

## Editorial 1995

After completion of 2 volumes of *Bioorganic & Medicinal Chemistry*, we move into our third year of publication with the prospect of another successful year. Our Symposia-in-Print will continue to bring topics that are of the most interest to our readers. In the coming year we will be working on the following issues: 'Recent Advances in DNA Binding Agents', Guest Editor Rob Coleman; 'Advances in the Design and Development of Thrombin Inhibitors', Guest Editor B. N. Balasubramanian; 'Molecular Diversity: Creation and Application', Guest Editor Kim Janda; 'Bioorganic Chemistry of Pheromones', Guest Editor Kenji Mori; 'Oligosaccharide Recognition', Guest Editors Ole Hindsgaul and David Bundle and finally 'Structure-Based and Mechanism-Based Drug Design and Drug Action', Guest Editor Richard Silverman. You may contact the editorial office if you have any questions regarding these issues.

We continue to see an increase in manuscript submission. In response to this growth we have requested that authors submit their manuscript on disk, as well as in hard copy form. As a typeset journal this will improve the quality and reduce publication times. With the advances in computer technology we will continue to implement new and improved service. We want to ensure that we maintain the established quality of the journal and that we do not inadvertently discourage manuscript submissions with the introduction of additional formats. More detailed 'Instructions to Contributors' will help authors in the preparation of their manuscripts.

With an equal representation from both academic institutions and pharmaceutical laboratories we receive articles on both bioorganic chemistry and medicinal chemistry, with submissions from the full international community. This represents the successful dissemination of work conducted at the interface of chemistry and biology. Recognising that bioinorganic chemistry is a rapidly expanding area intimately related to the scope of *Bioorganic & Medicinal Chemistry*, we would like to announce the following additions to our Board of Consulting Editors: J. K. Barton, J. P. Collman, H. B. Gray, J. T. Groves, R. H. Holm and S. J. Lippard. It is our intention to make sure that the field of bioinorganic chemistry is included and represented in our journal.

Chi-Huey Wong  
Editor-in Chief  
*Bioorganic & Medicinal Chemistry*
