

Corrigendum

In the paper 'Induction of apoptosis in human mitogen-activated peripheral blood T-lymphocytes by the ether phospholipid ET-18-OCH₃: Involvement of the Fas receptor/ligand system' by Christelle Cabaner *et al.* (*Br. J. Pharmacol.* (1999), **127**, 813–825) the legend to Figure 3 was incorrect. The authors wish to apologize for this error. The correct version is shown below.

Figure 3 TUNEL analysis of resting and mitogen-activated T-cells upon treatment with ET-18-OCH₃. Resting (A) and PHA/IL-2-activated (B and C) T-lymphocytes were treated for 9 h with 10 μ M (B) or 25 μ M (A,C) ET-18-OCH₃, and analysed by the TUNEL technique through confocal microscopy as described in the Methods section. No apoptotic cells were detected in untreated resting or PHA/IL-2-activated T-lymphocytes. Data shown are representative of four experiments performed. Bar, 10 μ m.
