Publisher's Note

Elsevier would like to enrich online articles by visualising and providing details of chemical structures defined as the main chemical compounds described in Tetrahedron articles. For this purpose, corresponding mol files can be uploaded via our online submission system.

Submitted mol files will be available for downloading from online articles on ScienceDirect. Elsevier will also generate InChI keys from the mol files and include them in the online articles, which increase the online searchability of the articles e.g. in Google. InChI keys will also be used to link the articles to additional data in Reaxys.

MOL files are currently available online as Supplementary Information for papers:

The InChI keys are also available online under the keywords section:

Keywords: Brevianes; *abeo*-Brevianes; Tiffeneau–Demjanov; Ring expansion
