## **ERRATUM**

## **BIOPHYSICAL CHEMISTRY VOL. 20 (1984)**

p. 66, column 1, lines 1-3, which read:

and  $A_{\beta}$ ,  $B_{\beta}$ ,...,  $H_{\beta}$ , respectively. For horse hemoglobin, their amino acid sequences are known as [22,24]

should be sited on p. 65, below the legend to fig. 4

## CORRIGENDUM

## **BIOPHYSICAL CHEMISTRY VOL. 19 (1984)**

p. 379, fig. 1: the values of the parameter should read:  $\Omega/D = 1.75$  and 4.4 instead of  $\Omega/D = 1 \times 10^3$  and  $2.5 \times 10^2$ , respectively. However, these values (17.5 and 4.4) are inadequate for the bacterial motor. They should be of the order of  $10^2$  or  $10^3$  as mentioned in the text. In that case the adequate range of Dt is 0-0.05. However, the essential feature of the figure is the same.
