

Subject Index to Volume 81

β -glycosidase

Frequency domain fluorometry; Thermophilic enzyme; Enzyme activity; Archaeon (D'Auria, S. (81) 23)

1,3-propanediol

Excimer method; Phase transition; Interdigitated gel structure; Interaction free energy; Formamide (Li, S.J. (81) 191)

Archaeon

β -glycosidase; Frequency domain fluorometry; Thermophilic enzyme; Enzyme activity (D'Auria, S. (81) 23)

Binding

Two-dimensional lattice model; Cooperativity; Scatchard plot; Protein–nucleic acid interactions; Ising model (Kong, Y. (81) 7)

BSA

Fluorescence; Probe; Calcium; Data analysis; Mag-Indo-1 (Ribou, A-C. (81) 179)

Calcium

Data analysis; Mag-Indo-1; BSA; Fluorescence; Probe (Ribou, A-C. (81) 179)

Capacitance

Microvolt technique; Maximal thinning; Spontaneous emulsification; Modified cholesterol; Lipid bilayer; Hydrophobic thickness (Knudsen, P.J. (81) 143)

Catalytic activity

Immobilized enzymes; Disorder (Hubbard, J.B. (81) 81)

Cholesterol

Subgel; Interdigitation; DSC; Fluorescence; Phospholipid (Rosser, M.F.N. (81) 33)

Clathrate formation

Substrate binding; Sorption cooperativity; Protein hydration; Hydration history effect (Gorbachuk, V.V. (81) 107)

Cooperativity

Scatchard plot; Protein–nucleic acid interactions; Ising model; Binding; Two-dimensional lattice model (Kong, Y. (81) 7)

Cryofocusing

Reaction intermediates; Hemoglobin; Models of cooperativity (Perrella, M. (81) 157)

Cryogenic transmission electron microscopy

Fluorescence microscopy; X-ray scattering; DNA–lipid complexes; Melting; DNA–mixed liposomes complexes; DNA compaction and condensation (Mel'nikova, Y.S. (81) 125)

Cu,Zn superoxide dismutase

Structure–function relationship; Transition temperature; Dynamical cross-correlation; Molecular dynamics simulation (Falconi, M. (81) 197)

Darcy constant

Model; Strand diameter; Fibrin gels (Nestler, F.H.M. (81) 1)

Data analysis

Mag-Indo-1; BSA; Fluorescence; Probe; Calcium (Ribou, A-C. (81) 179)

Debye function

Wormlike chain; Persistence length; Excluded volume effect; Small angle X-ray scattering; Poly(methacrylic acid) (PMA) (Muroga, Y. (81) 45)

Disorder

Catalytic activity; Immobilized enzymes (Hubbard, J.B. (81) 81)

DNA

Metaphase chromosome preparations; Extinction measurements; Thermal denaturation (Wolf, D. (81) 207)

DNA compaction and condensation

Cryogenic transmission electron microscopy; Fluorescence microscopy; X-ray scattering; DNA-lipid complexes; Melting; DNA-mixed liposomes complexes (Mel'nikova, Y.S. (81) 125)

DNA-lipid complexes

Melting; DNA-mixed liposomes complexes; DNA compaction and condensation; Cryogenic transmission electron microscopy; Fluorescence microscopy; X-ray scattering (Mel'nikova, Y.S. (81) 125)

DNA-mixed liposomes complexes

DNA compaction and condensation; Cryogenic transmission electron microscopy; Fluorescence microscopy; X-ray scattering; DNA-lipid complexes; Melting (Mel'nikova, Y.S. (81) 125)

DSC

Fluorescence; Phospholipid; Cholesterol; Subgel; Interdigitation (Rosser, M.F.N. (81) 33)

Dynamical cross-correlation

Molecular dynamics simulation; Cu,Zn superoxide dismutase; Structure-function relationship; Transition temperature (Falconi, M. (81) 197)

Enzyme activity

Archaeon; β -glycosidase; Frequency domain fluorometry; Thermophilic enzyme (D'Auria, S. (81) 23)

Excimer method

Phase transition; Interdigitated gel structure; Interaction free energy; Formamide; 1,3-propanediol (Li, S.J. (81) 191)

Excluded volume effect

Small angle X-ray scattering; Poly(methacrylic acid) (PMA); Debye function; Wormlike chain; Persistence length (Muroga, Y. (81) 45)

Extinction measurements

Thermal denaturation; DNA; Metaphase chromosome preparations (Wolf, D. (81) 207)

Fibrin gels

Darcy constant; Model; Strand diameter (Nestler, F.H.M. (81) 1)

Fluorescence

Probe; Calcium; Data analysis; Mag-Indo-1; BSA (Ribou, A-C. (81) 179)

Fluorescence

Phospholipid; Cholesterol; Subgel; Interdigitation; DSC (Rosser, M.F.N. (81) 33)

Fluorescence energy transfer

Hemoglobin; Liposomes; Protein-lipid complexes (Gorbenko, G.P. (81) 93)

Fluorescence microscopy

X-ray scattering; DNA-lipid complexes; Melting; DNA-mixed liposomes complexes; DNA compaction and condensation; Cryogenic transmission electron microscopy (Mel'nikova, Y.S. (81) 125)

Formamide

1,3-propanediol; Excimer method; Phase transition; Interdigitated gel structure; Interaction free energy (Li, S.J. (81) 191)

Frequency domain fluorometry

Thermophilic enzyme; Enzyme activity; Archaeon; β -glycosidase (D'Auria, S. (81) 23)

Hemoglobin

Models of cooperativity; Cryofocusing; Reaction intermediates (Perrella, M. (81) 157)

Hemoglobin

Liposomes; Protein-lipid complexes; Fluorescence energy transfer (Gorbenko, G.P. (81) 93)

Hydration history effect

Clathrate formation; Substrate binding; Sorption cooperativity; Protein hydration (Gorbachuk, V.V. (81) 107)

Hydrophobic thickness

Capacitance; Microvolt technique; Maximal thinning; Spontaneous emulsification; Modified cholesterol; Lipid bilayer (Knudsen, P.J. (81) 143)

Immobilized enzymes

Disorder; Catalytic activity (Hubbard, J.B. (81) 81)

Interaction free energy

Formamide; 1,3-propanediol; Excimer method; Phase transition; Interdigitated gel structure (Li, S.J. (81) 191)

Interdigitated gel structure

Interaction free energy; Formamide; 1,3-propanediol; Excimer method; Phase transition (Li, S.J. (81) 191)

Interdigitation

DSC; Fluorescence; Phospholipid; Cholesterol; Subgel (Rosser, M.F.N. (81) 33)

Interfacial tension

Liquid/liquid interfaces; Protein adsorption (Beverung, C.J. (81) 59)

Ising model

Binding; Two-dimensional lattice model; Cooperativity; Scatchard plot; Protein–nucleic acid interactions (Kong, Y. (81) 7)

Lipid bilayer

Hydrophobic thickness; Capacitance; Microvolt technique; Maximal thinning; Spontaneous emulsification; Modified cholesterol (Knudsen, P.J. (81) 143)

Liposomes

Protein–lipid complexes; Fluorescence energy transfer; Hemoglobin (Gorbenko, G.P. (81) 93)

Liquid/liquid interfaces

Protein adsorption; Interfacial tension (Beverung, C.J. (81) 59)

Mag-Indo-1

BSA; Fluorescence; Probe; Calcium; Data analysis (Ribou, A.-C. (81) 179)

Maximal thinning

Spontaneous emulsification; Modified cholesterol; Lipid bilayer; Hydrophobic thickness; Capacitance; Microvolt technique (Knudsen, P.J. (81) 143)

Melting

DNA–mixed liposomes complexes; DNA compaction and condensation; Cryogenic transmission electron microscopy; Fluorescence microscopy; X-ray scattering; DNA–lipid complexes (Mel'nikova, Y.S. (81) 125)

Metaphase chromosome preparations

Extinction measurements; Thermal denaturation; DNA (Wolf, D. (81) 207)

Microvolt technique

Maximal thinning; Spontaneous emulsification; Modified cholesterol; Lipid bilayer; Hydrophobic thickness; Capacitance (Knudsen, P.J. (81) 143)

Model

Strand diameter; Fibrin gels; Darcy constant (Nestler, F.H.M. (81) 1)

Models of cooperativity

Cryofocusing; Reaction intermediates; Hemoglobin (Perrella, M. (81) 157)

Modified cholesterol

Lipid bilayer; Hydrophobic thickness; Capacitance; Microvolt

technique; Maximal thinning; Spontaneous emulsification (Knudsen, P.J. (81) 143)

Molecular dynamics simulation

Cu,Zn superoxide dismutase; Structure–function relationship; Transition temperature; Dynamical cross-correlation (Falconi, M. (81) 197)

Persistence length

Excluded volume effect; Small angle X-ray scattering; Poly(methacrylic acid) (PMA); Debye function; Wormlike chain (Muroga, Y. (81) 45)

Phase transition

Interdigitated gel structure; Interaction free energy; Formamide; 1,3-propanediol; Excimer method (Li, S.J. (81) 191)

Phospholipid

Cholesterol; Subgel; Interdigitation; DSC; Fluorescence (Rosser, M.F.N. (81) 33)

Poly(methacrylic acid) (PMA)

Debye function; Wormlike chain; Persistence length; Excluded volume effect; Small angle X-ray scattering (Muroga, Y. (81) 45)

Probe

Calcium; Data analysis; Mag-Indo-1; BSA; Fluorescence (Ribou, A.-C. (81) 179)

Protein adsorption

Interfacial tension; Liquid/liquid interfaces (Beverung, C.J. (81) 59)

Protein hydration

Hydration history effect; Clathrate formation; Substrate binding; Sorption cooperativity (Gorbatchuk, V.V. (81) 107)

Protein–lipid complexes

Fluorescence energy transfer; Hemoglobin; Liposomes (Gorbenko, G.P. (81) 93)

Protein–nucleic acid interactions

Ising model; Binding; Two-dimensional lattice model; Cooperativity; Scatchard plot (Kong, Y. (81) 7)

Reaction intermediates

Hemoglobin; Models of cooperativity; Cryofocusing (Perrella, M. (81) 157)

Scatchard plot

Protein–nucleic acid interactions; Ising model; Binding; Two-dimensional lattice model; Cooperativity (Kong, Y. (81) 7)

Small angle X-ray scattering

Poly(methacrylic acid) (PMA); Debye function; Wormlike chain; Persistence length; Excluded volume effect (Muroga, Y. (81) 45)

Sorption cooperativity

Protein hydration; Hydration history effect; Clathrate formation; Substrate binding (Gorbatchuk, V.V. (81) 107)

Spontaneous emulsification

Modified cholesterol; Lipid bilayer; Hydrophobic thickness; Capacitance; Microvolt technique; Maximal thinning (Knudsen, P.J. (81) 143)

Strand diameter

Fibrin gels; Darcy constant; Model (Nestler, F.H.M. (81) 1)

Structure–function relationship

Transition temperature; Dynamical cross-correlation; Molecular dynamics simulation; Cu,Zn superoxide dismutase (Falconi, M. (81) 197)

Subgel

Interdigitation; DSC; Fluorescence; Phospholipid; Cholesterol (Rosser, M.F.N. (81) 33)

Substrate binding

Sorption cooperativity; Protein hydration; Hydration history effect; Clathrate formation (Gorbatchuk, V.V. (81) 107)

Thermal denaturation

DNA; Metaphase chromosome preparations; Extinction measurements (Wolf, D. (81) 207)

Thermophilic enzyme

Enzyme activity; Archaeon; β -glycosidase; Frequency domain fluorometry (D'Auria, S. (81) 23)

Transition temperature

Dynamical cross-correlation; Molecular dynamics simulation; Cu,Zn superoxide dismutase; Structure–function relationship (Falconi, M. (81) 197)

Two-dimensional lattice model

Cooperativity; Scatchard plot; Protein–nucleic acid interactions; Ising model; Binding (Kong, Y. (81) 7)

Wormlike chain

Persistence length; Excluded volume effect; Small angle X-ray scattering; Poly(methacrylic acid) (PMA); Debye function (Muroga, Y. (81) 45)

X-ray scattering

DNA–lipid complexes; Melting; DNA–mixed liposomes complexes; DNA compaction and condensation; Cryogenic transmission electron microscopy; Fluorescence microscopy (Mel'nikova, Y.S. (81) 125)
