

# Subject Index

## Volume 12

### A

- O*-Acetyl-2-acetylpyridineketoxime
  - Zn<sup>2+</sup>-catalyzed ester hydrolysis, biomolecular role of hydroxozinc(II) ion, 177
- Acetylcholinesterase
  - inhibition by organophosphorus compounds, reactivation, and aging: stereoselectivity effects, 259
- Acridinium cations
  - C-9 substituted, reduction by 1,4-dihydro-nicotinamides, kinetics, 141
- Adenine
  - prebiotic synthesis from HCN oligomerization, 8
- Adenosine triphosphate
  - analogs, and modified tryptophanylade-nylates, analysis of tryptophanyl-tRNA synthetase mechanism (yeast), 18
  - regenerated, and arginine, arginine phosphate enzymatic synthesis, 170
- Alcohol dehydrogenase
  - NAD<sup>+</sup> analog covalent fixation, holode-hydrogenase preparation, 45
- Arginine phosphate
  - enzymatic synthesis from arginine and regener-ated ATP, 170
- Aryl- $\beta$ -D-glycopyranosides
  - acid and enzymatic hydrolysis,  $\alpha$ -deuterium isotope kinetic effects, 158
- Ascorbate
  - and ninhydrin and nitrite: Ruhemann's purple formation, 235
- Aspartic acid
  - free and peptide-bound, racemization rates *in vitro* and *in vivo*, pH effect (human dentin, ocular lens nucleus), 349
- ATP, *see* Adenosine triphosphate

### B

- Bis(acyloxymethyl) phosphotriesters
  - synthesis and stability, 118
- Butyrylcholinesterase, *see* Cholinesterase

### C

- Cholinesterase
  - inhibition by organophosphorus compounds, reactivation, and aging: stereoselectivity effects, 259
- Cobyrinic acid
  - uro'gen III methylation sequence, timing in vitamin B<sub>12</sub> biosynthesis (*Propioni-bacterium shermanii*), 356
- Copper
  - mediated reduction of cytochrome *c* by thio-glycolic acid (equine heart), 71
- Creatine kinase
  - trans*-2-imino-1,3-diazabicyclo[3.3.0]octane-8-carboxylic acid analysis, 221
- Cyclization
  - enzymatic, *trans,trans*-farnesyl pyrophosphate to pentalenene (*Streptomyces* UC5319), 312
- $\beta$ -Cyclodextrin
  - covalent linkage with thiazolium salts, thi-amine-dependent enzyme mimic prepara-tion, 206
- Cyclodextrins
  - binding process, analysis, 130
- Cytochrome *c*
  - metal-mediated reduction by thioglycolic acid (equine heart), 71

### D

- Desaturase
  - role in sex pheromone biosynthesis (moths), 279
- $\alpha$ -Deuterium
  - isotope, kinetic effects for acid and enzymatic hydrolysis of aryl- $\beta$ -D-glycopyranosides, 158
- 1,4-Dihydronicotinamides
  - reduction of C-9 substituted acridinium cat-ions, kinetics, 141

## E

- Enzyme mimics  
 thiamine-dependent, preparation by thiazolium salt covalent linkage with  $\beta$ -cyclodextrin, 206
- Ethyl benzoylformate  
 asymmetric reduction by chiral NADH model compounds: mechanistic and stereochemical considerations, 299

## F

- trans,trans*-Farnesyl pyrophosphate  
 enzymatic cyclization to pentalenene (*Streptomyces* UC5319), 312
- Fatty acids  
 unsaturated, precursors, role in sex pheromone biosynthesis (moths), 279
- Fluoroacetate  
 plasmid-coated, dehalogenation, stereochemical analysis (*Pseudomonas* sp.), 197
- Fungi  
*Aspergillus foetidus*, *A. niger*, *Helminthosporium* sp., and *Mortierella isabellina*: biotransformation of organic selenides, 1

## H

- Haloacetate dehalogenase  
 plasmid-coated fluoroacetate dehalogenation, stereochemical analysis (*Pseudomonas* sp.), 197
- Haloacetate halidohydrolase. *see* Haloacetate dehalogenase
- Hemoglobin  
 tense structure, detection with 5-thio-2-nitrobenzoate circular dichroism marker (bovine), 242
- Histidine  
 and derivatives, ionization constants and thermodynamic parameters, 34
- Histidine decarboxylase  
 mechanism-based inhibition by  $\alpha$ -trifluoromethylhistamine (hamster placenta; mouse, rat stomach), 91
- Holodehydrogenases  
 preparation by covalent fixation of NAD<sup>+</sup> analogs to alcohol and lactate dehydrogenase, 45
- Hydrogen cyanide  
 oligomerization, adenine prebiotic pathway, 8

## Hydrolysis

- acid and enzymatic, aryl- $\beta$ -D-glycopyranosides,  $\alpha$ -deuterium isotope kinetic effects, 158

## ester

- O*-acetyl-2-acetylpyridineketoxime, Zn<sup>2+</sup>-catalyzed, biomolecular role of hydroxozinc(II) ion, 177
- p*-nitrophenyl acetate, oximinatozinc(II)-catalyzed, 188

## Hydroxozinc(II)

- biomolecular role in Zn<sup>2+</sup>-catalyzed ester hydrolysis of *O*-acetyl-2-acetylpyridineketoxime, 177

## 4-Hydroxy-2-ketoglutarate aldolase

- condensation reaction, substrate specificity (rat liver), 229

## I

## Imidazole

- derivatives, from HCN oligomerization, isolation and characterization as prebiotic adenine synthesis precursors, 8

*trans*-2-Imino-1,3-diazabicyclo[3.3.0]octane-8-carboxylic acid

- synthesis and investigation with creatine kinase, 221

## Ionization

- constants, histidine and derivatives, 34

## Iron

- mediated reduction of cytochrome *c* by thioglycolic acid (equine heart), 71

## Isomerization

- Z*-*E*, *Z*-3-methyl-3-pentenyl pyrophosphate, 58

## Isopentenyl pyrophosphate isomerase

- artificial substrates, *Z*-*E* isomerization (porcine liver), 58

## Isotopes

- $\alpha$ -deuterium, kinetic effects for acid and enzymatic hydrolysis of aryl- $\beta$ -D-glycopyranosides, 158

## K

 $\beta$ -Keto esters

- reduction by competing D- and L-lactic dehydrogenases, kinetics, quantitative analysis (*Saccharomyces cerevisiae*), 98

## Kinetics

## reduction of

C-9 substituted acridinium cations by 1,4-dihydronicotinamides, 141

$\beta$ -keto esters by competing D- and L-lactic dehydrogenases, quantitative analysis (*Saccharomyces cerevisiae*), 98

## L

## Lactate dehydrogenase

D- and L-isozymes, competing reduction of  $\beta$ -keto esters, kinetics, quantitative analysis (*Saccharomyces cerevisiae*), 98

NAD<sup>+</sup> analog covalent fixation, holodehydrogenase preparation, 45

## M

## Magnesium ion

and Mn<sup>2+</sup>, complexes with geranyl and neryl pyrophosphate: role in monoterpene enzymatic biosynthesis, 329

## Manganese ion

and Mg<sup>2+</sup>, complexes with geranyl and neryl pyrophosphate: role in monoterpene enzymatic biosynthesis, 329

## Methylation

sequence between uro'gen III and cobyrinic acid, timing in vitamin B<sub>12</sub> biosynthesis (*Propionibacterium shermanii*), 356

## Z-3-Methyl-3-pentenyl pyrophosphate

Z-E isomerization, 58

## Monoterpenes

enzymatic biosynthesis, role of Mg<sup>2+</sup> and Mn<sup>2+</sup> complexes with geranyl and neryl pyrophosphate, 329

## N

NAD<sup>+</sup>, *see* Nicotinamide adenine dinucleotide

NADH, *see* Nicotinamide adenine dinucleotide

## Nicotinamide adenine dinucleotide

oxidized, analogs, covalent fixation to alcohol and lactate dehydrogenase, holodehydrogenase preparation, 45

reduced, chiral model compounds, asymmetric reduction of ethyl benzoylformate: mechanistic and stereochemical considerations, 299

## Ninhydrin

and ascorbate and nitrite: Ruhemann's purple formation, 235

## Nitrite

and ascorbate and ninhydrin: Ruhemann's purple formation, 235

*p*-Nitrophenyl acetate

oximinatozinc(II)-catalyzed ester hydrolysis, 188

## O

## Oligomerization

HCN solutions, prebiotic adenine synthesis, 8

## L-Ornithine

decarboxylation with ornithine decarboxylase, stereochemistry (murine kidney), 252

## Ornithine decarboxylase

decarboxylation of L-ornithine, stereochemistry (murine kidney), 252

## Oxidation

organic selenides by fungi, 1

## Oximinatozinc(II)

-catalyzed ester hydrolysis of *p*-nitrophenyl acetate, 188

## P

## Pentalenene

enzymatic formation from *trans,trans*-farnesyl pyrophosphate (*Streptomyces* UC5319), 312

## Pentalenene synthetase

cyclization of *trans,trans*-farnesyl pyrophosphate to pentalenene (*Streptomyces* UC5319), 312

## Peptides

-bound and free aspartic acid and serine, racemization rates *in vitro* and *in vivo*, pH effect (human dentin, ocular lens nucleus), 349

## pH

effect on racemization of free and peptide-bound aspartic acid and serine *in vitro*, 349

## Pheromones

sex, *see* Sex pheromones

## Phosphates

bioreversible protective esters, synthesis and stability, 118

5-Phosphorylribose 1- $\alpha$ -diphosphate

analog: 5-phosphorylribose 1- $\alpha$ -methylenebisphosphonate, synthesis, purification, and

- characterization (*Salmonella typhimurium*), 339
- 5-Phosphorylribose 1- $\alpha$ -methylenebisphosphonate  
synthesis, purification, and characterization (*Salmonella typhimurium*), 339
- Pyrophosphate  
geranyl and neryl, complexes with  $Mg^{2+}$  and  $Mn^{2+}$ : role in monoterpene enzymatic biosynthesis, 329
- R**
- Racemization  
free and peptide-bound aspartic acid and serine *in vitro* and *in vivo*, pH effect (human dentin, ocular lens nucleus), 349
- Reduction  
asymmetric, ethyl benzoylformate by chiral NADH model compounds: mechanistic and stereochemical considerations, 299  
C-9 substituted acridinium cations by 1,4-dihydronicotinamides, kinetics, 141  
 $\beta$ -keto esters, by competing D- and L-lactic dehydrogenases, kinetics, quantitative analysis (*Saccharomyces cerevisiae*), 98
- Ruhemann's purple  
formation from ascorbate, ninhydrin, and nitrate, 235
- S**
- Selenides  
organic, biotransformation by fungi, 1
- Serine  
free and peptide-bound, racemization rates *in vitro* and *in vivo*, pH effect (human dentin, ocular lens nucleus), 349
- Sex pheromones  
components, biosynthesis and evolutionary relationships among species (moths), 279
- Stereochemistry  
ethyl benzoylformate asymmetric reduction by chiral NADH model compounds, 299
- Stereoselectivity  
effects on acetylcholinesterase and butyrylcholinesterase inhibition by organophosphorus compounds, reactivation, and aging, 259
- T**
- Thiamine  
-dependent enzyme mimics, preparation by thiazolium salt covalent linkage with  $\beta$ -cyclodextrin, 206
- Thiazolium salts  
covalent linkage with  $\beta$ -cyclodextrin, thiamine-dependent enzyme mimic preparation, 206
- Thioglycolic acid  
metal-mediated reduction of cytochrome c (equine heart), 71
- 5-Thio-2-nitrobenzoate  
circular dichroism marker, detection of bovine hemoglobin tense structure, 242
- $\alpha$ -Trifluoromethylhistamine  
mechanism-based inhibition of histidine decarboxylase (hamster placenta; mouse, rat stomach), 91
- Tryptophanyl-adenylates  
analogues, and ATP analogues, analysis of tryptophanyl-tRNA synthetase mechanism (yeast), 18
- Tryptophanyl-tRNA synthetase  
mechanism, analysis by tryptophanyl-adenylate and ATP analogues (yeast), 18
- U**
- Uro'gen III  
-cobyric acid methylation sequence, timing in vitamin B<sub>12</sub> biosynthesis (*Propionibacterium shermanii*), 356
- V**
- Vitamin B<sub>12</sub>  
biosynthesis, timing of methylation sequence between uro'gen III and cobyrinic acid (*Propionibacterium shermanii*), 356
- Y**
- Yeast  
*Saccharomyces cerevisiae*  
reduction of  $\beta$ -keto esters, stereochemical control by competing enzyme systems, kinetics, quantitative analysis, 98  
tryptophanyl-tRNA synthetase, mechanism, analysis by tryptophanyl-adenylate and ATP analogues, 18
- Z**
- Zinc ion  
-catalyzed ester hydrolysis of *O*-acetyl-2-acetylpyridineketoxime, biomolecular role of hydroxozinc(II) ion, 177
