

## Subject Index to Volume 114

### Acylation mechanism

$\beta$ -lactamase; Quantum mechanics; Proton transfer; Transition states; Reaction mechanism (Ke, Y.-Y. (114) 103)

### Antisense

Protein transduction domain; Inverted micelle; Cellular delivery (Thorén, P.E.G. (114) 169)

### Apparent reduction potentials

Nitrogenase; Mechanisms; Transformed Gibbs energy; Half reactions; Thermodynamics; Ferredoxin (Alberty, R.A. (114) 115)

### Ascorbic acid

EPR spectroscopy; RPM (radical pair mechanism); Fremy's salt; Ascorbyl; Gradient coils (Gualtieri, G. (114) 149)

### Ascorbyl

EPR spectroscopy; RPM (radical pair mechanism); Fremy's salt; Ascorbic acid; Gradient coils (Gualtieri, G. (114) 149)

### Atomization energies

Farformolide B; Sesamin; B3LYP; 6-31G\*; Ionization potentials; HOMO and LUMO energies; Energy gaps; Heat of formation; Vibration frequencies (Hsieh, T.-J. (114) 13)

### Bacterioferritin

Hydrogen peroxide; Human liver ferritin; Iron deposition; Recombinant ferritins; Kinetics (Bunker, J. (114) 235)

### Band III

FTIR spectroscopy; CO stretching band; Sol–gel encapsulation; Low temperature spectroscopy (Schirò, G. (114) 27)

### Bilayer free volume

Lysozyme–lipid interactions; Pyrene excimer formation (Ioffe, V. (114) 199)

### Biological networks

Cycle kinetics; Mathematical modeling; Metabolism; Systems biology (Qian, H. (114) 213)

### B3LYP

Farformolide B; Sesamin; 6-31G\*; Ionization potentials; HOMO and LUMO energies; Energy gaps; Heat of formation; Atomization energies; Vibration frequencies (Hsieh, T.-J. (114) 13)

### Born self-energy

Ion permeation; Membrane permeability; Dispersion self-energy (Boström, M. (114) 95)

### BRCA1

BRCT; Breast cancer (Pyrpassopoulos, S. (114) 1)

### BRCT

BRCA1; Breast cancer (Pyrpassopoulos, S. (114) 1)

### Breast cancer

BRCT; BRCA1 (Pyrpassopoulos, S. (114) 1)

### Calcification

Pancreatic stones; Pancreas; EPR; Thermal treatment; X-irradiation; Infrared spectra (Narasimhulu, K.V. (114) 137)

### Calcium binding

Ligand binding; Thermodynamic linkage; Unfolded state; Partition function (Hobson, K.F. (114) 43)

### Carotenoids

Resonance Raman spectroscopy; Photosystem I particles (Andreeva, A. (114) 129)

### Catalytic antibody

Linear plot; Kinetic parameters; Michaelis–Menten equation; Chloroperoxidase (Toti, P. (114) 245)

### Cellular delivery

Protein transduction domain; Inverted micelle; Antisense (Thorén, P.E.G. (114) 169)

### Chaotic oscillation

Liquid membrane oscillators; Molecular recognition; Gábor transformation; Taste sensing (Płocharska-Jankowska, E. (114) 85)

### CheY

Protein folding; Topology; Flavodoxin; Cutinase; Folding intermediate (Bollen, Y.J.M. (114) 181)

### Chloroperoxidase

Linear plot; Kinetic parameters; Michaelis–Menten equation; Catalytic antibody (Toti, P. (114) 245)

### CO stretching band

FTIR spectroscopy; Band III; Sol–gel encapsulation; Low temperature spectroscopy (Schirò, G. (114) 27)

### Cryosolvents

Sugar glass; Glycerol; Water; Tryptophan; Indole; IR; Fluorescence; Phosphorescence (Dashnau, J.L. (114) 71)

**Cutinase**

Protein folding; Topology; Flavodoxin; CheY; Folding intermediate (Bollen, Y.J.M. (114) 181)

**Cycle kinetics**

Biological networks; Mathematical modeling; Metabolism; Systems biology (Qian, H. (114) 213)

**Danthron**

Electrochemistry; DNA; UV-Vis spectroscopy; Intercalation (Zhou, H. (114) 21)

**Differential scanning calorimetry**

$\alpha$ -Lactalbumin; DL- $\alpha$ -dipalmitoylphosphatidylcholine; Nicotinamide (Kundu, A. (114) 157)

**DL- $\alpha$ -dipalmitoylphosphatidylcholine**

Differential scanning calorimetry;  $\alpha$ -Lactalbumin; Nicotinamide (Kundu, A. (114) 157)

**Dispersion self-energy**

Ion permeation; Membrane permeability; Born self-energy (Boström, M. (114) 95)

**Distribution of carrier masses**

Drug-carrier-systems; Porelectric spectroscopy; Evaluation algorithms (Sivaramakrishnan, R. (114) 221)

**DNA**

Danthron; Electrochemistry; UV-Vis spectroscopy; Intercalation (Zhou, H. (114) 21)

**DNA-protein complex**

p53; Electron microscopy; DNA-protein filaments; Oligomerization (Cherny, D.I. (114) 261)

**DNA-protein filaments**

p53; Electron microscopy; DNA-protein complex; Oligomerization (Cherny, D.I. (114) 261)

**DNA stainer**

Two-photon excitation microscopy; Fluorescence Imaging (Abbotto, A. (114) 35)

**Domain-domain interactions**

Interface area; Solvent accessibility; Neural network; Structure classification (Rai, M.F. (114) 63)

**Drug-carrier-systems**

Porelectric spectroscopy; Distribution of carrier masses; Evaluation algorithms (Sivaramakrishnan, R. (114) 221)

**Electrochemistry**

Danthron; DNA; UV-Vis spectroscopy; Intercalation (Zhou, H. (114) 21)

**Electron microscopy**

p53; DNA-protein complex; DNA-protein filaments; Oligomerization (Cherny, D.I. (114) 261)

**Electron spin resonance**

Human serum albumin; PEG-lipids; Sterically stabilized liposomes; Stearic acids spin labels; Fatty acids transfer (Pantusa, M. (114) 121)

**Energy gaps**

Farformolide B; Sesamin; B3LYP; 6-31G\*; Ionization potentials; HOMO and LUMO energies; Heat of formation; Atomization energies; Vibration frequencies (Hsieh, T.-J. (114) 13)

**EPR**

Pancreatic stones; Calcification; Pancreas; Thermal treatment; X-irradiation; Infrared spectra (Narasimhulu, K.V. (114) 137)

**EPR spectroscopy**

RPM (radical pair mechanism); Fremy's salt; Ascorbyl; Ascorbic acid; Gradient coils (Gualtieri, G. (114) 149)

**ESR**

Liposome; Viscosity; Propofol (Bahri, M.A. (114) 53)

**Evaluation algorithms**

Drug-carrier-systems; Porelectric spectroscopy; Distribution of carrier masses (Sivaramakrishnan, R. (114) 221)

**Extracellular hemoglobin**

Hemoglobin autoxidation; Oligomeric assembly (Poli, A.L. (114) 253)

**Farformolide B**

Sesamin; B3LYP; 6-31G\*; Ionization potentials; HOMO and LUMO energies; Energy gaps; Heat of formation; Atomization energies; Vibration frequencies (Hsieh, T.-J. (114) 13)

**Fatty acids transfer**

Human serum albumin; PEG-lipids; Sterically stabilized liposomes; Stearic acids spin labels; Electron spin resonance (Pantusa, M. (114) 121)

**Ferredoxin**

Nitrogenase; Apparent reduction potentials; Mechanisms; Transformed Gibbs energy; Half reactions; Thermodynamics (Alberty, R.A. (114) 115)

**Flavodoxin**

Protein folding; Topology; CheY; Cutinase; Folding intermediate (Bollen, Y.J.M. (114) 181)

**Flourescence**

Cryosolvents; Sugar glass; Glycerol; Water; Tryptophan; Indole; IR; Phosphorescence (Dashnau, J.L. (114) 71)

**Fluorescence Imaging**

Two-photon excitation microscopy; DNA stainer (Abbotto, A. (114) 35)

**Folding intermediate**

Protein folding; Topology; Flavodoxin; CheY; Cutinase (Bollen, Y.J.M. (114) 181)

**Free energy simulation**

Membrane proteins; Protein engineering; Solvation free energy; Molecular dynamics (Park, H. (114) 191)

**Fremy's salt**

EPR spectroscopy; RPM (radical pair mechanism); Ascorbyl; Ascorbic acid; Gradient coils (Gualtieri, G. (114) 149)

**FTIR**

HAS; Thermal stability; Thermal reversibility; Structural similarity (Wang, S.-L. (114) 205)

**FTIR spectroscopy**

Band III; CO stretching band; Sol-gel encapsulation; Low temperature spectroscopy (Schirò, G. (114) 27)

**6-31G\***

Farformolide B; Sesamin; B3LYP; Ionization potentials; HOMO and LUMO energies; Energy gaps; Heat of formation; Atomization energies; Vibration frequencies (Hsieh, T.-J. (114) 13)

**Gábor transformation**

Liquid membrane oscillators; Molecular recognition; Chaotic oscillation; Taste sensing (Płocharska-Jankowska, E. (114) 85)

**Glycerol**

Cryosolvents; Sugar glass; Water; Tryptophan; Indole; IR; Fluorescence; Phosphorescence (Dashnau, J.L. (114) 71)

**Gradient coils**

EPR spectroscopy; RPM (radical pair mechanism); Fremy's salt; Ascorbyl; Ascorbic acid (Gualtieri, G. (114) 149)

**Half reactions**

Nitrogenase; Apparent reduction potentials; Mechanisms; Transformed Gibbs energy; Thermodynamics; Ferredoxin (Alberty, R.A. (114) 115)

**HAS**

FTIR; Thermal stability; Thermal reversibility; Structural similarity (Wang, S.-L. (114) 205)

**Heat of formation**

Farformolide B; Sesamin; B3LYP; 6-31G\*; Ionization potentials; HOMO and LUMO energies; Energy gaps; Atomization energies; Vibration frequencies (Hsieh, T.-J. (114) 13)

**Hemoglobin autoxidation**

Extracellular hemoglobin; Oligomeric assembly (Poli, A.L. (114) 253)

**HOMO and LUMO energies**

Farformolide B; Sesamin; B3LYP; 6-31G\*; Ionization potentials; Energy gaps; Heat of formation; Atomization energies; Vibration frequencies (Hsieh, T.-J. (114) 13)

**Human liver ferritin**

Hydrogen peroxide; Bacterioferritin; Iron deposition; Recombinant ferritins; Kinetics (Bunker, J. (114) 235)

**Human serum albumin**

PEG-lipids; Sterically stabilized liposomes; Stearic acids spin labels; Electron spin resonance; Fatty acids transfer (Pantusa, M. (114) 121)

**Hydrogen peroxide**

Human liver ferritin; Bacterioferritin; Iron deposition; Recombinant ferritins; Kinetics (Bunker, J. (114) 235)

**Indole**

Cryosolvents; Sugar glass; Glycerol; Water; Tryptophan; IR; Fluorescence; Phosphorescence (Dashnau, J.L. (114) 71)

**Infrared spectra**

Pancreatic stones; Calcification; Pancreas; EPR; Thermal treatment; X-irradiation (Narasimhulu, K.V. (114) 137)

**Intercalation**

Danthron; Electrochemistry; DNA; UV-Vis spectroscopy (Zhou, H. (114) 21)

**Interface area**

Domain-domain interactions; Solvent accessibility; Neural network; Structure classification (Raih, M.F. (114) 63)

**Inverted micelle**

Protein transduction domain; Cellular delivery; Antisense (Thorén, P.E.G. (114) 169)

**Ion permeation**

Membrane permeability; Dispersion self-energy; Born self-energy (Boström, M. (114) 95)

**Ionization potentials**

Farformolide B; Sesamin; B3LYP; 6-31G\*; HOMO and LUMO energies; Energy gaps; Heat of formation; Atomization energies; Vibration frequencies (Hsieh, T.-J. (114) 13)

**IR**

Cryosolvents; Sugar glass; Glycerol; Water; Tryptophan; Indole; Fluorescence; Phosphorescence (Dashnau, J.L. (114) 71)

**Iron deposition**

Hydrogen peroxide; Human liver ferritin; Bacterioferritin; Recombinant ferritins; Kinetics (Bunker, J. (114) 235)

**Kinetic parameters**

Linear plot; Michaelis-Menten equation; Chloroperoxidase; Catalytic antibody (Toti, P. (114) 245)

**Kinetics**

Hydrogen peroxide; Human liver ferritin; Bacterioferritin; Iron deposition; Recombinant ferritins (Bunker, J. (114) 235)

 **$\alpha$ -Lactalbumin**

Differential scanning calorimetry; DL- $\alpha$ -dipalmitoylphosphatidylcholine; Nicotinamide (Kundu, A. (114) 157)

 **$\beta$ -lactamase**

Acylation mechanism; Quantum mechanics; Proton transfer; Transition states; Reaction mechanism (Ke, Y.-Y. (114) 103)

**Lambda phage**

Nonspecific binding; Statistical mechanics; Transcriptional activation (Bakk, A. (114) 229)

**Ligand binding**

Thermodynamic linkage; Calcium binding; Unfolded state; Partition function (Hobson, K.F. (114) 43)

**Linear plot**

Kinetic parameters; Michaelis–Menten equation; Chloroperoxidase; Catalytic antibody (Toti, P. (114) 245)

**Liposome**

ESR; Viscosity; Propofol (Bahri, M.A. (114) 53)

**Liquid membrane oscillators**

Molecular recognition; Gábor transformation; Chaotic oscillation; Taste sensing (Płocharska-Jankowska, E. (114) 85)

**Low temperature spectroscopy**

FTIR spectroscopy; Band III; CO stretching band; Sol–gel encapsulation (Schirò, G. (114) 27)

**Lysozyme–lipid interactions**

Pyrene excimer formation; Bilayer free volume (Ioffe, V. (114) 199)

**Mathematical modeling**

Biological networks; Cycle kinetics; Metabolism; Systems biology (Qian, H. (114) 213)

**Mechanisms**

Nitrogenase; Apparent reduction potentials; Transformed Gibbs energy; Half reactions; Thermodynamics; Ferredoxin (Alberty, R.A. (114) 115)

**Membrane permeability**

Ion permeation; Dispersion self-energy; Born self-energy (Boström, M. (114) 95)

**Membrane proteins**

Protein engineering; Solvation free energy; Molecular dynamics; Free energy simulation (Park, H. (114) 191)

**Metabolism**

Biological networks; Cycle kinetics; Mathematical modeling; Systems biology (Qian, H. (114) 213)

**Michaelis–Menten equation**

Linear plot; Kinetic parameters; Chloroperoxidase; Catalytic antibody (Toti, P. (114) 245)

**Molecular dynamics**

Membrane proteins; Protein engineering; Solvation free energy; Free energy simulation (Park, H. (114) 191)

**Molecular recognition**

Liquid membrane oscillators; Gábor transformation; Chaotic oscillation; Taste sensing (Płocharska-Jankowska, E. (114) 85)

**Neural network**

Domain–domain interactions; Interface area; Solvent accessibility; Structure classification (Rai, M.F. (114) 63)

**Nicotinamide**

Differential scanning calorimetry;  $\alpha$ -Lactalbumin; DL- $\alpha$ -dipalmitoylphosphatidylcholine (Kundu, A. (114) 157)

**Nitrogenase**

Apparent reduction potentials; Mechanisms; Transformed Gibbs energy; Half reactions; Thermodynamics; Ferredoxin (Alberty, R.A. (114) 115)

**Nonspecific binding**

Lambda phage; Statistical mechanics; Transcriptional activation (Bakk, A. (114) 229)

**Oligomeric assembly**

Extracellular hemoglobin; Hemoglobin autoxidation (Poli, A.L. (114) 253)

**Oligomerization**

p53; Electron microscopy; DNA–protein complex; DNA–protein filaments (Cherny, D.I. (114) 261)

**p53**

Electron microscopy; DNA–protein complex; DNA–protein filaments; Oligomerization (Cherny, D.I. (114) 261)

**Pancreas**

Pancreatic stones; Calcification; EPR; Thermal treatment; X-irradiation; Infrared spectra (Narasimhulu, K.V. (114) 137)

**Pancreatic stones**

Calcification; Pancreas; EPR; Thermal treatment; X-irradiation; Infrared spectra (Narasimhulu, K.V. (114) 137)

**Parelectric spectroscopy**

Drug-carrier-systems; Distribution of carrier masses; Evaluation algorithms (Sivaramakrishnan, R. (114) 221)

**Partition function**

Ligand binding; Thermodynamic linkage; Calcium binding; Unfolded state (Hobson, K.F. (114) 43)

**PEG-lipids**

Human serum albumin; Sterically stabilized liposomes; Stearic acids spin labels; Electron spin resonance; Fatty acids transfer (Pantusa, M. (114) 121)

**Phosphorescence**

Cryosolvents; Sugar glass; Glycerol; Water; Tryptophan; Indole; IR; Fluorescence (Dashnau, J.L. (114) 71)

**Photosystem I particles**

Resonance Raman spectroscopy; Carotenoids (Andreeva, A. (114) 129)

**Propofol**

ESR; Liposome; Viscosity (Bahri, M.A. (114) 53)

**Protein engineering**

Membrane proteins; Solvation free energy; Molecular dynamics; Free energy simulation (Park, H. (114) 191)

**Protein folding**

Topology; Flavodoxin; CheY; Cutinase; Folding intermediate (Bollen, Y.J.M. (114) 181)

**Protein transduction domain**

Inverted micelle; Cellular delivery; Antisense (Thorén, P.E.G. (114) 169)

**Proton transfer**

Acylation mechanism;  $\beta$ -lactamase; Quantum mechanics; Transition states; Reaction mechanism (Ke, Y.-Y. (114) 103)

**Pyrene excimer formation**

Lysozyme–lipid interactions; Bilayer free volume (Ioffe, V. (114) 199)

**Quantum mechanics**

Acylation mechanism;  $\beta$ -lactamase; Proton transfer; Transition states; Reaction mechanism (Ke, Y.-Y. (114) 103)

**Reaction mechanism**

Acylation mechanism;  $\beta$ -lactamase; Quantum mechanics; Proton transfer; Transition states (Ke, Y.-Y. (114) 103)

**Recombinant ferritins**

Hydrogen peroxide; Human liver ferritin; Bacterioferritin; Iron deposition; Kinetics (Bunker, J. (114) 235)

**Resonance Raman spectroscopy**

Carotenoids; Photosystem I particles (Andreeva, A. (114) 129)

**RPM (radical pair mechanism)**

EPR spectroscopy; Fremy's salt; Ascorbyl; Ascorbic acid; Gradient coils (Gualtieri, G. (114) 149)

**Sesamin**

Farformolide B; B3LYP; 6-31G\*; Ionization potentials; HOMO and LUMO energies; Energy gaps; Heat of formation; Atomization energies; Vibration frequencies (Hsieh, T.-J. (114) 13)

**Sol–gel encapsulation**

FTIR spectroscopy; Band III; CO stretching band; Low temperature spectroscopy (Schirò, G. (114) 27)

**Solvation free energy**

Membrane proteins; Protein engineering; Molecular dynamics; Free energy simulation (Park, H. (114) 191)

**Solvent accessibility**

Domain–domain interactions; Interface area; Neural network; Structure classification (Raih, M.F. (114) 63)

**Statistical mechanics**

Lambda phage; Nonspecific binding; Transcriptional activation (Bakk, A. (114) 229)

**Stearic acids spin labels**

Human serum albumin; PEG-lipids; Sterically stabilized liposomes; Electron spin resonance; Fatty acids transfer (Pantusa, M. (114) 121)

**Sterically stabilized liposomes**

Human serum albumin; PEG-lipids; Stearic acids spin labels; Electron spin resonance; Fatty acids transfer (Pantusa, M. (114) 121)

**Structural similarity**

HAS; FTIR; Thermal stability; Thermal reversibility (Wang, S.-L. (114) 205)

**Structure classification**

Domain–domain interactions; Interface area; Solvent accessibility; Neural network (Raih, M.F. (114) 63)

**Sugar glass**

Cryosolvents; Glycerol; Water; Tryptophan; Indole; IR; Fluorescence; Phosphorescence (Dashnau, J.L. (114) 71)

**Systems biology**

Biological networks; Cycle kinetics; Mathematical modeling; Metabolism (Qian, H. (114) 213)

**Taste sensing**

Liquid membrane oscillators; Molecular recognition; Gábor transformation; Chaotic oscillation (Płocharska-Jankowska, E. (114) 85)

**Thermal reversibility**

HAS; FTIR; Thermal stability; Structural similarity (Wang, S.-L. (114) 205)

**Thermal stability**

HAS; FTIR; Thermal reversibility; Structural similarity (Wang, S.-L. (114) 205)

**Thermal treatment**

Pancreatic stones; Calcification; Pancreas; EPR; X-irradiation; Infra-red spectra (Narasimhulu, K.V. (114) 137)

**Thermodynamic linkage**

Ligand binding; Calcium binding; Unfolded state; Partition function (Hobson, K.F. (114) 43)

**Thermodynamics**

Nitrogenase; Apparent reduction potentials; Mechanisms; Transformed Gibbs energy; Half reactions; Ferredoxin (Alberty, R.A. (114) 115)

**Topology**

Protein folding; Flavodoxin; CheY; Cutinase; Folding intermediate (Bollen, Y.J.M. (114) 181)

**Transcriptional activation**

Lambda phage; Nonspecific binding; Statistical mechanics (Bakk, A. (114) 229)

**Transformed Gibbs energy**

Nitrogenase; Apparent reduction potentials; Mechanisms; Half reactions; Thermodynamics; Ferredoxin (Alberty, R.A. (114) 115)

**Transition states**

Acylation mechanism;  $\beta$ -lactamase; Quantum mechanics; Proton transfer; Reaction mechanism (Ke, Y.-Y. (114) 103)

**Tryptophan**

Cryosolvents; Sugar glass; Glycerol; Water; Indole; IR; Fluorescence; Phosphorescence (Dashnau, J.L. (114) 71)

**Two-photon excitation microscopy**

Fluorescence Imaging; DNA stainer (Abbotto, A. (114) 35)

**Unfolded state**

Ligand binding; Thermodynamic linkage; Calcium binding; Partition function (Hobson, K.F. (114) 43)

**UV-Vis spectroscopy**

Danthron; Electrochemistry; DNA; Intercalation (Zhou, H. (114) 21)

**Vibration frequencies**

Farformolide B; Sesamin; B3LYP; 6-31G\*; Ionization potentials; HOMO and LUMO energies; Energy gaps; Heat of formation; Atomization energies (Hsieh, T.-J. (114) 13)

**Viscosity**

ESR; Liposome; Propofol (Bahri, M.A. (114) 53)

**Water**

Cryosolvents; Sugar glass; Glycerol; Tryptophan; Indole; IR; Fluorescence; Phosphorescence (Dashnau, J.L. (114) 71)

**X-irradiation**

Pancreatic stones; Calcification; Pancreas; EPR; Thermal treatment; Infrared spectra (Narasimhulu, K.V. (114) 137)
