

Foreword

Symposium Papers
9th International Biophysics Congress IUPAB
Jerusalem, Israel
August 23–28, 1987

The papers included in this special issue of Biophysical Chemistry constitute part of the invited Symposium Lectures presented at the 9th International Biophysics Congress of the International Union for Pure and Applied Biophysics (IUPAB) in Jerusalem, Israel, August 23–28, 1987. Although these contributions convey the flavor and the problematics of the current biophysical scene, they are but a small part of a much larger presentation offered at a stimulating biophysical gathering.
