

INTRODUCTION

In April 1995, a 2-day symposium entitled "Whither Enzymology?" was held at Harvard University to honor Jeremy R. Knowles on the occasion of his 60th birthday. The oral and poster presentations, without exception, reflected the breadth of Jeremy's scientific interests and his attention to detail, as well as the sincere desire of former students and postdoctorals to warmly acknowledge and thank a highly respected scientific mentor. This volume represents a continuation of our tribute to Jeremy's contribution to science and his role as a teacher. It was conceived and organized along with the symposium but stands separately. Like the symposium, the articles contained in this issue illustrate the many fields of science into which former Knowles group members have ventured. We hope that it also reflects some of his influence over the way that we approach science and the high standard of scientific training that we were privileged to receive. The following people are gratefully acknowledged for their hard work and generosity in helping to organize this celebration: Joshua Boger, Carol Gonzaga, Gordon Hamilton, David Hansen, Jane Knowles, Elizabeth Komives, Jed Fisher, Peter Leadlay, and James Staros.
