|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| DNA-based electrochemical biosensors for monitoring of <i>bis</i> -indoles as potential antitumoral agents, chemistry, X-ray crystallography<br>D. Maciejewska, I. Szpakowska, I. Wolska, M. Niemyjska, M. Mascini and M. Maj-Żurawska . . . . . | 1   |
| Hemoglobin/colloidal silver nanoparticles immobilized in titania sol–gel film on glassy carbon electrode: Direct electrochemistry and electrocatalysis<br>S. Zhao, K. Zhang, Y. Sun and C. Sun . . . . .                                         | 10  |
| Electrochemistry and kinetics of fungal laccase mediators<br>G.P. Shumakovich, S.V. Shleev, O.V. Morozova, P.S. Khohlov, I.G. Gazaryan and A.I. Yaropolov . . . . .                                                                              | 16  |
| Remote NADH imaging through an ordered array of electrochemiluminescent nanoapertures<br>A. Chovin, P. Garrigue and N. Sojic . . . . .                                                                                                           | 25  |
| Electrochemical study of photovoltaic effect of nano titanium dioxide on hemoglobin<br>H. Zhou, X. Gan, T. Liu, Q. Yang and G. Li . . . . .                                                                                                      | 34  |
| Immobilization of tyrosinase on poly(indole-5-carboxylic acid) evidenced by electrochemical and spectroscopic methods<br>A.T. Bieganski, A. Michota, J. Bukowska and K. Jackowska . . . . .                                                      | 41  |
| Dielectric spectroscopy of <i>Anabaena 7120</i> protoplast suspensions<br>K. Zhao, W. Bai and H. Mi . . . . .                                                                                                                                    | 49  |
| Electrochemical detection of scDNA cleavage in the presence of macrocyclic hexaaza–copper(II) complex<br>J. Kang, S. Dong, X. Lu, B. Su, H. Wu and K. Sun . . . . .                                                                              | 58  |
| Electrocatalytical properties of polymethylferrocenyl dendrimers and their applications in biosensing<br>M.P.G. Armada, J. Losada, M. Zamora, B. Alonso, I. Cuadrado and C.M. Casado . . . . .                                                   | 65  |
| <i>Escherichia coli</i> -catalyzed bioelectrochemical oxidation of acetate in the presence of mediators<br>Y.-F. Wang, S.-S. Cheng, S. Tsujimura, T. Ikeda and K. Kano . . . . .                                                                 | 74  |
| Redox kinetics of adriamycin adsorbed on the surface of graphite and mercury electrodes<br>Š. Komorsky-Lovrić . . . . .                                                                                                                          | 82  |
| Three dimensional transport lattice model for describing action potentials in axons stimulated by external electrodes<br>D.A. Stewart, T.R. Gowrishankar and J.C. Weaver . . . . .                                                               | 88  |
| Selective transfer of energy through an alamethicin-doped artificial lipid membrane studied at discrete molecular level<br>T. Luchian and L. Mereuta . . . . .                                                                                   | 94  |
| Synthesis of DnaK and GroEL in <i>Escherichia coli</i> cells exposed to different magnetic field signals<br>B. Del Re, F. Bersani, P. Mesirca and G. Giorgi . . . . .                                                                            | 99  |
| Nitro radical anion formation from nitrofuryl substituted 1,4-dihydropyridine derivatives in mixed and non-aqueous media<br>J. Argüello, L.J. Núñez-Vergara, S. Bollo and J.A. Squella . . . . .                                                 | 104 |
| Real-time assay of immobilized tannase with a stopped-flow conductometric device<br>F.-S. Chang, P.-C. Chen, R.L.C. Chen, F.-M. Lu and T.-J. Cheng . . . . .                                                                                     | 113 |

|                                                                                                                                                                                                                   |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Microfluidic electroporation of robust 10- $\mu$ m vesicles for manipulation of picoliter volumes<br>E.S. Lee, D. Robinson, J.L. Rognlien, C.K. Harnett, B.A. Simmons, C.R. Bowe Ellis and R.V. Davalos . . . . . | 117 |
| Decrease of luminol chemiluminescence upon exposure of human blood serum to 50Hz electric fields<br>V. Calota, S. Dragoiu, A. Meghea and M. Giurginca. . . . .                                                    | 126 |
| Graphite epoxy composite electrodes modified with bacterial cells<br>Ü.A. Kırğöz, D. Odacı, S. Timur, A. Merkoçi, N. Pazarlıoğlu, A. Telefoncu and S. Alegret. . . . .                                            | 128 |
| Guide for Authors . . . . .                                                                                                                                                                                       | I   |
