

SUBJECT INDEX TO VOLUME 11

- α -Helix, electrostatic potential and helix dipole of, 133
- α -Lactalbumin, tryptophyl fluorescence study of, 217
- Activity coefficient, influence of self-association on, 71
- 5'-Adenosine monophosphate, interaction with caffeine studied by NMR, 109
- Allosteric protein, theory of pattern formation by, 183
- Allosteric protein, theory of pattern formation by, 191
- Aminocacyl transferase, study of oligomers by sedimentation, 61
- Arginine decarboxylase, study of oligomers by sedimentation, 61
- β -Lactoglobulin, study of oligomers by sedimentation, 61
- Binding reaction, to met-hemoglobine, 23
- Caffeine, NMR studies of interaction with AMP and poly-(rA), 109
- Caffeine, NMR studies of interaction with DNA, 121
- Calorimetry, hydration studies of uracil, thymine and derivatives, 17
- Casein, flocculation kinetics of micelles of, 147
- Charged polystyrene spheres, ordered structure formation in concentrated suspensions, 411
- Circular dichroism, of chemically modified met-myoglobin, 29
- Circular dichroism, of core particles, 83
- Conductometry, binding studies of counterions to polyelectrolytes, 91
- Conformational changes, rates in weak polyelectrolyte solutions, 425
- Conformational transitions, of hydrophobic polyacids, 387
- Conformational transitions, of hydrophobic polyacids, 397
- Conformation, of trinucleoside diphosphate studied by NMR, 283
- Core particle, thermal transition of, 83
- Counterion condensation, influence on dichroism of DNA, 167
- Counterion condensation, influence on electric dichroism of nucleic acids, 157
- deoxy-Hemoglobin, Jahn–Teller effect in, 39
- deoxy-Myoglobin, Jahn–Teller effect in, 39
- Detergent micelles, effect of NaCl concentration on size and shape, 417
- Dielectric dispersion, of maleic acid copolymers neutralized with mixtures of sodium and calcium hydroxides, 403
- Dielectric relaxation, of DNA at low frequencies, 309
- Dielectric spectrometry, new technique for highly conducting polyelectrolyte solutions, 317
- Dilatometry, of met-hemoglobin, 23
- Dipole moment, of α -helix, 133
- Distamycin A, thermal denaturation of DNA complexes with, 233
- DNA, conformation on mercury electrode, 1
- DNA, counterion induced collapse of, 339
- DNA, electric dichroism of, 167
- DNA, flexibility due to thermal fluctuations, 321
- DNA, low angle light scattering of T7, 295
- DNA, low frequency dielectric relaxation of, 309
- DNA, NMR studies of interaction with caffeine, 121
- DNA, spontaneous and ligand induced distortions, 329
- DNA, thermal denaturation of distamycin A complexes of, 233
- Dynamic light scattering, of ribonuclease, 439
- Electric birefringence, of ionized polypeptides, 369
- Electric dichroism, of DNA, 167
- Electric dichroism, of nucleic acids, 157
- Electrostatic potential, of α -helix, 133
- Enthalpies of hydration, of uracil, thymine and derivatives, 17
- Enzymatic activity, mechanism for glyoxalase I, 265
- Enzyme reactions, kinetics of clotting processes, 137
- Enzyme reactions, theory for kinetics of, 9
- F-Actin, flexibility of, 443
- F-Actin, theory of myosin binding to, 271

- Flocculation, kinetic of enzyme triggered, 147
 Fluorescence, of tryptophan in α -lactalbumin, 217
- Glyoxalase I, mechanism of enzymatic activity, 265
- Helix-coil transition, effect of high electric fields on, 369
- Hydrophobic polyacids, conformational transitions, 387
- Hydrophobic polyacids, thermodynamics of ionization and conformational transitions, 397
- Hyperchromicity, thermal denaturation study of distamycin A-DNA complexes by, 233
- Isoelectric focusing, theory for determination of ligand binding constants by, 249
- Jahn-Teller effect, in biomolecules, 39
- Kinetics, of enzyme triggered casein micelles flocculation, 147
- Kinetics, of enzymic clotting processes, 137
- Kinetics, of reconstitution of dissociated lactic dehydrogenase, 257
- Kinetics, theory for enzyme reactions, 9
- Lactic dehydrogenase, kinetics of reconstitution for pressure dissociated, 257
- Ligand-binding constants, theory for determination by isoelectric focusing, 249
- Light scattering, of monodisperse polymers, 435
- Light scattering, of T7 DNA, 295
- Lysozyme, self association of, 71
- Maleic acid-isobutyl vinyl ether copolymer, binding of $(\text{Bu}_4\text{N})^+$ studied by conductometry, 91
- Membrane biophysics, of chemoreception and taxis in the plasmodium of *Physarum polycephalum*, 461
- Membrane potential, fluctuation in, 101
- met-Hemoglobin, volume changes on binding of azide ion to, 23
- met-Myoglobin, spectroscopy of chemically modified, 29
- Molecular weight determination, from sedimentation velocity, 303
- Myosin, theory of binding to F-actin, 271
- Nerve membranes, non-linear dielectric properties of, 447
- NMR, conformation studies of trinucleoside diphosphates, 283
- NMR, studies of caffeine-AMP and poly-(rA) interactions by, 109
- NMR, studies of caffeine-DNA interactions, 121
- Nucleic acid bases, enthalpies of hydration, 17
- Nucleic acids, orientation by electric fields, 157
- Paramecium, membrane potential fluctuations in, 101
- Pattern formation, theory of formation of structures, 191
- Pattern regulation, theory of formation of structures, 183
- Phosphoglycerate kinase, time resolved tryptophyl-fluorescence spectroscopy, 239
- Polarography, of DNA, 1
- Polyelectrolyte catalysis, critique of, 433
- Polyelectrolytes, binding of counterions to, 91
- Polyelectrolytes, relation between Poisson-Boltzmann model and condensation hypothesis, 353
- Polyelectrolytes, release of monovalent counterions by addition of divalent counterions, 345
- Polyelectrolytes, theory for potentiometric titration of, 199
- Polyelectrolytes, theory of dielectric increment due to distortion of counterion distribution, 361
- Polypeptide helix-coil transitions, kinetics of, 377
- Poly-(rA), interaction with caffeine studied by NMR, 109
- Proteins, sedimentation of oligomers of, 49
- Reconstitution reaction, of pressure dissociated lactic dehydrogenase, 257
- Ribonuclease, dynamic light scattering of, 439
- Scanning gel chromatography, computer simulation of time difference, 173
- Sedimentation coefficient determination, from sedimentation velocity, 303
- Sedimentation, of aggregated proteins, 49
- Sedimentation, of aggregated proteins, 61
- Sedimentation velocity, determination of sedimentation coefficient and molecular weight by, 303
- Self-association, of lysozyme, 71
- Stereospecificity, of glyoxalase I enzyme activity, 265
- Stochastic theory of kinetics, for enzyme reactions, 9
- Succinic semialdehyde dehydrogenase, study of oligomers by sedimentation, 61

- Thermal denaturation, of distamycin A—DNA complexes, 233
- Thermal transition, of core particles, 83
- Time difference scanning gel chromatography; computer simulation, 173
- Time resolved tryptophyl fluorescence, of phosphoglycerate kinase, 239
- Titration equation, theory for linear polyelectrolytes, 199
- Trinucleoside diphosphates, conformation studies by NMR, 283
- Tryptophyl fluorescence, in α -lactalbumin, 217
- Tryptophyl fluorescence, time resolved spectroscopy of phosphoglycerate kinase, 239
- UV-spectroscopy, of chemically modified met-myoglobin, 29
- Voltammetry, of DNA, 1
