

## ERRATUM

*Br. J. Pharmac.* (1983), **78**, 339–351

'Distinctive pharmacological profile of a nonadrenergic inhibitory system in bullfrog lung' by Hall Downes & Stephen M. Taylor.

In Figure 3 (p. 344), the symbols have been transposed in the legend. This should read:

**Figure 3** Cumulative concentration-effect curves for DMPP-induced relaxation of bullfrog hemilungs in the presence (○) and in the absence (●) of hexamethonium ( $10^{-3}$  M) added 30 min before DMPP. Hexamethonium surmountably antagonized DMPP-induced relaxation of matched hemilungs. Propranolol ( $10^{-6}$  M) and atropine ( $10^{-5}$  M) were added during the initial equilibration period. Means of  $n=5$ ; vertical lines show s.e. DMPP: 1-1-dimethyl-4-phenylpiperazinium.
