}^+$ of ——— with varying composition through the bilayers (De Gier et al.) (211) 373
- Lysolipid-water phases
 Structure of ——— (negative staining and optical diffraction analysis of the electron micrographs) (Junger et al.) (211) 381
- Lysosomes
 Relative permeability of ——— from *Tetrahymena pyriformis* to carbohydrates, lactate and the cryoprotective nonelectrolytes glycerol and dimethyl sulphoxide (Lee) (211) 550
- Magnesium-dependent, $(\text{Na}^+ + \text{K}^+)$ -stimulated ATPase
 ——— of human platelets. Properties and inhibition by ADP (Moake et al.) (211) 337
- Membranes
 Amino acid transport by isolated mammalian renal tubules. III. Binding of L-proline by proximal tubule ——— (Hillman, Rosenberg) (211) 318
- Membrane
 Asymmetry of the yeast cell ——— with respect to influx and efflux of dimethylsulphoxide (De Bruijne, Van Steveninck) (211) 555
- Membrane
 Cation repair of toluene-treated *Escherichia coli* ML35 cells and the transport of O-nitrophenyl-D- β -pyranoside-galactoside across the repaired ——— (Ulitzur) (211) 542.
- Membranes
 Fluorescence of thin chlorophyll ——— in aqueous phase (Alamuti, Läuger) (211) 362
- Membrane
 Glycoproteins of mouse liver smooth microsomal and plasma ——— fractions (Evans) (211) 578
- Membrane
 Hormone action at the ——— level. I. Properties of adenylyl cyclase in isolated plasma membranes of rat liver (Ray et al.) (211) 20
- Membrane
 Hormone action at the ——— level. II. The binding of epinephrine and glucagon to the rat liver plasma membrane (Tomasi et al.) (211) 31
- Membranes
 Influence of pH and temperature on the limited rotational freedom of the structured water and lipid hydrocarbon chains of natural ——— (Cerbón) (211) 389
- Membranes
 Infrared spectroscopy of *Micrococcus lysodeikticus* ——— and membrane fractions (Green, Salton) (211) 139
- Membranes
 Ionic permeative properties of lipid bilayer ——— (Simons, Taloni) (211) 448
- Membranes
 Kinetics of carrier-mediated ion transport across lipid bilayer ——— (Läuger, Stark) (211) 458
- Membrane
 Measurement of the permeability coefficient of $^{22}\text{Na}^+$ through a synthetic phospholipid-protein ——— (Castleden, Fleming) (211) 478
- Membranes
 Model for sugar transport across red cell ——— without carriers (Naftalin) (211) 65
- Membranes
 Molecular weight of the major protein component from mitochondrial ——— (Curtis) (211) 575

- Membranes
Nonequilibrium-facilitated diffusion of oxygen through ——— of aqueous cobalto-dihistidine (Bassett, Schultz) (211) 194
- Membrane
Permeability of the mitochondrial inner ——— to sucrose (Gamble, Jr., Garlid) (211) 223
- Membranes
Phospholipid model ———: Antagonistic effects of Ca^{2+} and local anaesthetics on the permeability of phosphatidylserine vesicles (Papahadjopoulos) (211) 467
- Membrane
Small angle X-ray diffraction of myelin ———: Lack of effect of deuterium oxide on myelin (Akers, Parsons) (211) 95
- Membrane
Small molecule lipid- ——— interactions and the puncturing theory of olfaction (Cherry et al.) (211) 409
- Membranes
Studies on plasma membranes. XI. Inorganic pyrophosphatase, PP_i -glucose phosphotransferase and glucose-6-phosphate in plasma ——— and microsomes isolated from rat and mouse livers and hepatomas (Emmelot, Bos) (211) 169
- Membranes
Studies on plasma membranes. XII. Fractionation of the ATPase of deoxycholate-solubilized rat liver and hepatoma plasma membranes and the morphological appearance of the preparations (Emmelot et al.) (211) 43
- Membrane
Transport of β -galactosides across the membrane of permeaseless *Escherichia coli* ML35 cells after treatment with cetyltrimethylammonium bromide (Ulitzur) (211) 533
- Membrane formation
Involvement of hydrophobic and hydrophilic groups of phospholipids in ——— (Chuang et al.) (211) 599
- Membrane phospholipid
Anion permeability of mammalian red blood cells: Possible relation to ——— patterns (Deuticke, Gruber) (211) 369
- Membrane proteins
Erythrocyte ——— their study using aqueous pyridine solutions (Blumenfeld et al.) (211) 109
- Membrane proteins
Identification of water-insoluble ——— by immunoelectrophoresis in a solubilizing urea-Triton solvent (Demus, Mehl) (211) 148
- Membrane protein component
Isolation and characterization of a ——— from rat liver endoplasmic reticulum (Kaplan) (211) 396
- Membrane systems
Reaction rate profiles in ——— (Viadhyathan, Seshadri) (211) 1
- Micrococcus lysodeikticus* membranes
Infrared spectroscopy of ——— and membrane fractions (Green, Salton) (211) 139
- Microsomes
Studies on plasma membranes. XI. Inorganic pyrophosphatase, PP_i -glucose phosphotransferase and glucose-6-phosphate in plasma membranes and ——— isolated from rat and mouse livers and hepatomas (Emmelot, Bos) (211) 169
- Microsomal fraction
p-Nitrophenylphosphatase activity in the ——— of turtle bladder mucosal cells (Shamoo et al.) (211) 565
- Microsomal membrane
Glycoproteins of mouse liver smooth plasma and ——— fractions (Evans) (211) 578
- Mitochondrial
Permeability of the ——— inner membrane to sucrose (Gamble, Jr., Garlid) (211) 223
- Mitochondrial membranes
Molecular weight of the major protein component from ——— (Curtis) (211) 575
- Model membranes
Phospholipid ———: III. Antagonistic effects of Ca^{2+} and local anaesthetics on the permeability of phosphatidylserine vesicles (Papahadjopoulos) (211) 467
- Molecular weight
—— of the major protein component from mitochondrial membranes (Curtis) (211) 575
- Monolayers
Effect of KMnO_4 on lecithin and cholesterol ——— (Shah) (211) 358
- Monolayers
Epithelial ———: A study object for cell communication (Siegenbeek van Heulekom et al.) (211) 98
- Mucosal
Comparison of rates elution of $^{24}\text{Na}^+$ from the ——— and serosal sides of the toad bladder (Drane, Vanatta) (211) 56
- Myelin
Small angle X-ray diffraction of myelin membrane: Lack of effect of deuterium oxide on ——— (Akers, Parsons) (211) 95
- p-Nitrophenyl phosphatase activity
—— in the microsomal fraction of turtle bladder mucosal cells (Shamoo et al.) (211) 565
- O-Nitrophenyl-D- β -pyranoside-galactoside
Cation repair of toluene-treated *Escherichia coli* ML35 cells and the transport of ——— across the repaired membrane (Ulitzur) (211) 542
- Norepinephrine
Mechanisms of biogenic amine transport and storage. IV. Relationship between K^+ and the Na^+ requirement for the transport and storage of 5-hydroxytryptamine and ——— in synaptosomes (Bogdanski et al.) (211)

- Nucleotide phosphohydrolase
 ——— Activity of chick embryo fibroblasts (Perdue) (211) 184
- Olfaction
 Small molecule lipid-membrane interactions and the puncturing theory of ——— (Cherry et al.) (211) 409
- Optical diffraction analysis
 Structure of lysolecithin-water phases (negative staining and ——— of the electron micrographs) (Junger et al.) (211) 381
- Osmotically
 Amino acid permeability of pea chloroplasts as measured by ——— determined reflection coefficients (Nobel, Wang) (211) 79
- Ouabain
 Sensitivities of $(\text{Na}^+ - \text{K}^+)\text{-ATPase}$ and Na^+ extrusion mechanisms to ——— and ethacrynic acid in the cortex of the guinea pig kidney (Proverbio et al.) (211) 327
- Oxygen
 Nonequilibrium-facilitated diffusion of ——— through membranes of aqueous cobaltodihistidine (Bassett, Schultz) (211) 194
- Permeability
 Amino acid ——— of pea chloroplasts as measured by osmotically determined reflection coefficients (Nobel, Wang) (211) 79
- Permeability
 Effect of anaesthetics (chlorpromazine, ethanol) on erythrocyte ——— to water (Seeman et al.) (211) 365
- Permeability
 Inhibition of water and solute ——— in human red cells (Macey and Farmer) (211) 104
- Permeability
 ——— of the mitochondrial inner membrane to sucrose (Gamble, Jr., Garlid) (211) 223
- Permeability
 Phospholipid model membranes: Antagonistic effects of Ca^{2+} and local anaesthetics on the permeability of phosphatidylserine vesicles (Papahadjopoulos) (211) 467
- Permeability
 Relative ——— of lysosomes from *Tetrahymena pyriformis* to carbohydrates, lactate and the cryoprotective nonelectrolytes glycerol and dimethyl sulphoxide (Lee) (211) 550
- Permeability coefficient
 Measurement of the ——— of $^{22}\text{Na}^+$ through a synthetic phospholipid-protein membrane (Castleden, Fleming) (211) 478
- Permeation
 Valinomycin-induced ——— of $^{86}\text{Rb}^+$ of liposomes with varying composition through the bilayers (De Gier et al.) (211) 373
- Permeative properties
 Ionic ——— of lipid bilayer membranes (Simons, Taloni) (211) 448
- Persantin
 Effects of ——— on deoxycytidine transport by murine leukemia cells (Kessel, Hall) (211) 88
- Phosphate-binding protein
 ——— of *Escherichia coli* (Medveczky, Rosenberg) (211) 158
- Phosphatidyl ethanolamine-water liquid crystals
 Infrared spectroscopic measurements of ——— (Bulkin, Krishnamachari) (211) 592
- Phosphatidylserine vesicles
 Phospholipid model membranes: Antagonistic effects of Ca^{2+} and local anaesthetics on the permeability of ——— (Papahadjopoulos) (211) 467
- Phospholipids
 Involvement of hydrophobic and hydrophylic groups of ——— in membrane formation (Chuang et al.) (211) 599
- Phospholipid model membranes
 ———: III. Antagonistic effects of Ca^{2+} and local anaesthetics on the permeability of phosphatidylserine vesicles (Papahadjopoulos) (211) 467
- Phospholipid-protein membrane
 Measurement of the permeability coefficient of $^{22}\text{Na}^+$ through a synthetic ——— (Castleden, Fleming) (211) 478
- Plasma membrane
 Glycoproteins of mouse liver smooth microsomal and ——— fractions (Evans) (211) 578
- Plasma membranes
 Studies on ———. XI. Inorganic pyrophosphatase, PP_i -glucose phosphotransferase and glucose-6-phosphate in plasma membranes and microsomes isolated from rat and mouse livers and hepatomas (Emmelot, Bos) (211) 169
- Plasma membranes
 Studies on ———. XII. Fractionation of the ATPase of deoxycholate-solubilized rat liver and hepatoma plasma membranes and the morphological appearance of the preparations (Emmelot et al.) (211) 43
- Polymerization
 Solubilization of the factor required for ——— of flagellin into P-filament (Kagawa) (211) 417
- Potassium transport
 Net ——— in *Neurospora*. Properties of a transport mutant (Slayman) (211) 502
- PP_i -glucose phosphotransferase
 Studies on plasma membranes. XI. Inorganic pyrophosphatase, ——— and glucose-6-phosphate in plasma membranes and microsomes isolated from rat and mouse livers and hepatomas (Emmelot, Bos) (211) 169
- L-Proline
 Amino acid transport by isolated mammalian renal tubules. III. Binding of ——— by proximal tubule membranes (Hillman, Rosenberg) (211) 318

- Proteins**
 Erythrocyte membrane ———— their study using aqueous pyridine solutions (Blumenfeld et al.) (211) 109
- Proteins**
 Identification of water-insoluble membrane ———— by immunoelectrophoresis in a solubilizing urea-Triton solvent (Demus, Mehl) (211) 148
- Protein**
 Phosphate-binding ———— of *Escherichia coli* (Medveczky, Rosenberg) (211) 158
- Protein component**
 Isolation and characterization of a membrane ———— from rat liver endoplasmic reticulum (Kaplan) (211) 396
- Pyridine solutions**
 Erythrocyte membrane proteins — their study using aqueous ———— (Blumenfeld et al.) (211) 109
- Pyrophosphatase**

- Solute permeability**
 Inhibition of water and ———— in human red cells (Macey and Farmer) (211) 104
- Structured water**
 Influence of pH and temperature on the limited rotational freedom of the ———— and lipid hydrocarbon chains of natural membranes (Cerbón) (211) 389
- Subcellular distribution**
 ———— of thiamine pyrophosphatase in rat cerebral cortex (Seijo et al.) (211) 595
- Sugar carrier**
 Studies on the ———— in skeletal muscle (Ilse, Ong) (211) 602
- Sugar transport**
 Effect of pH on ———— and ion distribution in kidney cortex cells (Kleinzeller et al.) (211) 293
- Sugar Transport**
 Influence of analogues of 1-fluoro-2,4-dinitrobenzene on the kinetics of irreversible inhibition of ———— in the human erythrocyte (Shimmin, Stein) (211) 308
- Sugar transport**
 Model for ———— across red cell membranes without carriers (Naftalin) (211) 65
- Sugar Transport**
 Specificity of the active ———— in kidney cortex cells: (Kleinzeller) (211) 264
- Thiamine pyrophosphatase**
 Subcellular distribution of ———— in rat cerebral cortex (Seijo et al.) (211) 595
- 5-Thio-D-glucose**
 Transport of ———— in hamster small intestine (Critchley et al.) (211) 244
- α -Tocopherol films**
 Thin ———— separating two aqueous phases (Seufert et al.) (211) 356
- Toluene-treated *Escherichia coli***
 Cation repair of ———— ML35 cells and the transport of O-nitrophenyl-D- β -pyranoside-galactoside across the repaired membrane (Ulitzur) (211) 542
- Transport**
 Active sugar ———— in renal cortex cells: The electrolyte requirement (Kleinzeller) (211) 277
- Transport**
 Amino acid ———— by isolated mammalian renal tubules. III. Binding of L-proline by proximal tubule membranes (Hillman, Rosenberg) (211) 318
- Transport**
 Amino acid ———— in *Neurospora crassa*. III. Acidic amino acid transport (Pall) (211) 513
- Transport**
 Cation repair of toluene-treated *Escherichia coli* ML35 cells and the ———— of O-nitrophenyl-D- β -pyranoside-galactoside across the repaired membrane (Ulitzur) (211) 542

- Transport
 Effect of bile salts on ——— across brush border of rabbit ileum (Frizzell) (211) 589
- Transport
 Effects of persantin on deoxycytidine ——— by murine leukemia cells (Kessel, Hall) (211) 88
- Transport
 ——— of β -galactosides across the membrane of permeaseless *Escherichia coli* ML 35 cells after treatment with cetyltrimethylammonium bromide (Ulitur) (211) 533
- Transport
 Influence of analogues of 1-fluoro-2,4-dinitrobenzene of the kinetics of irreversible inhibition of sugar ——— in the human erythrocyte (Shimmin, Stein) (211) 308
- Transport
 Ion and water ——— in Limonium. VI. The induction of chloride pumping (Shachar-Hill, Hill) (211) 313
- Transport
 Kinetics of carrier-mediated ion ——— across lipid bilayer membranes (Läuger, Stark) (211) 458
- Transport
 Mechanisms of biogenic amine ——— and storage. IV. Relationship between K^+ and the Na^+ requirement for transport and storage of 5-hydroxytryptamine and norepinephrine in synaptosomes (Bogdanski et al.) (211) 521
- Transport
 Model for sugar ——— across red cell membranes without carriers (Naftalin) (211) 65
- Transport
 Net potassium ——— in *Neurospora*. Properties of a transport mutant (Slayman) (211) 502
- Transport
 Specificity of the active sugar ——— in kidney cortex cells (Kleinzeller) (211) 264
- Transport
 Stimulating effect of hyperosmolarity on glucose ——— in adipocytes and muscle cells (Clausen et al.) (211) 233
- Transport
 Studies on intestinal fluid ———. II. The location of fluid accumulated in the wall of rat jejunum during incubation in vitro (Jackson, Cassidy) (211) 436
- Transport
 Studies on intestinal fluid ———. I. Estimation of the extracellular space of everted sacs of rat small intestine (Jackson et al.) (211) 425
- Transport
 Temperature dependence of Na^+ ——— in the isolated toad bladder (Porter) (211) 487
- Transport
 ——— of 5-thio-D-glucose in hamster small intestine (Critchley et al.) (211) 244
- Transport system
 Dissociation of a galactose ——— by warm-water treatment (Rogers) (211) 255
- Valinomycin-induced permeation
 ——— of $^{86}Rb^+$ of liposomes with varying composition through the bilayers (De Gier et al.) (211) 373
- Warm-water treatment
 Dissociation of a galactose transport system by ——— (Rogers) (211) 255
- Water permeability
 Inhibition of solute and ——— in human red cells (Macey and Farmer) (211) 104
- Water transport
 Ion and ——— in Limonium. VI. The induction of chloride pumping (Shachar-Hill, Hill) (211) 313
- X-ray diffraction
 Small angle ——— of myelin membrane: Lack of effect of deuterium oxide on myelin (Akers, Parsons) (211) 95
