

Front cover image: HtrFRET between an amino-terminal SNAP-tagged receptor and an htrFRET acceptor labelled ligand. An amino-terminal SNAP-tagged GPCR labelled with the Taglite htrFRET donor, Lum4Tb, binds a ligand labelled with a Taglite acceptor. The htrFRET signal can be used in a similar way as radioactive ligand binding to investigate the receptor-ligand interaction. Taken from 'Structural and biophysical characterisation of G protein-coupled receptor ligand binding using resonance energy transfer and fluorescent labelling techniques' by Richard J. Ward and Graeme Milligan
