

Bioorganic & Medicinal Chemistry Instructions to Contributors

Bioorganic & Medicinal Chemistry seeks to publish review articles and experimental or theoretical research results of outstanding significance and timeliness in the fields of bioorganic chemistry, medicinal chemistry, bioinorganic chemistry, and related disciplines. See aims and scope of the Journal for full details.

Journal Policy: Publications will be typeset. The language of submission is English. All papers are submitted to referees who advise the Editor on the matter of acceptance in accordance with the high standards required, on the understanding that the subject matter has not been previously published and is not under consideration elsewhere. Referees will be asked to distinguish contributions meeting the above requirements and having an element of novelty, timeliness, and urgency that merits publication in the Journal. We ask referees to help in the selection of articles that have this breadth and suggest that papers covering narrower aspects of the field be sent to journals specializing in those areas. Referee names are not disclosed, but their views are forwarded by the Editor to the authors for consideration. Authors accept full responsibility for the factual accuracy of the data presented and should obtain any authorization necessary for publication. As such the contents of the papers are the sole responsibility of the authors and publication shall not imply the concurrence of the Editors or Publisher. Authors are encouraged to suggest names of several experts in the field when papers are first submitted or at any time in the evaluation process.

PREPARATION OF MANUSCRIPTS

Manuscripts should be printed, double line spaced, one side only, using black type on good quality white paper in a manner that ensures a clean, clear impression on the letters. The corresponding author's full mailing address, including mail codes, phone number, fax number, and e-mail address should be included. Authors are asked to provide four key words, which will be used for indexing purposes. The manuscript should be compiled in the following order: Abstract, Introduction, Results, Discussion, Conclusion, Experimental, References and Notes, Tables, Figures, Schemes, and Legends. Any author who is not fluent in idiomatic English is urged to gain assistance with manuscript preparation. Reviewers are not expected to correct grammatical errors and any deficiency in this area may detract from the scientific content of the paper.

Graphical Abstracts: Authors must supply a graphical abstract at the time the paper is first submitted. The abstract should summarize the contents of the paper in a concise, pictorial form designed to capture the attention of a wide readership and for compilation of databases. Carefully drawn chemical structures are desired that serve to illustrate the theme of the paper. An example can be found in the Journal.

Title: The title should be brief, specific, and rich in informative words. Capitalize the first letter of main words only.

Authors: After one line of space from the title, the authors' names and addresses should be provided on separate lines, centred on the width of the page. The author(s) to whom correspondence should be addressed by readers should be indicated with an asterisk. Use superscript a, b, c, to identify the address of each author when they differ.

Abstract: Authors must include a short abstract. With appropriate spacing this is placed immediately after the authors' address(es) and before the text. The abstract should state briefly the purpose of the research, the principal results, and major conclusion(s).

Articles: Articles should describe original research of high quality and timeliness. In the introductory section of the manuscript, the author should strive to define the significance of the work and the justification for its publication. Any background discussion should be brief and restricted to pertinent material. Following the Introduction the text should be arranged in the following order: Results, Discussion,

Conclusion, and Experimental sections. Each section should be clearly marked with a separate, centred heading.

Reviews: These are specially-commissioned critical reviews of topical importance. Such articles are commissioned in appropriate fields. Authors wishing to submit a nonsolicited review article are requested to first contact Professor C.-H. Wong.

When submitting a review article, authors should submit biographical information for each author as well as a black and white photograph. It should be one paragraph (approximately 150–200 words) and should include: date and place of birth, universities attended, degrees obtained, principal professional posts held, present title, a line or two about the major research interests, and anything else professionally relevant that is of special interest.

Symposia-in-Print: These comprise collections of original research papers (including experimental sections) covering specific topics. Topics for forthcoming symposia are announced in the Journal from time to time. A Guest Editor will invite authors active in the field to submit papers, which are then reviewed and processed for publication by the Guest Editor under the usual refereeing system. Opportunity is also provided for other active investigators to submit contributions.

Acknowledgement: An acknowledgement section may be included, it should be placed after the manuscript text and before the references.

References and Notes: References to the literature must follow the format outlined for ACS publications (Journal of the American Chemistry Society style). Titles of journals are abbreviated according to *Chemical Abstracts Service Source Index*. For a detailed listing of journal abbreviations and citation formats, see: *The ACS Style Guide*; American Chemical Society: Washington, DC, 1986. References should be numbered consecutively as they appear throughout the text, and be indicated consecutively in the text with unparenthesized superscript numbers. Authors are expected to check the original source reference for accuracy. When references concerning related work by the author are quoted and such work is not available to the referee because it is 'in press' or has been submitted to this or other journals, three copies of such work should be submitted with the manuscript for use by the referees and the Editor. Reference to unpublished work is not acceptable, although reference to personal communications is.

Scientific Articles:

1. Barton, D. H. R.; Yadav-Bhatnagar, N.; Finet, J.-P.; Khamsi, J. *Tetrahedron Lett.* **1987**, 28, 3111.

Books:

2. Doe, J. S.; Smith, J. J. In *Medicinal Chemistry*; Roe, P., Ed.; Pergamon: Oxford, 1990; Vol. 1, pp 301–383.

Patent/Chem. Abstract:

3. Lyle, F. R. U.S. Patent 6,973,257, 1995; *Chem. Abstr.* **1995**, 123, 2870.

Meeting Abstract:

4. Prasad, A.; Jackson, P. *Abstracts of Papers, Part 2*, 212th National Meeting of the American Chemical Society, Orlando, FL, Aug 25–29, 1996; American Chemical Society: Washington, DC, 1996; PMSE 189.

Black & White or Color Photographs: High quality glossy prints of black and white photographs (i.e. high contrast gels) can be directly reproduced with inclusion in the manuscript. These should be submitted as originals with each of the original and review copies of manuscripts at the time of submission. Photocopies of such gels are unacceptable.

A limited number of color figures/photographs may be published in the journal at no expense to the author. The criterion for accepting the inclusion of a color figure will be that it must contribute to the scientific and informational content of the published work. Manuscripts with color figures should be submitted with original glossy photographs on all copies of the manuscript. Black and white photocopies of color figures are unacceptable although high quality color copies of color photographs and original figures printed from high-resolution color printers are acceptable for the reviewers copies. Photographs should be submitted in the actual size that is appropriate for either one- or two-column format (8.4- or 17.7-cm width, respectively).

Artwork: Figures, schemes and equations must be cited in the text and numbered in order of appearance with Arabic numerals. Other graphics, such as structures, do not need to be numbered, but please indicate in the text where these are to appear. All graphics (including chemical structures) must be provided at the actual size that they are to appear (single-column width is 8.4 cm, double-column width is 17.7 cm). Please arrange schematics so that they fill the column space (either single or double), so as not to leave a lot of unused white space. Please ensure that all illustrations within a paper are consistent in type, quality and size. Captions should not be included as part of the graphic; instead all captions should be supplied at the end of the text. Reagents and conditions (unless incorporated into the actual schematic) should also be provided as text. All graphics must be labelled with the figure or scheme number, and the corresponding author's name.

To help authors provide actual size graphics, it is suggested that the following settings be used with CSC ChemDrawTM and ISIS DrawTM: font 10 pt Helvetica, chain angle 120°, bond spacing 18% of length fixed length 14.4 pt (0.508 cm), bold width 2.0 pt (0.071 cm), line width 0.6 pt (0.021 cm), margin width 1.6 pt (0.056 cm), and hash spacing 2.5 pt (0.088 cm). Compound numbers should be in boldface. With these settings, to ensure a proper size, the graphic must be printed at 70%. In order to accurately design schematics to print out at the proper width with the reduction, the original drawing cannot exceed a column width of 12.0 cm (for single column) and 25.0 cm (for double column). To produce a double column width landscape mode will need to be used. Layout design is facilitated if authors submit their original artwork in the actual size to be published.

Tables: All tables must have a title appearing at the top. Column headings should be as brief as possible, using abbreviations when necessary. Columns should contain one or two entries only. Do not use vertical lines. Indicate placement of all tables at the relevant point in the text. Tables must be numbered in order of appearance with Arabic numerals. Footnotes to tables should be given letter designations and cited in the table with a superscript letter. The sequence of letters should proceed by line rather than by column. If a footnote is cited both in the text and in a table, insert a lettered footnote in the table to refer to the footnote in the text. Each table should be provided with a descriptive heading, which, together with the individual column headings, should make the table, as nearly as possible, self-explanatory. In setting up tabulations, authors are requested to keep in mind the column widths (8.4 cm and 17.7 cm), and to make the table conform to the limitations of these dimensions.

Experimental Section: Authors should be as concise as possible in experimental descriptions. The Experimental section must contain all the information necessary to guarantee reproducibility. An introductory paragraph containing information concerning solvents, sources of less common starting materials, special equipment, etc. should be provided. The procedures should be written in the past tense and include the weight, mmol, volume, etc. in brackets after the names of the substances or solvents. General reaction conditions should be given only once. The title of an experiment should include the chemical name and compound number of the product prepared; subsequently, this compound should be identified by its number. Details of the work up procedure must be included. Physical and spectroscopic data, including NMR, high-resolution mass analysis, and elemental analysis can be included in the Experimental section or presented in tables.

Biological Data: Biological test methods must be referenced or described in sufficient detail to permit the experiments to be repeated by others. Standard compounds and established drugs/agents should be tested in the same system for comparison. Statistical limits (statistical significance) for the biological data are usually required. If statistical limits cannot be provided, the number of determinations and an indication of the variability and reliability of the results should be given. References to statistical methods of calculation should be included. Doses and concentrations should be expressed in molar quantities when comparisons of potencies are made with compounds having substantial differences in molecular weights. For inactive agents, the highest concentration or dose level tested should be indicated. Detailed descriptions of biological methods should be placed in the Experimental section.

Structural Data: Atomic coordinates for structures of biological macromolecules determined by X-ray, NMR, or other methods should be deposited with the Protein Data Bank (PDB), Chemistry Department, Brookhaven National Laboratories, Upton, Long Island, New York 11973, USA. It is the responsibility of the author to obtain a file name for the macromolecule; the file name must be referenced in the manuscript. Manuscripts will be sent out for review only after receiving a written statement from the author that the coordinates will be deposited. If a manuscript is accepted for publication, and the PDB file name has not yet been obtained, it must be added in the proof prior to publication. Upon written request by the author the PDB will refer requests for coordinates to the originating author, but one year after publication, they will be made generally available upon request. Please address all inquiries about depositing to the PDB.

Nomenclature: It is the responsibility of the authors to provide correct nomenclature. Chemical names for drugs are preferred. If these are not practical, generic names, names approved by the US Adopted Names Council, or those approved by the World Health Organization may be used. If a generic name is used, its chemical name or structure should be provided at the point of first citation. Authors will find the following as useful reference books for recommended nomenclature.

IUPAC Nomenclature of Organic Chemistry; Rigaudy, J.; Klesney, S. P., Eds; Pergamon: Oxford, 1979.

Enzyme Nomenclature; Webb, E. C., Ed.; Academic Press; Orlando, 1984.

Biochemical Nomenclature and Related Documents; The Biochemistry Society; London, 1978.

The ACS Style Guide; Dodd, J. S., Ed.; American Chemical Society: Washington, DC, 1986.

Captions: Captions for figures and schemes should be grouped together separately.

Trademarks: Authors are required to acknowledge trademark protection in the standard fashion (e.g. Selectride[®]) although not for words which have entered general usage (e.g. pyrex).

Hazardous Materials or Procedures: Authors are requested to draw attention to hazards by adding the word CAUTION followed by a brief descriptive phrase and literature references if appropriate.

Characterization of New Compounds: All new compounds should be fully characterized with relevant spectroscopic data. Microanalyses should be included whenever possible. Under appropriate circumstances, high resolution mass spectra may serve in lieu of microanalysis, if accompanied by suitable NMR criteria for sample homogeneity.

X-ray Crystallographic Data: Prior to submission of the manuscript, the author should deposit crystallographic data for organic and metal-organic structures with the Cambridge Crystallographic Data Centre. The data, without structure factors, should be sent by e-mail to: deposit@ccdc.cam.ac.uk, as an ASCII file, preferably in CIF format. Hard copy data should be sent to CCDC, 12 Union Road, Cambridge, CB2 1EZ.

A checklist of data items for deposition can be obtained from the CCDC Home Page on the World Wide Web (<http://www.ccdc.cam.ac.uk/>)

or by e-mail to: fileserv@ccdc.cam.ac.uk, with the one-line message, sendme checklist

The data will be acknowledged, within three working days, with one CCDC deposition number per structure deposited. These numbers should be included with the following standard text in the manuscript: Crystallographic data (excluding structure factors) for the structures in this paper have been deposited with the Cambridge Crystallographic Data Centre as supplementary publication nos. CCDC Copies of the data can be obtained, free of charge, on application to CCDC, 12 Union Road, Cambridge CB2 1EZ, UK, (fax: +44-(0)1223-336033 or e-mail: deposit@ccdc.cam.ac.uk).

Deposited data may be accessed by the journal and checked as part of the refereeing process.

If data are revised prior to publication, a replacement file should be sent to CCDC.

Software: Software used as part of computer-aided drug/agent design (e.g. molecular modeling, QSAR, conformational analysis, molecular dynamics) should be readily available from accepted sources and the authors may specify where the software can be obtained. Assurance of the quality of the parameters employed for the relevant potential functions should be detailed in the manuscript.

Abbreviations: Standard ACS abbreviations should be used throughout the manuscript and are employed without periods. The preferred forms for some of the more commonly used abbreviations are mp, bp, °C, °K, min, h, mL, μ L, g, mg, μ g, cm, mm, nm, mol, mmol, μ mol, M, mM, μ M, ppm, HPLC, TLC, GC, 1 H NMR, GC-MS, HRMS, FABHRMS, UV, IR, EPR, ESR, DNase, ED₅₀, ID₅₀, IC₅₀, LD₅₀, im, ip, iv, mRNA, RNase, rRNA, tRNA, cpm, Ci, dpm, V_{max} , K_m , k , $t_{1/2}$. All nonstandard abbreviations should be defined following the first use of the abbreviation. For a detailed listing of standard abbreviations, see: *The ACS Style Guide*; American Chemical Society: Washington, DC, 1986.

Supplementary Material: Concise supplementary material may be provided for review purposes only. Supplementary material will be published only at the Editor's discretion.

Mailing of Manuscripts: The original and three copies of the manuscript, including the graphical abstract and a signed and dated copyright transfer agreement form, should be sent to the appropriate editorial office, see below. In order to achieve the most rapid publication authors may wish to fax a copy (supplying their own Telephone, Fax and E-mail numbers) to the Editor at the time that they mail the manuscript. Authors may also submit their manuscripts by E-mail (contact the editorial office for details).

All authors must sign the 'Transfer of Copyright' agreement before the article can be published. This transfer agreement enables Elsevier Science Ltd to protect the copyrighted material for the authors, but does not relinquish the author's proprietary rights. The copyright transfer covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform, or any other reproductions of similar nature and translations, and includes the right to adapt the article for use in conjunction with computer systems and programs, including reproduction or publication in machine-readable form and incorporation into retrieval systems. Authors are responsible for obtaining from the copyright holder permission to reproduce any figures for which copyright exists.

Manuscript Production from Diskette Files: To help expedite publication of manuscripts authors are asked to supply their revised manuscript versions both in hardcopy format and on diskette (text files, graphics and the graphical abstract). We can accept most word processor programs, in either Mac or DOS format. In all cases, also save

the text as an ASCII file in case the word processing file is not translatable. It is important that the file on the disk and the printout are identical. Before sending your disk, please ensure that the following information is supplied: name of journal, name of author(s), name(s) of file(s) on disk, computer used (IBM or Mac), and the name and version of program used. Please save graphics as an Encapsulated PostScript file (EPS) or a Tagged Image File Format (TIFF), as well as the program the graphic was originally drawn in. All of the text and tabular material (if any) should be in a single file with the complete text first, followed by the tabular material. If tabular material is present, the column alignment should have been obtained with either the word-processing program's column utility or tabs or spaces, but not a mixture of these. When preparing the manuscript text, use a simple, full-width format with no page-formatting other than margin definitions. Do not include page numbers or other running material. Format the references as stated above. Ensure that all characters are correctly represented throughout the manuscript: for example, 1 (one) and 1 (ell), 0 (zero) and O (oh), x (ex) and \times (times sign).

Submissions from Japan and other Asian countries:

Professor M. Shibasaki
Graduate School of Pharmaceutical Sciences
University of Tokyo
7-3-1 Hongo, Bunkyo-ku
Tokyo 113-0033
JAPAN

FAX: (81) 3 5684 5206
Telephone: (81) 3 5684 0651
E-mail: mshibasa@mol.f.u-tokyo.ac.jp

Submissions from Europe:

Professor H. Waldmann
Department of Chemical Biology
Max-Planck-Institut für Molekulare Physiologie
Otto-Hahn-Strasse 11
44227 Dortmund
Germany
