

SUBJECT INDEX

- Acholeplasma laidlawii
Characterization of the mycoplasma membrane proteins. III. Gel filtration and immunological characterization of ——— membrane proteins (Ne'eman et al.) (266) 255
- Adenyl cyclase
Characterization of the ——— of rat kidney plasma membranes (Forte) (266) 524
- Agglutinin
Interaction of Ricinus communis ——— with normal and tumor cell surfaces (Nicolson, Blaunstein) (266) 543
- Alcohols
Effects of ——— on lipid bilayers: A spin label study (Paterson et al.) (266) 597
- All-trans-retinal
Effect of temperature on the biphasic photoresponses of an ——— bimolecular lipid membrane (Kobamoto, Tien) (266) 56
- Amino acid-induced insulin release
L-Leucine and D-leucine transport into pancreatic β -cells with reference to the mechanisms of ——— (Hellman et al.) (266) 436
- Amino acids
Basis for the difference in the inhibition of the uptake of various neutral ——— by lysine in intestinal epithelial cells (Reiser, Christiansen) (266) 217
- Amino acids accumulation
Serosal ——— and hepatic lipid levels of rats fed several carbohydrates (Varnell, Chang) (266) 444
- Amino acid transport
— by rat small intestine. Galactose inhibition of transepithelial net transport as a result of stimulation of bidirectional efflux from the epithelium (Munck) (266) 639
- Amino acid transport
Regulation of ——— in chick embryo heart cells. I. Adaptive system of mediation for neutral amino acids (Gazzola et al.) (266) 407
- Amino acid transport
Selective inhibition by heat of ——— in slices of mouse brain (Yamaguchi et al.) (266) 422
- Anaesthetics
Interaction of cations and local ——— with isolated sarcolemma (Madeira, Carvalho) (266) 670
- Arabinosyl-6-mercaptopurine uptake
The determination of the ——— by L1210 cells (Chao, Kimball) (266) 721
- ATPase
Concanavalin A stimulation of rat lymphocyte ——— (Novogrodsky) (266) 343
- ATPase
Divalent cations as allosteric modifiers of the sodium-potassium-dependent ——— (Robinson) (266) 1
- ATPase
Effect of lipoxidation on synaptosomal sodium, potassium-stimulated ——— isolated from the cerebral cortex of squirrel monkey (Sun) (266) 350
- ATPase
Effects of monosaccharides on the sodium activation curve of the intestinal sodium-potassium dependent ——— (Dettmer et al.) (266) 128
- ATPase
Inhibition of sodium-potassium activated ——— by the direct lytic factor of cobra venom (Naja naja) (Lankisch et al.) (266) 133
- ATPase
pH dependence of the effects of sodium, potassium and quabain on the ——— activity of NaI-treated brain microsomes with magnesium, manganese, calcium and zinc as divalent metal activators (Atkinson, Lowe) (266) 103
- ATPase
Properties of ——— of gastric mucosa. III. Distribution of HCO_3^- -stimulated ATPase in gastric mucosa (Sachs et al.) (266) 625
- ATPase
Properties of a soluble calcium- and magnesium-activated ——— released from Escherichia coli membranes (Davies, Bragg) (266) 273
- ATPase
Studies on a Ca^{2+} -dependent ——— of human erythrocyte membranes. Effects of Ca^{2+} and hydrogen ions (Wolf) (266) 361
- Bicarbonate ion-stimulated ATPase
Properties of ATPase of gastric mucosa. III. Distribution of ——— in gastric mucosa (Sachs et al.) (266) 625
- Bilayers
The effects of alcohols on lipid ——— A spin label study (Paterson et al.) (266) 597
- Bile acid transport
Ileal ——— conjugated with norleucine and lysine (Singletary et al.) (266) 238
- Bimolecular lipid-dye membranes
Photoelectric effects in ——— (Ullrich, Kuhn) (266) 584
- Bimolecular lipid membrane
Effect of temperature on the biphasic photoresponses of an all-trans-retinal ——— (Kobamoto, Tien) (266) 56
- Black lipid membranes
Valinomycin as a probe for the study of

- structural changes of ——— (Stark et al.) (266) 603
- Bladder
Effects of lithium on the permeability of an epithelial membrane, the toad urinary ——— (Bentley, Wasserman) (266) 285
- Brain microsomes
pH dependence of the effects of sodium, potassium and ouabain on the ATPase activity of NaI-treated ——— with magnesium, manganese, calcium and zinc as divalent metal activators (Atkinson, Lowe) (266) 103
- Brain proteins
Inadequacy of sodium dodecyl sulfate as a dissociative agent for ——— and glycoproteins (Katzman) (266) 269
- Brain slices
Selective inhibition by heat of amino acid transport in mouse ——— (Yamaguchi et al.) (266) 422
- Calcium- and magnesium-activated ATPase
Properties of a soluble ——— released from *Escherichia coli* membranes (Davies, Bragg) (266) 273
- Calcium binding
——— to retinal rod disk membranes (Neufeld et al.) (266) 67
- Calcium ion-dependent ATPase
Studies on a ——— of human erythrocyte membranes. Effects of Ca^{2+} and hydrogen ions (Wolf) (266) 361
- Calcium ion binding
Lipid monolayers: Surface potential of dipalmitoyllecithin with regard to ion sorption and ——— (Colacicco) (266) 313
- Cartilage
Membrane characteristics of human articular ——— (Handler-Bernich et al.) (266) 732
- Cations
Divalent ——— as allosteric modifiers of the sodium-potassium-dependent ATPase (Robinson) (266) 97
- Cations
Interaction of ——— and local anesthetics with isolated sarcolemma (Madeira, Carvalho) (266) 670
- Cell
Interaction of *Ricinus communis* agglutinin with normal and tumor ——— surfaces (Nicolson, Blaustein) (266) 543
- Cells
Determination of the uptake of arabinosyl-6-mercaptopurine by L1210 ——— (Chao, Kimball) (266) 721
- Cells
Effect of unstirred layers on the measurement of transport rates in individual ——— (Miller) (266) 85
- Cells
Isolation and characterization of plasma membrane from cultured ———. IV. The carbohydrate composition of membranes isolated from oncogenic RNA virus-converted chick embryo fibroblasts (Perdue et al.) (266) 505
- β -Cells
L-Leucine and D-leucine transport into pancreatic ——— with reference to the mechanisms of amino acid-induced insulin release (Hellman et al.) (266) 436
- Cerebral cortex
Effect of lipoxidation on synaptosomal sodium potassium-stimulated-ATPase isolated from the ——— (Sun) (266) 350
- Cholesterol
Influence of pH and ——— on the structure of phosphatidylethanolamine multibilayers (Hsia, Boggs) (266) 18
- Cholesterol
Lack of influence of membrane ——— depletion on anion and nonelectrolyte permeability of pig erythrocytes (Deuticke, Zöllner) (266) 726
- Cholesterol
Permeability properties of phospholipid membranes: Effect of ——— and temperature (Papahadjopoulos et al.) (266) 561
- Cholesterol
Properties of polyunsaturated lecithins in monolayers and liposomes and the interactions of these lecithins with ——— (Demel et al.) (266) 26
- Cobra venom
Inhibition of sodium and potassium-activated ATPase by the direct lytic factor of ——— (*Naja naja*) (Lankisch et al.) (266) 133
- Concanavalin A
——— stimulation of rat lymphocyte ATPase (Novogrodsky) (266) 343
- Diffusion
——— processes in lipid-water lamellar phases (Rigaud et al.) (266) 72
- Digitonin
Differential effects of ——— on some enzyme activities of the sodium pump (Winter) (266) 135
- Dimethylsulphoxide
Effect of glycerol, ethanol and ——— on rat liver lysosomes (Lee) (255) 50
- 2,4-Dinitrophenol
Effects of nigericin, valinomycin, and ——— on intracellular pH, glycolysis, and potassium concentration of Ehrlich ascites tumor cells (Poole et al.) (266) 463
- Dipalmitoyllecithin
Lipid monolayers: Surface potential of ——— with regard to ion sorption and Ca^{2+} binding (Colacicco) (266) 313
- Direct lytic factor
Inhibition of sodium-potassium-activated ATPase by the ——— of cobra venom (*Naja naja*) (Lankisch et al.) (266) 133
- Disaccharidase activity
——— of a membrane fraction obtained from the rabbit renal cortex (Stevenson) (266) 144

- Ehrlich ascites tumor cells
Effects of nigericin, valinomycin, and 2,4-dinitrophenol on intracellular pH, glycolysis, and potassium concentration of ——— (Poole et al.) (266) 463
- Electrolyte
Effect of pH on the water and ——— content of renal cells (Rorive et al.) (266) 376
- Epithelial cells
Basis for the difference in the inhibition of the uptake of various neutral amino acids by lysine in intestinal ——— (Reiser, Christiansen) (266) 217
- Epithelial membrane
Effects of lithium on the permeability of ———, the toad urinary bladder (Bentley, Wasserman) (266) 285
- Erythrocyte ghosts
Study of intact erythrocytes and ——— using stearic acid spin labels (Landsberger et al.) (266) 1
- Erythrocyte membrane
Simple resolution of the kinetic anomaly in the sugar exchange of different sugars across the human ——— (Eilam, Stein) (266) 161
- Erythrocyte membrane proteins
Solubilization and fractionation of human ——— (Juliano) (266) 301
- Erythrocyte membranes
Solubilization, disaggregation and chromatography of ——— (Triplett et al.) (266) 484
- Erythrocyte membranes
Studies on a Ca^{2+} -dependent ATPase of human ———. Effects of Ca^{2+} and hydrogen ions (Wolf) (266) 361
- Erythrocytes
Incubation of HK and LK sheep ——— in vitro for long periods (Kepner, Tosteson) (266) 471
- Erythrocytes
Lack of influence of membrane cholesterol depletion on anion and nonelectrolyte permeability of pig ——— (Deuticke, Zöllner) (266) 726
- Erythrocytes
Sugar transport in beef ——— (Hoss et al.) (266) 174
- Ethanol
Effect of glycerol, ——— and dimethylsulphoxide on rat liver lysosomes (Lee) (266) 50
- Fibroblasts
Isolation and characterization of plasma membrane from cultured cells. IV. The carbohydrate composition of membranes isolated from oncogenic RNA virus-converted chick embryo ——— (Perdue et al.) (266) 505
- D-Fructose transport
Active intestinal ——— (Gracey) (266) 397
- Galactose
Amino acid transport by rat small intestine. ——— inhibition of transepithelial net transport as a result of stimulation of bidirectional efflux from the epithelium (Munck) (266) 639
- Glucose
Model transport studies utilizing lecithin spherules. I. Critical evaluations of several physical models in the determination of the permeability coefficient for ——— (Chowhan et al.) (266) 320
- Glutamine
How methionine and ——— prevent inhibition of growth by methionine sulfoximine (Meins, Abrams) (266) 307
- Glycerol
Effect of ———, ethanol and dimethylsulphoxide on rat liver lysosomes (Lee) (266) 50
- Glycoproteins
Inadequacy of sodium dodecyl sulphate as a dissociative agent for brain proteins and ——— (Katzman) (266) 269
- Heart cells
Regulation of amino acid transport in chick embryo ——— I. Adaptive system of mediation for neutral amino acids (Gazzola et al.) (266) 407
- Hexose uptake
Respiratory increase and active ——— of *Chlorella vulgaris* (Decker, Tanner) (266) 661
- Hexose uptake
Unusual features of the active ——— system of *Chlorella vulgaris* (Komor et al.) (266) 649
- Hydrogen
Role of ——— and potassium ions in the transport of acidic amino acids in *Staphylococcus aureus* (Gale, Llewellyn) (266) 182
- Hydrogen ions
Studies on a Ca^{2+} -dependent ATPase of human erythrocyte membranes. Effects of Ca^{2+} and ——— (Wolf) (266) 361
- [^{14}C]Hypoxanthine accumulation
——— and metabolism by slices of rabbit renal medulla (Berndt, Miller) (266) 453
- Incorporation of Fucose
——— into HeLa cell plasma membranes during the cell cycle (Nowakowski et al.) (266) 154
- Insulin
L-Leucine and D-leucine transport into pancreatic β -cells with reference to the mechanism of amino acid-induced ——— release (Hellman et al.) (266) 436
- Lecithin
Model transport studies utilizing ——— spherules. I. Critical evaluations of several physical models in the determination of the permeability coefficient for glucose (Chowhan et al.) (266) 320
- Lecithins
Monolayer interactions of individual ——— with natural sterols (Ghosh, Tinoco) (266) 41

- Lecithins**
Properties of polyunsaturated ——— in monolayers and liposomes and the interactions of these lecithins with cholesterol (Demel et al.) (266) 26
- L-Leucine**
——— and D-leucine transport into pancreatic β -cells with reference to the mechanisms of amino acid-induced insulin release (Hellman et al.) (266) 436
- Lipid bilayers**
Effects of alcohols on ———: A spin label study (Paterson et al.) (266) 597
- Lipid composition**
——— of adult rat brain synaptosomal plasma membranes (Breckenridge et al.) (266) 695
- Lipid levels**
Serosal accumulation of amino acids and hepatic ——— of rats fed several carbohydrates (Varnell, Chang) (266) 444
- Lipid monolayers**
———: Surface potential of dipalmitoyl lecithin with regard to ion sorption and Ca^{2+} binding (Colacicco) (266) 313
- Lipid requirements**
——— of functional membrane structures as indicated by the reversible inactivations of sodium-potassium-dependent ATPase (Järnefelt) (266) 91
- Lipid-water lamellar phases**
Diffusion processes in ——— (Rigaud et al.) (266) 72
- Lithium**
Effects of ——— on the permeability of an epithelial membrane, the toad urinary bladder (Bentley, Wasserman) (266) 285
- Liposomes**
Properties of polyunsaturated lecithins in monolayers and ——— and the interactions of these lecithins with cholesterol (Demel et al.) (266) 26
- Lymphocyte ATPase**
Concanavalin A stimulation of rat ——— (Novogrodsky) (266) 343
- Lymphocyte plasma membranes**
Isolation and characterization of ——— (Ferber et al.) (266) 494
- Lysine**
Basis for the difference in the inhibition of the uptake of various neutral amino acids by ——— in intestinal epithelial cells (Reiser, Christiansen) (266) 217
- Lysine**
Ileal bile acid transport conjugated with norleucine and ——— (Singletary et al.) (266) 238
- Lysosomes**
Effect of glycerol, ethanol and dimethylsulphoxide on rat liver ——— (Lee) (266) 50
- Magnesium**
pH dependence of the effects of sodium, potassium and ouabain on the ATPase activity of NaI-treated brain microsomes with, ———, manganese, calcium and zinc as divalent metal activators (Atkinson, Lowe) (266) 103
- Manganese**
The pH-dependence of the effects of sodium, potassium and ouabain on the ATPase activity of NaI-treated brain microsomes with magnesium, ——— and zinc as divalent metal activators (Atkinson, Lowe) (266) 103
- Membrane**
Binding of ^3H -radioactive tetrodotoxin to nerve ——— preparations (Hafeman) (266) 548
- Membrane**
Disaccharidase activity of a ——— fraction obtained from the rabbit renal cortex (Stevenson) (266) 144
- Membrane**
Effect of detergents and sodium fluoride on the enzyme activities of the rat liver plasma ——— (Dunnick et al.) (266) 684
- Membrane**
——— characteristics of human articular cartilage (Handler-Bernich et al.) (266) 732
- Membrane cholesterol depletion**
Lack of influence of ——— on anion and nonelectrolyte permeability of pig erythrocytes (Deuticke, Zöllner) (266) 726
- Membranes**
Circular dichroism of biological ——— II. Plasma membranes and sarcotubular vesicles (Masotti et al.) (266) 7
- Membranes**
Isolation and characterization of plasma membrane from cultured cells. IV. The carbohydrate composition of ——— isolated from oncogenic RNA virus-converted chick embryo fibroblasts (Perdue et al.) (266) 505
- Membranes**
Lipid composition of adult rat brain synaptosomal plasma ——— (Breckenridge et al.) (266) 695
- Membranes**
Permeability properties of phospholipid ———: Effect of cholesterol and temperature (Papahadjopoulos et al.) (266) 561
- Membranes**
Phase transitions in mammalian ——— (Blazyk, Stein) (266) 737
- Membranes**
Photoelectric effects in bimolecular lipid-dye ——— (Ullrich, Kuhn) (266) 584
- Membranes**
Properties of a soluble calcium- and magnesium-activated ATPase released from *Escherichia coli* ——— (Davies, Bragg) (266) 273
- Membrane proteins**
Characterization of the mycoplasma ———. III. Gel filtration and immunological characterization of *Acholeplasma laidlawii* membrane proteins (Ne'eman et al.) (266) 255

- Membrane proteins
Solubilization and fractionation of human erythrocyte ——— (Juliano) (266) 301
- Membranes
Valinomycin as a probe for the study of structural changes of black lipid ——— (Stark et al.) (266) 603
- Membrane structure
Interrelationship of ——— and protein structure in the functioning of the sodium, potassium-activated ATPase (Grisham, Barnett) (266) 613
- Membrane structures
Lipid requirements of functional ——— as indicated by the reversible inactivation of sodium-potassium-dependent ATPase (Järnefelt) (266) 91
- Methionine
How ——— and glutamine prevent inhibition of growth by methionine sulfoximine (Meins, Abrams) (266) 307
- Methionine sulfoximine
How methionine and glutamine prevent inhibition of growth by ——— (Meins, Abrams) (266) 307
- Methionine transport
Phenylalanine and ——— in *Tetrahymena pyriformis*. Characteristics of a concentrating, inducible transport system (Hoffmann, Rasmussen) (266) 206
- Microsomes
pH dependence of the effects of sodium, potassium and ouabain on the ATPase activity of NaI-treated brain ——— with magnesium, manganese, calcium and zinc as divalent metal activators (Atkinson, Lowe) (266) 103
- Monosaccharides
Effects of ——— on the sodium activation curve of the intestinal sodium-potassium-dependent ATPase (Dettmer et al.) (266) 128
- Mycoplasma membrane proteins
Characterization of the ———. III. Gel filtration and immunological characterization of *Acholeplasma laidlawii* membrane proteins (Ne'eman et al.) (266) 255
- Nerve membrane
Binding of radioactive tetrodotoxin to ——— preparations (Hafemann) (266) 548
- Nerve membranes
Thiamine in ——— (Itokawa et al.) (266) 293
- Nigericin
Effects of ———, valinomycin, and 2,4-dinitrophenol on intracellular pH, glycolysis, and potassium concentration of Ehrlich ascites tumor cells (Poole et al.) (266) 463
- Noradrenaline uptake
Effects of external sodium and potassium on the initial rates of ——— by synaptosomes prepared from rat brain (White, Paton) (266) 116
- Norepinephrine
Isolation of a proteolipid from spleen capsule binding (\pm) - ^3H ——— (Füzer de Plazas, Robetis) (266) 246
- Norleucine
Ileal bile acid transport conjugated with ——— and lysin (Singletary et al.) (266) 238
- Ouabain
pH dependence of the effects of sodium, potassium and ——— on the ATPase activity of NaI-treated brain microsomes with magnesium, manganese, calcium and zinc as divalent metal activators (Atkinson, Lowe) (266) 103
- Permeability
Effects of lithium on the ——— of an epithelial membrane, the toad urinary bladder (Bentley, Wasserman) (266) 285
- Permeability
Model transport studies utilizing lecithin spherules. I. Critical evaluations of several physical models in the determination of the ——— coefficient for glucose (Chowhan et al.) (266) 320
- Phenylalanine transport
——— and methionine transport in *Tetrahymena pyriformis*. Characteristics of a concentrating, inducible transport system (Hoffmann, Rasmussen) (266) 206
- Phosphatidylethanolamine multibilayers
Influence of pH and cholesterol on the structure of ——— (Hsia, Boggs) (266) 18
- Phospholipid membranes
Permeability properties of ———: Effect of cholesterol and temperature (Papahadjopoulos et al.) (266) 561
- Photoresponses
Effect of temperature on the biphasic ——— of an all-trans-retinal bimolecular lipid membrane (Kobamoto, Tien) (266) 56
- Plasma membrane
Effect of detergents and sodium fluoride on the enzyme activities of the rat liver ——— (Dunnick et al.) (266) 684
- Plasma membrane
Isolation and characterization of ——— from cultured cells. IV. The carbohydrate composition of membranes isolated from oncogenic RNA virus-converted chick embryo fibroblasts (Perdue et al.) (266) 505
- Plasma membranes
Characterization of the adenyl cyclase of rat kidney ——— (Forte) (266) 524
- Plasma membranes
Circular dichroism of biological membranes. II. ——— and sarcotubular vesicles (Masseti et al.) (266) 1
- Plasma membranes
Comparative studies on enzyme markers of liver ——— (Lauter et al.) (266) 511
- Plasma membranes
Incorporation of Fucose into HeLa cell ——— during the cell cycle (Nowakowski et al.) (266) 1

- Plasma membranes
Isolation and characterization of lymphocyte ——— (Ferber et al.) (266) 494
- Plasma membranes
Lipid composition of adult rat brain synaptosomal ——— (Breckenridge et al.) (266) 695
- Potassium
Effects of external sodium and ——— on the initial rates of noradrenaline uptake by synaptosomes prepared from rat brain (White, Paton) (266) 116
- Potassium
pH dependence of the effects of sodium, ——— and ouabain on the ATPase activity of NaI-treated brain microsomes with magnesium, manganese, calcium and zinc as divalent metal activaters (Atkinson, Lowe) (266) 103
- Potassium concentration
Effects of nigericin, valinomycin, and 2,4-dinitrophenol on intracellular pH, glycolysis, and ——— of Ehrlich ascites tumor cells (Poole et al.) (266) 463
- Potassium ions
Role of hydrogen and ——— in the transport of acidic amino acids in *Staphylococcus aureus* (Gale, Llewellyn) (266) 182
- Protein structure
Interrelationship of membrane structure and ——— in the functioning of the sodium potassium-activated ATPase (Grisham, Barnett) (266) 613
- Proteolipid
Isolation of ——— from spleen capsule binding (\pm)-[³H]norepinephrine (Plazas, Robertis) (266) 246
- Renal cells
Effect of pH on the water and electrolyte content of ——— (Rorive et al.) (266) 376
- Renal Cortex
Disaccharidase activity of a membrane fraction obtained from the rabbit ——— (Stevenson) (266) 144
- Renal medulla
Accumulation and metabolism of [¹⁴]hypoxanthine by slices of rabbit ——— (Berndt, Miller) (266) 453
- Retinal rod disk membranes
Calcium binding to ——— (Neufeld et al.) (266) 67
- Sarcotubular vesicles
Circular dichroism of biological membranes. II. Plasma membranes and ——— (Mascotti et al.) (266) 7
- Sodium
Effects of external ——— and potassium on the initial rates of noradrenaline uptake by synaptosomes prepared from rat brain (White, Paton) (266) 116
- Sodium
pH dependence of the effects of ———, potassium and ouabain on the ATPase activity of NaI-treated brain microsomes with magnesium, manganese, calcium and zinc as divalent metal activaters (Atkinson, Lowe) (266) 103
- Sodium activation
Effects of monosaccharides on the ——— curve of the intestinal sodium-potassium-dependent ATPase (Dettmer et al.) (266) 128
- Sodium dodecyl sulphate
Inadequacy of ——— as a dissociative agent for brain proteins and glycoproteins (Katzman) (266) 269
- Sodium-potassium-activated ATPase
Inhibition of ——— by the direct lytic factor of cobra venom (*Naja naja*) (Lankisch et al.) (266) 133
- Sodium, potassium-activated ATPase
Interrelationship of membrane and protein structure in the functioning of the ——— (Grisham, Barnett) (266) 613
- Sodium, potassium-ATPase activity
——— of embryonic chick heart and skeletal muscles as a function of age (Sperelakis) (266) 230
- Sodium-potassium-dependent ATPase
Divalent cations as allosteric modifiers of the ——— (Robinson) (266) 97
- Sodium-potassium-dependent ATPase
Lipid requirements of functional membrane structures as indicated by the reversible inactivation of ——— (Järnevelt) (266) 91
- Sodium, potassium-stimulated-ATPase
Effect of lipoxidation on synaptosomal ——— isolated from the cerebral cortex of squirrel monkey (Sun) (266) 350
- Sodium pump
Differential effects of digitonin on some enzyme activities of the ——— (Winter) (266) 135
- Stearic acid
Study of intact human erythrocytes and erythrocyte ghosts using ——— spin labels (Landsberger et al.) (266) 1
- Sterols
Monolayer interactions of individual lecithins with natural ——— (Ghosh, Tinoco) (266) 41
- Sugar exchange
Simple resolution of the kinetic anomaly in the ——— of different sugars across the human erythrocyte membrane (Eilam, Stein) (266) 161
- Sugar transport
——— in beef erythrocytes (Hoss et al.) (266) 174
- Synaptosomes
Effects of external sodium and potassium on the initial rates of noradrenaline uptake by ——— prepared from rat brain (White, Paton) (266) 116
- Tetrodotoxin
Binding of radioactive ——— to nerve membrane preparations (Hafeman) (266) 548

- Thiamine
——— in nerve membrane (Itokawa et al.) (266) 293
- Transport
Model ——— studies utilizing lecithin spherules. I. Critical evaluations of several physical models in the determination of the coefficient for glucose (Chowhan et al.) (266) 320
- Transport of acidic amino acids
Role of hydrogen and potassium ions in the ——— in *Staphylococcus aureus* (Gale, Llewellyn) (266) 182
- Transport rates
Effect of unstirred layers on the measurement of ——— in individual cells (Miller) (266) 85
- Transport System
Phenylalanine and methionine transport in *Tetrahymena pyriformis*. Characteristics of a concentrating, inducible ——— (Hoffmann, Rasmussen) (266) 206
- Tumor cell
Interaction of *Ricinus communis* agglutinin with normal and ——— surfaces (Nicolson, Blaustein) (266) 543
- Valinomycin
——— as a probe for the study of structural changes of black lipid membranes (Stark et al.) (266) 603
- Valinomycin
Effects of nigericin, ———, and 2,4-dinitrophenol on intracellular pH, glycolysis, and potassium concentration of Ehrlich ascites tumor cells (Poole et al.) (266) 463
- Water
Effects of pH on the ——— and electrolyte content of renal cells (Rorive et al.) (266) 376
- Water-lipid lamellar phases
Diffusion processes in ——— (Rigaud et al.) (266) 72
- Zinc
pH dependence of the effects of sodium, potassium and ouabain on the ATPase activity of NaI-treated brain microsomes with magnesium, manganese and ——— as divalent metal activators (Atkinson, Lowe) (266) 103
