

SUBJECT INDEX TO VOLUME 12

- Active transport, two enzyme, 93, 107
- Aggregation, of chlorophylls in monolayers, 189
- Amino acids, electrooxidation of, 159
- Association, of protein P18 to polysheaths, 307
- Attenuated equilibrium constant models, for self-association, 199

- Chemical relaxations, voltage dependencies of, 51
- Chlorophylls, aggregation in monolayers of, 189
- Chlorophyll, dichroism and polarized fluorescence in liquid crystal solutions, 83
- Chromatography, bio-gel, 299
- Chromatography, theory for distribution of macromolecule between mobile and stationary phases, 271
- Chymotrypsin, model for primary specificity, 13
- Cooperativity, for phase transitions, 167
- Covalent assembly, theoretical model for immunoglobins, 243
- Critical spherical shell, of enzyme molecule, 255, 265
- Crystal violet, metachromasy when bound to poly(α -L-glutamic acid), 235
- Current fluctuations, in discrete transport systems far from equilibrium, 63

- Dextran sulfate, transference numbers, mobility and charge fraction of polyion in solutions of, 323
- Dichroism, of chlorophylls dissolved in liquid crystals, 83
- Dielectric behavior, of linear polyelectrolytes, 329
- Dielectric saturation, in planar electric double layers, 215
- Dipole moment, of linear polyelectrolytes, 329
- DNA, fluorescence depolarization of ϕ 29, 177
- Double layers, effect of dielectric saturation in, 215
- Double layers, theory for interaction between, 317

- Electron microscopy, size distribution of protein P18 associates, 307
- Enzymatic reactions, critical spherical shell in, 265
- Enzymatic reactions, diffusion controlled effects in, 255

- Ethidium bromide, time resolved fluorescence of DNA bound, 177

- FAD, fluorescence when bound to lipoamide dehydrogenase, 35
- Fluctuations, in steady state systems far from equilibrium, 63
- Fluorescence depolarization of viral ϕ 29 DNA, 177
- Free energy conversion, in biochemical system, 285

- Glycolysis, oscillations and efficiency in, 285
- GTP, hydrolysis at microtubule ends, 121

- Hemoglobins, magnetic circular dichroism spectroscopy of, 143
- Hemoglobin, self-association of, 271
- Hydrogen exchange, in hydrated films of proteins, 279
- Hydrolysis, at microtubule ends, 121
- Hydrophobic ions transport through membranes, current noise of, 1

- Immunoglobins, covalent assembly, 243
- Inositol hexaphosphate, influence on magnetic circular dichroism of hemoglobins, 143
- Interaction, theory for electric double layer, 317
- Ion transport through membranes, current noise of, 21

- Kinetics, of enzyme reactions, 255, 265
- Kinetics, of FAD-fluorescence in lipoamide dehydrogenase, 35
- Kinetics, of microtubule formation, 121
- Kinetics, of pyrene fluorescence decay in membranes 341
- Kinetic of slow chemical reactions, influence of applied potential, 51

- Lac repressor core, hydrogen exchange in films of, 279
- Light scattering, study of association of protein in P18 to polysheaths, 307
- Lipid bilayer membranes, current noise due to ion transport, 1, 21

- Lipid vesicles, interaction with myelin proteins, 133
Lipoamide dehydrogenase, rapid relaxation processes of, 35
- Magnetic circular dichroism, of hemoglobins, 143
Membranes, passive transport through, 223
Metachromasy, of crystal violet–poly(α -L-glutamic acid) complexes, 235
Microcalorimetry, reaction catalysed by pyruvate kinase, 73
Microtubules, hydrolysis at ends of, 121
Mobility, of polyion in dextran sulfate solutions, 323
Myelin proteins, interaction with lipid vesicles, 133
- NMR relaxation, interaction of protein interaction with lipid vesicles studied by, 133
Noise spectrum, due to transport of hydrophobic ions through membranes, 1, 21
- Oscillations, in biochemical systems, 285
Osmotic pressure, measurements on polyacrylamide gels, 291
Osmotic pressure, of red blood cells treated with ionophore, 57
Oxydation, of amino acids, 159
- Passive transport, through membranes, 223
Phase transitions, cooperativity in, 167
pH gradient, in two enzyme active transport, 93
Polarized fluorescence, of chlorophylls dissolved in liquid crystals, 83
Polyacrylamide, osmotic behaviour of, 299
Polyelectrolytes, dielectric behavior of linear, 329
Poly(α -L-glutamic), metachromasy of crystal violet bound to, 235
Proteins, hydrogen exchange in films of, 279
Protein P18, cooperative association, 307
Pump, active transport, 107
Pyrene, fluorescence decay in membranes, 341
Pyruvate kinase, microcalorimetry of reaction catalysed by, 73
- Quantum-chemical study, of chymotrypsin primary specificity, 13
- Red blood cells, osmotic pressure, 57
- Self-associated, of hemoglobin, 271
Self-association, theoretical analysis of indefinite, 199
Spin state population, in human hemoglobins, 143
- Thermodynamic nonideality, influence on partition in chromatography, 271
Time resolved fluorescence, of ethidium bromide bound to DNA, 177
Time resolved fluorescence, of FAD bound to lipoamide dehydrogenase, 35
Time resolved fluorescence, of pyrene in membranes, 341
Transference numbers, of polyion in dextran sulfate solutions, 323
- Voltage dependencies, of slow chemical relaxations, 51
