SUBJECT INDEX

N-Acetyl-D-galactosamine-like sites Aspergillus nidulans Biochemical analysis of the cell wall of Quantitation of ——— on the surface membrane of normal and transformed mamma-- (Zonneveld) (249) 506 lian cells (Sela et al.) (249) 564 ATPase Ca²⁺-activated membrane ——: Selec-Acholeplasma laidlawii tive inhibition of ruthenium red (Watson Characterization of the mycoplasma memet al.) (249) 606 brane proteins. I. Reaggregation of solu-ATPase bilized membrane proteins of -Calcium-stimulated ——— of guinea pig (Kahane, Razin) (249) 159 placenta (Shami, Radde) (249) 345 Acholeplasma laidlawii Characterization of the mycoplasma membrane proteins. II. Solubllization and enzymic activities of ——— membrane Characteristics of sodium-— of low-K+ erythrocyte membranes stimulated by blood group L antiserum (Blostein) (249) proteins (Ne'eman et al.) (249) 169 Active transport **ATPase** Effect of reversal of sodium and potassium Properties of soluble ---- of gastric electrochemical potential gradients on the mucosa. II. Effect of HCO_3^- (Blum et al.) - of amino acids in Ehrlich ascites tumour cells (Schafer, Heinz) (249) 15 ATPase Adenyl cyclase Quantitative aspects of the interaction Studies on plasma membranes. XIV. between ouabain and sodium and potasin plasma membranes isolated from rat and sium activated ——in vitro (Akera) (249) mouse livers and hepatomas, and its hormone sensitivity (Emmelot, Bos) (249) ATPase 285 Sodium and potassium-activated -Alkaline phosphatase in isolated mucosal cells of toad bladder Studies on plasma membranes. XV. A sex (Cortas, Walser) (249) 181 difference in ---- activities of plasma Azotobacter vinelandii membranes solated from rat Inducible transport of di- and tricarboxylic (Emmelot, Bos) (249) 293 acid anions across the membrane of -All-trans-and 11-cis-retinal (Postma, Van Dam) (249) 515 Effects of —— on the erythrocyte mem-Bacterial membranes brane (Azuma, Yoshizawa) (249) 135 Interrelation of polar lipids in ----Amino acids (Minnikin et al.) (249) 651 Effect of reversal of sodium and potassium Calcium electrochemical potential gradients on the Effects of —— and lead on potassium active transport of ---- in Ehrlich ascites permeability of human crythrocyte ghosts tumour cells (Schafer, Heinz) (249) 15 (Riordan, Passow) (249) 601 Amino acid transport Calcium-activated membrane ATPase Inhibition of - in rat intestinal rings -: Selective inhibition of ruthenium by tetracycline (Ling, Morin) (249) 252 red (Watson et al.) (249) 606 Amino acid transport Calcium-stimulated ATPase Ontogeny of ——— in rat kidney. I. Effect - of guinea pig placenta (Shami, on distribution ratios and in intracellular Radde) (249) 345 metabolism of proline and glycine (Baer-Campesterol locher et al.) (249) 353 Uptake of —— in pigeon intestine Amino acid transport (Subbiah et al.) (249) 643 Ontogeny of _____ in rat kidney. II. Cell division Kinetics of uptake and effect of anoxia Segregation of membrane markers during (Baerlocher et al.), 249 (1971) 364 - in Escherichia coli. II. Segregation of Lac-permease and Mel-permease studied Arabinose transport — in AraC⁻ strains of Escherichia coli with a penicillin technique (Autissier, Kepes) B/r (Singer, Englesberg) (249) 498 (249) 611 L-Aspartic acid Cell envelope Enzymes of phospholipid metabolism: Active transport of ——— in Neurospora crassa (Wolfinbarger, Jr. et al.) (249) 63 Localization in the cytoplasmic and outer

membrane of the ——— of Escherichia coli	Erythrocyte membrane
and Salmonella typhimurium (Bell et al.)	Effects of all-trans- and 11-cis-retinal on
(249) 628	the ——— (Azmua, Yoshizawa) (249)
Cell wall	135
Biochemical analysis of the ——— of	Erythrocyte membranes
Aspergillus nidulans (Zonneveld) (249) 506	—————effect of increased cholesterol
Cerebroside-lecithin bilayers	content on permeability (Kroes, Ostwald)
Physical properties of ——— (Clowes et al.)	(249) 647
(249) 301	Erythrocyte membrane
Chloride conductance	Investigations on the existence of a specific
Regulation of sodium chloride transport:	retention of D-glucose by the human ———
Relation to ——— (Watlington) (249) 339	(Møller) (249) 96
Cholesterol	Erythrocyte membrane
Erythrocyte membranes—effect of increased	Properties of an ———————————————————————————————————
content on permeability (Kroes,	(Juliano, Rothstein) (249) 227
Ostwald) (249) 647	Erythrocyte membrane
Cytoplasmic chloride	Reactivity of the human——— to sodium
Effects of external cations on ——	trinitrobenzenesulphonate (Bonsall, Hunt)
activity in Nitella measured by means of	(249) 281
an intracellular Ag-AgCl microelectrode	Erythrocyte membrane
(Lefebvre, Gillet) (249) 556	Solute and solvent flow across mammalian
Cytoplasmic membrane	——. How to test for Onsager reciprocal
Enzymes of phospholipid metabolism:	relation (Sha'afi et al.) (249) 260
Localization in the ——— and outer mem-	Escherichia coli
brane of the cell envelope of Escherichia	Segregation of membrane markers during
coli and Salmonella typhimurium (Bell et	cell division in ——. II. Segregation of
al.) (249) 628	Lac-permease and Mel-permease studied
Di- and tricarboxylic acid	with a penicillin technique (Autissier,
Inducible transport of — — anions across	Kepes) (249) 611
the membrane of Azotobacter vinelandii	Escherichia coli
(Postma, Van Dam) (249) 515	Stopped-flow studies of salt-induced tur-
Dicoumarol	bidity changes of ——— (Matts, Knowles)
Ultrastructural and chemical alterations	(249) 583
induced by —— in Streptococcus faecalis	Fatty acid
(Santos Mota et al.) (249) 114	Effect of partition of —— between oil
Electrical potential	and micelles on its uptake by everted
Studies on transmural potentials in vitro in	intestinal sacs (Lee et al.) (249) 548
relation to intestinal absorption VI. The	Fibroblasts
effect of sugars on profiles in jeju-	Isolation and characterization of plasma
num and ileum (Lyon, Sheerin) (249) I	membrane from cultured cells. I. The
Endoplasmic reticulum	chemical composition of membrane isolated
Proteins and glycoproteins of hamster	from uninfected and oncogenic RNA virus-
kidney fibroblast (BHK21) plasma mem-	converted chick embryo — (Perdue
branes and ——— (Gahmberg) (249) 81	
branes and ——— (Gailliberg) (249) or	
Epinephrine interaction	et al.) (249) 419 Galactoside permeases
Epinephrine interaction	et al.) (249) 419 Galactoside permeases
Epinephrine interaction Hormone action at the membrane level.	et al.) (249) 419 Galactoside permeases Local and non-local interactions of fluxes
Epinephrine interaction Hormone action at the membrane level. III. ——— with the rat liver plasma	et al.) (249) 419 Galactoside permeases
Epinephrine interaction Hormone action at the membrane level. III. ——— with the rat liver plasma membrane (Dunnick, Marinetti) (249) 122	et al.) (249) 419 Galactoside permeases Local and non-local interactions of fluxes mediated by the glucose and ——— of
Epinephrine interaction Hormone action at the membrane level. III. ——— with the rat liver plasma	et al.) (249) 419 Galactoside permeases Local and non-local interactions of fluxes mediated by the glucose and ——— of Escherichia coli (Koch) (249) 197 Gastric mucosa
Epinephrine interaction Hormone action at the membrane level. III. ——— with the rat liver plasma membrane (Dunnick, Marinetti) (249) 122 Erythrocytes	et al.) (249) 419 Galactoside permeases Local and non-local interactions of fluxes mediated by the glucose and ——— of Escherichia coli (Koch) (249) 197 Gastric mucosa Properties of soluble ATPase of ———. II. Effect of HCO ₃ ⁻ (Blum et al.) (249) 101
Epinephrine interaction Hormone action at the membrane level. III. —— with the rat liver plasma membrane (Dunnick, Marinetti) (249) 122 Erythrocytes Effect of ouabain on the Ca ²⁺ -dependent increase in potassium permeability in	et al.) (249) 419 Galactoside permeases Local and non-local interactions of fluxes mediated by the glucose and ———— of Escherichia coli (Koch) (249) 197 Gastric mucosa Properties of soluble ATPase of ————. II. Effect of HCO ₃ ⁻ (Blum et al.) (249) 101
Epinephrine interaction Hormone action at the membrane level. III. —— with the rat liver plasma membrane (Dunnick, Marinetti) (249) 122 Erythrocytes Effect of ouabain on the Ca ²⁺ -dependent increase in potassium permeability in depleted guinea-pig —— (Lew) (249) 236	et al.) (249) 419 Galactoside permeases Local and non-local interactions of fluxes mediated by the glucose and ———— of Escherichia coli (Koch) (249) 197 Gastric mucosa Properties of soluble ATPase of ————. II.
Epinephrine interaction Hormone action at the membrane level. III. —— with the rat liver plasma membrane (Dunnick, Marinetti) (249) 122 Erythrocytes Effect of ouabain on the Ca ²⁺ -dependent increase in potassium permeability in depleted guinea-pig —— (Lew) (249) 236 Erythrocyte ghosts Effects of calcium and lead on potassium	et al.) (249) 419 Galactoside permeases Local and non-local interactions of fluxes mediated by the glucose and ——— of Escherichia coli (Koch) (249) 197 Gastric mucosa Properties of soluble ATPase of ———. II. Effect of HCO ₃ ⁻ (Blum et al.) (249) 101 Glucose
Epinephrine interaction Hormone action at the membrane level. a	/XXX //
Glycine	(White et al.) (249) 636
Active transport of ——— by mouse	Membranes
pancreas. Evidence against the sodium	Enzymatic characterization and lipid com-
gradient hypothesis (Lin, Johnstone) (249)	position of rat liver subcellular
144	(Colbeau et al.) (249) 462
Glycine	Membrane
Ontogeny of amino acid transport in rat	Enzymes of phospholipid metabolism: Lo-
kidney. I. Effect on distribution ratios and	calization in the cytoplasmic and outer
in intracellular metabolism of proline and	of the cell envelope of Escherichia
Galai complex	coli and Salmonella typhimurium (Bell et
Golgi complex	al.) (249) 628
Some studies on the metabolism of phos-	Membranes
pholipids in ——— from bovine and rat	Exchange of phospholipids between micro-
liver in comparison to other subcellular	somes and mitochondrial outer and inner
fractions (Van Golde et al.) (249) 318	——— (Wojtczak et al.) (249) 41 Membrane
Haemolysis	
induced by Prymnesium parvum	Hormone action at the ——————————————————————————————————
toxin. Effect of primaquine treatment (Mar-	Epinephrine interaction with the rat liver
tin et al.) (249) 69	plasma membrane (Dunnick, Marinetti)
Heavy water Membrane permeability of ——— (Rastogi	(249) 122 Membranes
	-
et al.) (249) 454 Hexosamines	Interrelation of polar lipids in bacterial ———— (Minnikin et al.) (249) 651
Effect of —— on the active transport	Membrane (Minimum et al.) (249) 051
of sugars in the hamster (Barnett et al.)	Preparation of an ouabain-binding
(249) 493	fraction from brain (Harris et al.) (249) 333
Hexose transport	Membrane markers
Properties of the ——— systems of Asper-	Segregation of ——— during cell division
gillus nidulans (Mark, Romano) (249) 216	in Escherichia coli. II. Segregation of Lac-
Intestinal absorption	permease and Mel-permease studied with
Studies on transmural potentials in vitro	a penicillin technique (Autissier, Kepes)
in relation to —— VI. The effect of	(249) 611
sugges on electrical potential profiles in	3.6 3
sugars on electrical potential profiles in	Membrane permeability
jejunum and ileum (Lyon, Sheerin) (249) 1	Membrane permeability of heavy water (Rastogi et al.) (249)
	*
jejunum and ileum (Lyon, Sheerin) (249) 1 Intestinal sacs Effect of partition of fatty acid between oil	of heavy water (Rastogi et al.) (249) 454 Membrane proteins
jejunum and ileum (Lyon, Sheerin) (249) 1 Intestinal sacs Effect of partition of fatty acid between oil and micelles on its uptake by everted————	
jejunum and ileum (Lyon, Sheerin) (249) 1 Intestinal sacs Effect of partition of fatty acid between oil and micelles on its uptake by everted———— (Lee et al.) (249) 548	454 Membrane proteins Characterization of the mycoplasma membrane proteins. I. Reaggregation of solu-
jejunum and ileum (Lyon, Sheerin) (249) 1 Intestinal sacs Effect of partition of fatty acid between oil and micelles on its uptake by everted (Lee et al.) (249) 548 Lead	of heavy water (Rastogi et al.) (249) 454 Membrane proteins Characterization of the mycoplasma membrane proteins. I. Reaggregation of solubilized ——— of Acholeplasma laidlawii
jejunum and ileum (Lyon, Sheerin) (249) 1 Intestinal sacs Effect of partition of fatty acid between oil and micelles on its uptake by everted ——— (Lee et al.) (249) 548 Lead Effects of calcium and ——— on potassium	of heavy water (Rastogi et al.) (249) 454 Membrane proteins Characterization of the mycoplasma membrane proteins. I. Reaggregation of solubilized —— of Acholeplasma laidlawii (Kahane, Razin) (249) 159
jejunum and ileum (Lyon, Sheerin) (249) 1 Intestinal sacs Effect of partition of fatty acid between oil and micelles on its uptake by everted——— (Lee et al.) (Ne'eman et al.) (249) 169 (249) 539 Phospholipids Myelin membrane Ox peripheral nerve -----. Purification Some studies on the metabolism of – and partial characterization of two basic in Golgi complex from bovine and rat liver in comparison to other subcellular fractions proteins (London) (249) 188 Nitella (Van Golde et al.) (249) 318 Effects of external cations on cytoplasmic Phospholipid metabolism chloride activity in ---- measured by Enzymes of ——: Localization in the means of an intracellular Ag-AgCl microcytoplasmic and outer membrane of the cell envelope of Escherichia coli and electrode (Lefebvre, Gillet) (249) 556 Oncogenic RNA virus Salmonella typhimurium (Bell et al.) (249) Isolation and characterization of plasma membrane from cultured cells. I. The Phospholipid-synthesizing enzymes chemical composition of membrane isolated Distribution of — in the wall and memfrom uninfected and ----- -converted brane subfractions of the envelope of chick embryo fibroblasts (Perdue et al.) Escherichia coli (White et al.) (249) 636 (249) 419 Pinocytotic vesicles Oncogenic RNA virus A rapid, simple method for isolating ---Isolation and characterization of plasma and plasma membrane of lung (Ryan, membranes from cultured cells. II. The Smith) (249) 177 chemical composition of membrane isolated Placenta from uninfected and ----- - converted Calcium-stimulated ATPase of guinea pig parenchyma-like cells (Perdue et al.) (249) - (Shami, Radde) (249) 345 Plasma membrane 435 Ouabain A rapid, simple method for isolating pino-Effect of — on the Ca²⁺-dependent cytotic vesicles and ——— of lung (Ryan, increase in potassium permeability in deple-Smith) (249) 177 ted guinea-pig erythrocytes (Lew) (249) 236 Plasma membrane Hormone action at the membrane level. Quantitative aspects of the interaction III. Epinephrine interaction with the rat between ---- and sodium and potassium - (Dunnick, Marinetti) (249) 122 activated ATPase in vitro (Akera) (249) 53 Plasma membrane Ouabain-binding membrane fraction Isolation and characterization of from cultured cells. I. The chemical com-Preparation of an ---- from brain (Harris et al.) (249) 333 position of membrane isolated from unin-Parenchyma-like cells fected and oncogenic RNA virus-converted Isolation and characterization of plasma chick embryo fibroblasts (Perdue et al.) membranes from cultured cells. II. The (249) 419 chemical composition of membrane isolated Plasma membranes from uninfected and oncogenic RNA virus-Isolation and characterization of from cultured cells. II. The chemical comconverted ——— (Perdue et al.) (249) 435 Permease position of membrane isolated from unin-Segregation of membrane markers during fected and oncogenic RNA virus-converted parenchyma-like cells (Perdue et al.) (249) cell division in Escherichia coli. II. Segregation of Lac- and Mel-permease 435 with a penicillin technique Plasma membranes studied (Autissier, Kepes) (249) 611 Proteins and glycoproteins of hamster kidney fibroblast (BHK21) --- and Phosphatase Studies on plasma membranes. XV. A sex endoplasmic reticulum (Gahmberg) (249) 81 difference in alkaline ---- activities of Plasma membranes plasma membranes isolated from rat liver Simple method for the isolation of rat liver (Emmelot, Bos) (249) 293 cell ---- in isotonic sucrose (Nigam et al.) Phosphatidylcholine micelles (249) 34 Nuclear magnetic resonance studies of the Plasma membranes interaction of water with the polar region -. XIV. Adenyl cyclase Studies on -— (Walter, Hayes) (249) 528 in plasma membranes isolated from rat and Phospholipids mouse livers and hepatomas, and its hor-Exchange of ——— between microsomes mone sensitivity (Emmelot, Bos) (249) and mitochondrial outer and inner mem-285 Plasma membranes branes (Wojtczak et al.) (249) 41 Studies on -----. XV. A sex difference in Phospholipids Monolayer characteristics of some 1,2-diaalkaline phosphatase activities of plasma cyl, 1-alkyl-2-acyl and 1,2-dialkyl membranes isolated from rat liver

(Emmelot, Bos) (249) 293

at the air -water interface (Paltauf et al.)

596 SUBJECT INDEX

Plasma membranes	group L antiserum (Blostein) (249) 623
Synaptic - from rat brain synapto-	Sodium chloride transport
somes: Isolation and partial characteriza-	Regulation of ———: Relation to chloride
tion (Cotman, Matthews) (249) 380	conductance (Watlington) (249) 339
Plasma membranes	Sodium gradient
Ultrastructural and chemical analysis of	Active transport of glycine by mouse pan-
the effect of Triton X-100 on synaptic	creas. Evidence against the —— hypo-
(Cotman et al.) (249) 406	thesis (Lin, Johnstone) (249) 144
Potassium	Sodium transport
Dependence of glutamate uptake by crab	Effects of diphenylhydantoin on ——
nerve on external sodium and	and potassium transport and the regulation
(Baker, Potashner) (249) 616	of sugar transport in muscle in vitro
Potassium	(Bihler, Sawh) (249) 240
Effect of reversal of sodium and ———	Streptococcus faecalis
electrochemical potential gradients on the	Ultrastructural and chemical alterations
active transport of amino acids in Ehrlich	induced by dicoumarol in (Santos
ascites tumour cells (Schafer, Heinz) (249)	Mota et al.) (24) 114
15	Subsynaptosomal distribution of enzymes
Potassium permeability	involved in the metabolism of lipids
Effects of calcium and lead on ——— of	(Cotman et al.) (249) 395
human erythrocyte ghosts (Riordan,	Sugars
Passow), (249) 601	Effect of hexosamines on the active trans-
Potassium permeability	port of in the hamster (Barnett et
Effect of ouabain on the Ca ²⁺ -dependent	al.) (249) 493
increase in ——— in depleted guinea-pig	Sugars
erythrocytes (Lew) (249) 236	Studies on transmural potentials in vitro
Potassium transport	in relation to intestinal absorption. VI. The
Effects of diphenylhydantoin on sodium	effect of —— on electrical potential
transport and ——— and the regulation	profiles in jejunum and ileum (Lyon,
of sugar transport in muscle in vitro	Sheerin) (249) I
(Bihler, Sawh) (249) 240	Sugar transport
Proline	Effects of diphenylhydantoin on sodium
Ontogeny of amino acid transport in rat	transport and potassium transport and the
kidney. I. Effect on distribution ratios and	regulation of in muscle in vitro
in intracellular metabolism of ——— and	(Bihler, Sawh) (249) 240
glycine (Baerlocher et al.) (249) 353	Surface membrane
Prymnesium parvum toxin	Quantitation of N-acetyl-D-galactosamine-
Haemolysis induced by ——. Effect of	like sites on the ——— of normal and
primaquine treatment (Martin et al.) (249)	transformed mammalian cells (Sela et al.)
69	(249) 564
Retinal	Synaptic plasma membranes
Effects of all-trans- and 11-cis- on	Ultrastructural and chemical analysis of
the erythrocyte membrane (Azuma,	the effect of Triton X-100 on ——
Yoshizawa) (249) 135	(Cotman et al.) (249) 406
Sodium	Synaptosomes
Dependence of glutamate uptake by crab	Synaptic plasma membranes from rat
nerve on external ——— and potassium	brain ——: Isolation and partial charac-
(Baker, Potashner) (249) 616	terization (Cotman, Matthews) (249) 380
Sodium	Tetracycline
Effect of reversal of ——— and potassium	Inhibition of amino acid transport in rat
electrochemical potential gradients on the	intestinal rings by ——— (Ling, Morin)
active transport of amino acids in Ehrlich	(249) 252
ascites tumour cells (Schafer, Heinz) (249)	Thiamine propyl disulfide
15	Transport mechanism of ——————— into human
Sodium and potassium-activated ATPase	blood cell membrane (Ikeda et al.) (249) 373
in isolated mucosal cells of toad	Transmural potentials
bladder (Cortas Walser) (249) 181	Studies on —— in vitro in relation to
Sodium and potassium-activated ATPase	intestinal absorption VI. The effect of sugars
Quantitative aspects of the interaction	on electrical potential profiles in jejunum
between ouabain and ——— in vitro	and ileum (Lyon, Sheerin) 249) I
(Akera) (249) 53	Transport of di- and tricarboxylic acid
Sodium-ATPase	Inducible —— anions across the mem-
Characteristics of ———— of low-K+ sheep	brane of Azotobacter vinelandii (Postma,
erythrocyte membrane stimulated by blood	Van Dam) (249) 515

Transport of sugars	brane to sodium ——— (Bonsall, Hunt)
Effect of hexosamines on the active ———	(249) 281
in the hamster (Barnett et al.) (249) 493	Turbidity changes
Fricarboxylic acid	Stopped-flow studies of salt-induced ———
Inducible transport of di- and ———	of Escherichia coli (Matts, Knowles) (249)
anions across the membrane of Azotobacter	583
vinelandii (Postma, Van Dam) (249) 515	Water
Trinitrobenzenesulphonate	Membrane permeability of heavy ———
Reactivity of the human erythrocyte mem-	(Rastogi et al.) (249) 454
