Page 113: The two sentences beginning at line 4 of the left column should read:

It can be shown that in line with the free orientation of chromophores in an isotropic environment, where the purely orientational contributions follow the relationship $\Delta A_{\text{OR}}^{\parallel} = -2 \cdot \Delta A_{\text{OR}}^{\perp}$, the vesicle ge-

ometry and the $\text{HO} \rightleftharpoons \text{HI}$ transition model is also characterized as

$$\Delta A_{\text{OR}}^{\perp} = -2 \cdot \Delta A_{\text{OR}}^{\parallel} \quad (9)$$

and the magic angle σ^* (where $A_{\text{OR}}^{\sigma^*} = 0$) of the HI pore model is also $\sigma^* = 54.7^\circ$.
