

Subject Index to Volume 57

Acidification

Effect of reducing agents on the acidification capacity and the proton motive force of *Lactococcus lactis* ssp. *cremoris* resting cells (57) 113

Action potential

The effect of pulse repetition frequency on the uptake into electroporated cells in vitro with possible applications in electrochemotherapy (57) 167

Apoptosis

Effect of 7 mT static magnetic field and iron ions on rat lymphocytes: apoptosis, necrosis and free radical processes (57) 107

ATR-FTIR

Effect of electric fields on the structure of phosphatidyl choline in a multibilayer system (57) 145

Bacteriorhodopsin

Photoelectric response of purple membrane fragments adsorbed on a lipid monolayer supported by mercury and characterization of the resulting interphase (57) 155

Bilayer lipid membrane

Differences in ion-channel formation by ampullosporins B, C, D and semisynthetic desacetyltryptophanyl ampullosporin A (57) 119

Biosensor

Effect of initial carbon sources on the electrochemical detection of glucose by *Gluconobacter oxydans* (57) 173

Broth culture

Change in broth culture is associated with significant suppression of *Escherichia coli* death under high magnetic field (57) 139

Ca²⁺ oscillations

The influence of different InsP₃ receptor isoforms on Ca²⁺ signaling in tracheal smooth muscle cells (57) 129

Capacitance

Mitochondrial porin incorporation into black lipid membranes: ionic and gating contribution to the total current (57) 97

Chlorophyll fluorescence

Photo-electrochemical control of photosystem II chlorophyll fluorescence in vivo (57) 123

Dependence on structure

Differences in ion-channel formation by ampullosporins B, C, D and semisynthetic desacetyltryptophanyl ampullosporin A (57) 119

Dichroic ratio

Effect of electric fields on the structure of phosphatidyl choline in a multibilayer system (57) 145

Dipole orientation

Effect of electric fields on the structure of phosphatidyl choline in a multibilayer system (57) 145

Dithiothreitol

Effect of reducing agents on the acidification capacity and the proton motive force of *Lactococcus lactis* ssp. *cremoris* resting cells (57) 113

DNA immobilization

ZrO₂ gel-derived DNA-modified electrode and the effect of lanthanide on its electron transfer behavior (57) 149

DPPC

Effect of electric fields on the structure of phosphatidyl choline in a multibilayer system (57) 145

Electric potential

Photo-electrochemical control of photosystem II chlorophyll fluorescence in vivo (57) 123

Electrochemotherapy

The effect of pulse repetition frequency on the uptake into electroporated cells in vitro with possible applications in electrochemotherapy (57) 167

Electron transfer

ZrO₂ gel-derived DNA-modified electrode and the effect of lanthanide on its electron transfer behavior (57) 149

Escherichia coli

Change in broth culture is associated with significant suppression of *Escherichia coli* death under high magnetic field (57) 139

Gating mechanism

Mitochondrial porin incorporation into black lipid membranes: ionic and gating contribution to the total current (57) 97

Gluconobacter oxydans

Effect of initial carbon sources on the electrochemical detection of glucose by *Gluconobacter oxydans* (57) 173

Glucose oxidation

Effect of initial carbon sources on the electrochemical detection of glucose by *Gluconobacter oxydans* (57) 173

High magnetic field

Change in broth culture is associated with significant suppression of *Escherichia coli* death under high magnetic field (57) 139

Initial carbon source

Effect of initial carbon sources on the electrochemical detection of glucose by *Gluconobacter oxydans* (57) 173

InsP₃ receptor subtypes

The influence of different InsP₃ receptor isoforms on Ca²⁺ signaling in tracheal smooth muscle cells (57) 129

Ion channels

Differences in ion-channel formation by ampullosporins B, C, D and semisynthetic desacetyltryptophanyl ampullosporin A (57) 119

Lactic acid bacteria

Effect of reducing agents on the acidification capacity and the proton motive force of *Lactococcus lactis* ssp. *cremoris* resting cells (57) 113

Lanthanide

ZrO₂ gel-derived DNA-modified electrode and the effect of lanthanide on its electron transfer behavior (57) 149

- Lipid monolayers
Photoelectric response of purple membrane fragments adsorbed on a lipid monolayer supported by mercury and characterization of the resulting interphase (57) 155
- Lipid peroxidation
Effect of 7 mT static magnetic field and iron ions on rat lymphocytes: apoptosis, necrosis and free radical processes (57) 107
- Lucifer yellow
The effect of pulse repetition frequency on the uptake into electropor-meabilized cells in vitro with possible applications in electrochemotherapy (57) 167
- Lymphocytes
Effect of 7 mT static magnetic field and iron ions on rat lymphocytes: apoptosis, necrosis and free radical processes (57) 107
- Mercury
Photoelectric response of purple membrane fragments adsorbed on a lipid monolayer supported by mercury and characterization of the resulting interphase (57) 155
- Microbial fuel cell
Effect of initial carbon sources on the electrochemical detection of glucose by *Gluconobacter oxydans* (57) 173
- Modified electrode
ZrO₂ gel-derived DNA-modified electrode and the effect of lanthanide on its electron transfer behavior (57) 149
- Muscle contraction
The effect of pulse repetition frequency on the uptake into electropor-meabilized cells in vitro with possible applications in electrochemotherapy (57) 167
- Necrosis
Effect of 7 mT static magnetic field and iron ions on rat lymphocytes: apoptosis, necrosis and free radical processes (57) 107
- Oxidized cholesterol
Mitochondrial porin incorporation into black lipid membranes: ionic and gating contribution to the total current (57) 97
- Peptaibol-type ampullosporins A, B, C and D
Differences in ion-channel formation by ampullosporins B, C, D and semisynthetic desacetyltryptophanyl ampullosporin A (57) 119
- Phosphatidylinositol
Mitochondrial porin incorporation into black lipid membranes: ionic and gating contribution to the total current (57) 97
- Photo-electrochemical quenching
Photo-electrochemical control of photosystem II chlorophyll fluorescence in vivo (57) 123
- Photosystem II, photochemical quenching
Photo-electrochemical control of photosystem II chlorophyll fluorescence in vivo (57) 123
- Proton motive force
Effect of reducing agents on the acidification capacity and the proton motive force of *Lactococcus lactis* ssp. *cremoris* resting cells (57) 113
- Proton transport
Photoelectric response of purple membrane fragments adsorbed on a lipid monolayer supported by mercury and characterization of the resulting interphase (57) 155
- Pulse repetition frequency
The effect of pulse repetition frequency on the uptake into electropor-meabilized cells in vitro with possible applications in electrochemotherapy (57) 167
- Smooth muscle cells
The influence of different InsP₃ receptor isoforms on Ca²⁺ signaling in tracheal smooth muscle cells (57) 129
- Sodium borohydride
Effect of reducing agents on the acidification capacity and the proton motive force of *Lactococcus lactis* ssp. *cremoris* resting cells (57) 113
- Sodium dithionite
Effect of reducing agents on the acidification capacity and the proton motive force of *Lactococcus lactis* ssp. *cremoris* resting cells (57) 113
- Static magnetic field
Effect of 7 mT static magnetic field and iron ions on rat lymphocytes: apoptosis, necrosis and free radical processes (57) 107
- Transmembrane potential
Photoelectric response of purple membrane fragments adsorbed on a lipid monolayer supported by mercury and characterization of the resulting interphase (57) 155
- Zirconia gel
ZrO₂ gel-derived DNA-modified electrode and the effect of lanthanide on its electron transfer behavior (57) 149
