Page 3. *The legend for Figure 1 should read:* Concentration of drug appearing 'downstream' after a single pass through an isolated rat liver. Test compounds were given at an initial (portal vein) concentration of 1  $\mu\text{M}$ , and BSP at 30  $\mu\text{M}$ . BSP data was qualitatively the same at the lower dose and is shown at 30  $\mu\text{M}$  for clarity.
