

Editorial

Bioorganic and Medicinal Chemistry is introduced to complement other Tetrahedron publications, especially *Bioorganic and Medicinal Chemistry Letters*, for the rapid publication of full papers and reviews in the fields of bioorganic chemistry, medicinal chemistry, and related disciplines. The aim of the journal is to promote research toward a better understanding at the molecular level of life processes, and use the understanding to design molecules to mimic or to control the processes. The editorial office has been receiving enthusiastic responses to the introduction of this new journal and has steadily received manuscripts. We are particularly pleased to have a very prestigious board of consulting editors as advisors who represent the diverse and interdisciplinary nature of this journal.

We plan to publish six issues in 1993 and twelve issues in each of the following years. As you can see in this issue, the typeset articles and color illustrations really represent a fresh appearance of the Tetrahedron publications. We hope to increasingly receive high-quality contributions and will continue to improve the quality of the journal to serve the scientific community, addressing studies at the interface of chemistry and biology.
