

Subject Index to Volume 60

Adsorptive transfer stripping technique

- Electrochemical study of heavy metals and metallothionein in yeast *Yarrowia lipolytica* (60) 29

Bacterial bioluminescence

- Voltammetric and spectroelectrochemical characterization of a water-soluble viologen polymer and its application to electron-transfer mediator for enzyme-free regeneration of NADH (60) 57

Bacteriorhodopsin

- Modeling of ionic relaxation around a biomembrane disk (60) 97

Bioaccumulation

- Electrochemical study of heavy metals and metallothionein in yeast *Yarrowia lipolytica* (60) 29

Biosensor

- Evaluation of redox mediators for amperometric biosensors: Ru-complex modified carbon-paste/enzyme electrodes (60) 65

Brownian dynamics

- Modeling of ionic relaxation around a biomembrane disk (60) 97

Cadmium, nickel, cobalt and zinc

- Electrochemical study of heavy metals and metallothionein in yeast *Yarrowia lipolytica* (60) 29

Capsicum annuum L.

- A short-term NaCl exposure increases the Na⁺ conductance of outward-rectified cation currents in the pith cells of sweet pepper (60) 47

Carbon-paste electrode

- Evaluation of redox mediators for amperometric biosensors: Ru-complex modified carbon-paste/enzyme electrodes (60) 65

Channel voltage gating

- Effective gating charge of ion channels induced by toxin syringomycin E in lipid bilayers (60) 21

Chlorophyll fluorescence

- Photoelectric effects on chlorophyll fluorescence of photosystem II in vivo. Kinetics in the absence and presence of valinomycin (60) 87

Conductance

- A short-term NaCl exposure increases the Na⁺ conductance of outward-rectified cation currents in the pith cells of sweet pepper (60) 47

Constant current chronopotentiometric stripping analysis

- Electrochemical study of heavy metals and metallothionein in yeast *Yarrowia lipolytica* (60) 29

Diaphorase

- Imaging of enzyme activity by scanning electrochemical microscope equipped with a feedback control for substrate–probe distance (60) 115

Differential pulse voltammetry

- Electrochemical study of heavy metals and metallothionein in yeast *Yarrowia lipolytica* (60) 29

Diffuse double layer

- Modeling of ionic relaxation around a biomembrane disk (60) 97

DNA delivery

- Electrical energy required to form large conducting pores (60) 107

Doxorubicin

- Electrochemical monitoring of the interaction of doxorubicin with nicotinamide and Fe(III) ions under aerobic and anaerobic conditions (60) 11

Drug resistance

- Methotrexate cytotoxicity on MCF-7 breast cancer cells is not altered by exposure to 25 Hz, 1.5 mT magnetic field and iron (III) chloride hexahydrate (60) 81

Electric field

- Electrical energy required to form large conducting pores (60) 107

Electric field effect

- Photoelectric effects on chlorophyll fluorescence of photosystem II in vivo. Kinetics in the absence and presence of valinomycin (60) 87

Electrochemistry

- Electrochemical monitoring of the interaction of doxorubicin with nicotinamide and Fe(III) ions under aerobic and anaerobic conditions (60) 11

Electrochemisrty

- Electrochemical study on the keto-enol tautomerization of *p*-hydroxyphenylpyruvic acid in aqueous solution (60) 37

Electron transfer

- Voltammetric and spectroelectrochemical characterization of a water-soluble viologen polymer and its application to electron-transfer mediator for enzyme-free regeneration of NADH (60) 57

Electron transfer

- Evaluation of redox mediators for amperometric biosensors: Ru-complex modified carbon-paste/enzyme electrodes (60) 65

Electropermeabilization

- Quantitative model of small molecules uptake after in vitro cell electropermeabilization (60) 1

Electroporation

- Quantitative model of small molecules uptake after in vitro cell electropermeabilization (60) 1

Electroporation

- Electrical energy required to form large conducting pores (60) 107

Extremely low frequency

- Effects of ELF and static magnetic fields on calcium oscillations in islets of Langerhans (60) 73

Feedback control

- Imaging of enzyme activity by scanning electrochemical microscope equipped with a feedback control for substrate–probe distance (60) 115

Fe(III)/Fe(II)

- Electrochemical monitoring of the interaction of doxorubicin with nicotinamide and Fe(III) ions under aerobic and anaerobic conditions (60) 11

Human breast cancer cells

- Methotrexate cytotoxicity on MCF-7 breast cancer cells is not altered by exposure to 25 Hz, 1.5 mT magnetic field and iron (III) chloride hexahydrate (60) 81

Ion channels

- Effective gating charge of ion channels induced by toxin syringomycin E in lipid bilayers (60) 21

Ionic relaxation

- Modeling of ionic relaxation around a biomembrane disk (60) 97

- Iron ion
Methotrexate cytotoxicity on MCF-7 breast cancer cells is not altered by exposure to 25 Hz, 1.5 mT magnetic field and iron (III) chloride hexahydrate (60) 81
- Islets of Langerhans
Effects of ELF and static magnetic fields on calcium oscillations in islets of Langerhans (60) 73
- Keto-enol tautomerization of *p*-hydroxyphenylpyruvic acid
Electrochemical study on the keto-enol tautomerization of *p*-hydroxyphenylpyruvic acid in aqueous solution (60) 37
- Lipid membranes
Effective gating charge of ion channels induced by toxin syringomycin E in lipid bilayers (60) 21
- Maxwell stress tensor
Electrical energy required to form large conducting pores (60) 107
- MCF-7
Methotrexate cytotoxicity on MCF-7 breast cancer cells is not altered by exposure to 25 Hz, 1.5 mT magnetic field and iron (III) chloride hexahydrate (60) 81
- Mediator
Voltammetric and spectroelectrochemical characterization of a water-soluble viologen polymer and its application to electron-transfer mediator for enzyme-free regeneration of NADH (60) 57
- Metallothionein
Electrochemical study of heavy metals and metallothionein in yeast *Yarrowia lipolytica* (60) 29
- Methotrexate
Methotrexate cytotoxicity on MCF-7 breast cancer cells is not altered by exposure to 25 Hz, 1.5 mT magnetic field and iron (III) chloride hexahydrate (60) 81
- Na⁺
A short-term NaCl exposure increases the Na⁺ conductance of outward-rectified cation currents in the pith cells of sweet pepper (60) 47
- NAD⁺
Voltammetric and spectroelectrochemical characterization of a water-soluble viologen polymer and its application to electron-transfer mediator for enzyme-free regeneration of NADH (60) 57
- NADH
Voltammetric and spectroelectrochemical characterization of a water-soluble viologen polymer and its application to electron-transfer mediator for enzyme-free regeneration of NADH (60) 57
- Nicotinamide
Electrochemical monitoring of the interaction of doxorubicin with nicotinamide and Fe(III) ions under aerobic and anaerobic conditions (60) 11
- ORC
A short-term NaCl exposure increases the Na⁺ conductance of outward-rectified cation currents in the pith cells of sweet pepper (60) 47
- Patch clamp
A short-term NaCl exposure increases the Na⁺ conductance of outward-rectified cation currents in the pith cells of sweet pepper (60) 47
- Pharmacokinetic model
Quantitative model of small molecules uptake after in vitro cell electroporation (60) 1
- Photochemical quenching
Photoelectric effects on chlorophyll fluorescence of photosystem II in vivo. Kinetics in the absence and presence of valinomycin (60) 87
- Photosystem II
Photoelectric effects on chlorophyll fluorescence of photosystem II in vivo. Kinetics in the absence and presence of valinomycin (60) 87
- Plasma membrane
A short-term NaCl exposure increases the Na⁺ conductance of outward-rectified cation currents in the pith cells of sweet pepper (60) 47
- Pore energy
Electrical energy required to form large conducting pores (60) 107
- Pore expansion rate
Electrical energy required to form large conducting pores (60) 107
- Pulsed electromagnetic fields (PEMF)
Methotrexate cytotoxicity on MCF-7 breast cancer cells is not altered by exposure to 25 Hz, 1.5 mT magnetic field and iron (III) chloride hexahydrate (60) 81
- Redox mediator
Evaluation of redox mediators for amperometric biosensors: Ru-complex modified carbon-paste/enzyme electrodes (60) 65
- Resealing kinetics
Quantitative model of small molecules uptake after in vitro cell electroporation (60) 1
- Ru-complex
Evaluation of redox mediators for amperometric biosensors: Ru-complex modified carbon-paste/enzyme electrodes (60) 65
- SECM
Imaging of enzyme activity by scanning electrochemical microscope equipped with a feedback control for substrate–probe distance (60) 115
- Shear force
Imaging of enzyme activity by scanning electrochemical microscope equipped with a feedback control for substrate–probe distance (60) 115
- Static magnetic fields
Effects of ELF and static magnetic fields on calcium oscillations in islets of Langerhans (60) 73
- Transmembrane transport
Quantitative model of small molecules uptake after in vitro cell electroporation (60) 1
- Trapping mechanism
Photoelectric effects on chlorophyll fluorescence of photosystem II in vivo. Kinetics in the absence and presence of valinomycin (60) 87
- UV–VIS spectroscopy
Electrochemical monitoring of the interaction of doxorubicin with nicotinamide and Fe(III) ions under aerobic and anaerobic conditions (60) 11
- Valinomycin
Photoelectric effects on chlorophyll fluorescence of photosystem II in vivo. Kinetics in the absence and presence of valinomycin (60) 87
- Viologen
Voltammetric and spectroelectrochemical characterization of a water-soluble viologen polymer and its application to electron-transfer mediator for enzyme-free regeneration of NADH (60) 57
- Yarrowia lipolytica*
Electrochemical study of heavy metals and metallothionein in yeast *Yarrowia lipolytica* (60) 29
- Yeast
Electrochemical study of heavy metals and metallothionein in yeast *Yarrowia lipolytica* (60) 29
