

Bioorganic Chemistry

Volume 32, Number 1, February 2004

CONTENTS

David J. Davies, Rüdiger Faust, Peter J. Garratt, Cécile Marivingt-Mounir, Kathryn Davidson, Muy-Teck Teh, and David Sugden. Binding affinity and biological activity of oxygen and sulfur isosteres at melatonin receptors as a function of their hydrogen bonding capability	1
Nicole Zimmermann, Eric Meggers, and Peter G. Schultz. A second-generation copper(II)-mediated metallo-DNA-base pair	13
Yasuo Nomura, Takayasu Kubozono, Makoto Hidaka, Mineko Horibe, Naoki Mizushima, Nobuyuki Yamamoto, Toshio Takahashi, and Makoto Komiyama. Predominant role of basicity of leaving group in α -effect for nucleophilic ester cleavage	26
Revital Yefidoff, Limor Weiss, David Avisar, and Amnon Albeck. 13-Demethyl-13-substituted-13,14-dihydroretinols as potential affinity labels of retinol-binding proteins: syntheses and stability studies	38
Mark W. Ruszczycky and Vernon E. Anderson. Tartrate dehydrogenase reductive decarboxylation: stereochemical generation of diastereotopically deuterated hydroxymethylenes	51
