

Subject Index to Volume 59

Adrenodoxin

Electrochemical behaviour of human adrenodoxin on a pyrolytic graphite electrode (59) 41

Aggregation

Time evolution of the formation of different size cationic liposome–polyelectrolyte complexes (59) 99

Animal model

Animal models for treatment of unresectable liver tumours: a histopathologic and ultra-structural study of cellular toxic changes after electrochemical treatment in rat and dog liver (59) 89

Ascorbic acid

Simultaneous electroanalysis of dopamine and ascorbic acid using poly (*N,N*-dimethylaniline)-modified electrodes (59) 11

Bioelectromagnetism

A new computational approach for electrical analysis of biological tissues (59) 73

Biological mechanism of action

Electrochemical study of oxygen interaction with lapachol and its radical anions (59) 85

Biological system modelling

A new computational approach for electrical analysis of biological tissues (59) 73

Biosensor

Nanostructured platinum-lipid bilayer composite as biosensor (59) 65
Biosensor for dopamine based on stabilized lipid films with incorporated resorcin[4]arene receptor (59) 107

Calcium influx

Catecholamine release from cultured bovine adrenal medullary chromaffin cells in the presence of 60-Hz magnetic fields (59) 57

Cellular toxic change

Animal models for treatment of unresectable liver tumours: a histopathologic and ultra-structural study of cellular toxic changes after electrochemical treatment in rat and dog liver (59) 89

Cellular uptake

pH, serum proteins and ionic strength influence the uptake of merocyanine 540 by WiDr cells and its interaction with membrane structures (59) 1

Conducting copolymer

Immobilization of invertase in conducting copolymers of 3-methyl-thienyl methacrylate (59) 29

Core-BChl

The revision of the model of primary energy conversion in purple bacteria (59) 113

Cyclic voltammetry

Electrochemical behaviour of human adrenodoxin on a pyrolytic graphite electrode (59) 41
Nanostructured platinum-lipid bilayer composite as biosensor (59) 65
Membrane fluidity sensing microbial fuel cell (59) 121

DDAB

Liposome-mediated conformation transition of DNA detected by molecular probe: methyl green (59) 21

Differential pulse voltammetry

Voltammetric and impedance studies of inosine-5'-monophosphate and hypoxanthine (59) 49

DNA

Liposome-mediated conformation transition of DNA detected by molecular probe: methyl green (59) 21
Hybridization of DNA at the surface of phospholipid monolayers. Effect of orientation of oligonucleotide chains (59) 35

DNA-biosensor

Voltammetric and impedance studies of inosine-5'-monophosphate and hypoxanthine (59) 49

Dopamine

Simultaneous electroanalysis of dopamine and ascorbic acid using poly (*N,N*-dimethylaniline)-modified electrodes (59) 11
Biosensor for dopamine based on stabilized lipid films with incorporated resorcin[4]arene receptor (59) 107

DOPC monolayers

Hybridization of DNA at the surface of phospholipid monolayers. Effect of orientation of oligonucleotide chains (59) 35

DOTAP

Time evolution of the formation of different size cationic liposome–polyelectrolyte complexes (59) 99

DPPC

Time evolution of the formation of different size cationic liposome–polyelectrolyte complexes (59) 99

Electrochemical adsorption

Voltammetric and impedance studies of inosine-5'-monophosphate and hypoxanthine (59) 49

Electrochemical impedance

Voltammetric and impedance studies of inosine-5'-monophosphate and hypoxanthine (59) 49

Electrochemical impedance spectroscopy

Nanostructured platinum-lipid bilayer composite as biosensor (59) 65

Electrochemical treatment

Animal models for treatment of unresectable liver tumours: a histopathologic and ultra-structural study of cellular toxic changes after electrochemical treatment in rat and dog liver (59) 89

Electropolymerization

Simultaneous electroanalysis of dopamine and ascorbic acid using poly (*N,N*-dimethylaniline)-modified electrodes (59) 11
Immobilization of invertase in conducting copolymers of 3-methyl-thienyl methacrylate (59) 29

Energy trapping

The revision of the model of primary energy conversion in purple bacteria (59) 113

Environmental shock

Membrane fluidity sensing microbial fuel cell (59) 121

- Epinephrine
Catecholamine release from cultured bovine adrenal medullary chromaffin cells in the presence of 60-Hz magnetic fields (59) 57
- [2Fe₂S] centres
Electrochemical behaviour of human adrenodoxin on a pyrolytic graphite electrode (59) 41
- Field calculation
A new computational approach for electrical analysis of biological tissues (59) 73
- Homeoviscous adaptation
Membrane fluidity sensing microbial fuel cell (59) 121
- Human
Electrochemical behaviour of human adrenodoxin on a pyrolytic graphite electrode (59) 41
- Hybridization
Hybridization of DNA at the surface of phospholipid monolayers. Effect of orientation of oligonucleotide chains (59) 35
- Hydrophobicity
Simultaneous electroanalysis of dopamine and ascorbic acid using poly (*N,N*-dimethylaniline)-modified electrodes (59) 11
- Hypoxanthine
Voltammetric and impedance studies of inosine-5'-monophosphate and hypoxanthine (59) 49
- Immobilization
Immobilization of invertase in conducting copolymers of 3-methylthienyl methacrylate (59) 29
- Inosine 5'-monophosphate
Voltammetric and impedance studies of inosine-5'-monophosphate and hypoxanthine (59) 49
- Invertase
Immobilization of invertase in conducting copolymers of 3-methylthienyl methacrylate (59) 29
- Ionic strength
pH, serum proteins and ionic strength influence the uptake of merocyanine 540 by WiDr cells and its interaction with membrane structures (59) 1
- Langmuir–Blodgett technique
Hybridization of DNA at the surface of phospholipid monolayers. Effect of orientation of oligonucleotide chains (59) 35
- Lapachol
Electrochemical study of oxygen interaction with lapachol and its radical anions (59) 85
- Lipid membranes
Biosensor for dopamine based on stabilized lipid films with incorporated resorcin[4]arene receptor (59) 107
- MC 540
pH, serum proteins and ionic strength influence the uptake of merocyanine 540 by WiDr cells and its interaction with membrane structures (59) 1
- Metalloprotein
Electrochemical behaviour of human adrenodoxin on a pyrolytic graphite electrode (59) 41
- MG
Liposome-mediated conformation transition of DNA detected by molecular probe: methyl green (59) 21
- Microbial fuel cell
Membrane fluidity sensing microbial fuel cell (59) 121
- Nanoparticles
Nanostructured platinum-lipid bilayer composite as biosensor (59) 65
- Neural-type cells
Catecholamine release from cultured bovine adrenal medullary chromaffin cells in the presence of 60-Hz magnetic fields (59) 57
- Neurosecretion
Catecholamine release from cultured bovine adrenal medullary chromaffin cells in the presence of 60-Hz magnetic fields (59) 57
- Norepinephrine
Catecholamine release from cultured bovine adrenal medullary chromaffin cells in the presence of 60-Hz magnetic fields (59) 57
- Oligonucleotide orientation
Hybridization of DNA at the surface of phospholipid monolayers. Effect of orientation of oligonucleotide chains (59) 35
- Oxidative stress
Electrochemical study of oxygen interaction with lapachol and its radical anions (59) 85
- Oxygen interactions
Electrochemical study of oxygen interaction with lapachol and its radical anions (59) 85
- pH
pH, serum proteins and ionic strength influence the uptake of merocyanine 540 by WiDr cells and its interaction with membrane structures (59) 1
- Poly (*N,N*-dimethyl aniline)
Simultaneous electroanalysis of dopamine and ascorbic acid using poly (*N,N*-dimethylaniline)-modified electrodes (59) 11
- Polypyrrole
Immobilization of invertase in conducting copolymers of 3-methylthienyl methacrylate (59) 29
- Polythiophene
Immobilization of invertase in conducting copolymers of 3-methylthienyl methacrylate (59) 29
- Powerline frequency magnetic fields
Catecholamine release from cultured bovine adrenal medullary chromaffin cells in the presence of 60-Hz magnetic fields (59) 57
- Probe molecule
Liposome-mediated conformation transition of DNA detected by molecular probe: methyl green (59) 21
- Purple bacteria
The revision of the model of primary energy conversion in purple bacteria (59) 113
- Pyrolytic graphite
Electrochemical behaviour of human adrenodoxin on a pyrolytic graphite electrode (59) 41
- Reaction center
The revision of the model of primary energy conversion in purple bacteria (59) 113
- Spectroscopy
Liposome-mediated conformation transition of DNA detected by molecular probe: methyl green (59) 21
- Stabilization
Biosensor for dopamine based on stabilized lipid films with incorporated resorcin[4]arene receptor (59) 107
- Supported bilayer lipid membrane (s-BLM)
Nanostructured platinum-lipid bilayer composite as biosensor (59) 65
- Unresectable liver tumour
Animal models for treatment of unresectable liver tumours: a histopathologic and ultra-structural study of cellular toxic changes after electrochemical treatment in rat and dog liver (59) 89
- Voltammetry
Liposome-mediated conformation transition of DNA detected by molecular probe: methyl green (59) 21
