

Bioorganic & Medicinal Chemistry

Summary of Instructions to Authors

Bioorganic & Medicinal Chemistry publishes Articles, Reviews, and Perspectives reporting experimental or theoretical results of outstanding significance and timeliness in the areas of medicinal chemistry, chemical biology, bioorganic chemistry, bioinorganic chemistry, and related disciplines. These notes are a summary of the full-length Guide for Authors, which is available at <http://www.elsevier.co.uk/locate/bmc>.

Submission of manuscripts

Authors should submit manuscripts to the appropriate regional editor via the online submission page of this journal at <http://ees.elsevier.com/bmc>. The following items should be supplied:

- Manuscript. It is not necessary to embed graphics in the text, but if you do so please note that *separate graphic files will always be required for proof production when a manuscript is accepted for publication*. Graphics should be submitted as separate, high-resolution artwork files. These will be automatically incorporated into the single PDF that the system creates for review.
- Graphical abstract for the contents list (submitted as a separate document).
- Cover letter highlighting the novelty, significance, and urgency of the submitted work, which merits rapid publication; and providing details of other relevant information, e.g., submitted or in press manuscripts.
- List of potential referees (separate document).

The system automatically converts manuscript source files to a single Adobe Acrobat PDF version of the article, which will be used in the review process. A printed copy of the manuscript is not required. All correspondence takes place by e-mail and via the Author's Home Page.

Reviews, Perspectives, and Symposia-in-Print are usually commissioned, but authors wishing to contribute should contact the editorial office.

Manuscript preparation

Manuscripts must be written in English and should be compiled as follows:

- *Graphical Abstract* (maximum 5 × 17 cm). This should summarize the contents of the paper in a concise, pictorial form and may include a short text (maximum 30 words).
- *Title and author names and affiliations*
- *Abstract*. This should briefly state the purpose of the research, the principal results, and major conclusions.
- *Main body of the article*. Text should be subdivided in the simplest possible way. Headings and subheadings should reflect the relative importance of the sections. The experimental section must contain all the information necessary to guarantee reproducibility but authors must be as concise as possible. The

format of the experimental section can be found in the full-length Guide for Authors.

- *Acknowledgments*
- *References and notes*. Authors should consult *The ACS Style Guide*; 2nd ed.; American Chemical Society: Washington, DC, 1997, for a detailed listing of citation formats for journal papers, books, and other publications. Journal titles should be abbreviated according to the *Chemical Abstracts Service Source Index (CASSI) 1907–1999 Cumulative* and its supplement. A list of abbreviations can also be found on the journal home page.
- *Artwork*. Figures and schemes must be provided in electronic format and at the actual size that they are to appear (single-column width is 8.4 cm; double-column width is 17.7 cm). Tagged Image File Format (TIFF) or Encapsulated PostScript (EPS) files are preferred. Color figures may be printed in the journal at no charge to the author if the editor considers that color is necessary to convey scientific information. Color figures should be supplied in electronic format as JPEG files (minimum 300 dots per inch).
- *Supplementary information*. Authors can submit supplementary data to support and enhance their communication. These should be supplied as separate electronic files and will be published online alongside the electronic version of the article on ScienceDirect. Authors may alternatively choose to submit supplementary information as an aid to the referees only.

Journal conventions

X-ray crystallographic data. Prior to manuscript submission, the author should deposit crystallographic data structures with the Cambridge Crystallographic Data Centre (<http://www.ccdc.cam.ac.uk/>).

Structural data. Atomic coordinates for structures of biological macromolecules determined by X-ray, NMR, or other methods must be deposited with the RCSB Protein Data Bank (PDB) prior to publication. Deposition and release information are available at <http://deposit.pdb.org/depoinfo/depofaq.html>.

GenBank/DNA sequence linking. In the final version of the electronic copy, accession numbers in the text can be linked to the appropriate source in the NCBI databases. Please refer to the full-length Guide for Authors for details.

Funding body agreements and policies

Elsevier has established agreements and developed policies to allow authors who publish in Elsevier journals to comply with potential manuscript archiving requirements as specified as conditions of their grant awards. To learn more about existing agreements and policies please visit <http://www.elsevier.com/fundingbodies>.
