Fulvalmixene. I. Synthesis and Reaction of Fulvalmixene-1, 4-quinone

By Yoshio Kitahara, Ichiro Murata and Takashi Asano

(Received February 9, 1961)

Fulvalmixene¹⁾ (I), one of the non-benzenoid aromatic compounds, is an interesting compound because of the possible contribution of ionic structures like Ia and for examination of its aromaticity. Its stability has been predicted to a certain extent from theoretical considerations²⁾.

The synthesis of I has so far not been attained; only the tetrabenzo derivative³⁾ is known. The syntheses of 2, 3-benzofulvalmixene-1, 4-quinone and its parent compound, fulvalmixene-1, 4-quinone are described herein.

Reaction of indane-1, 3-dione (II) and 2 mol. equivalents of tropylium bromide (III) in aqueous solution afforded 2, 2-ditropylindane-1, 3-dione (IV), m. p. 167.5~168°C in 95%

¹⁾ The authors wish to use fulvalmixene as the name for cycloheptatrienylidene cyclopentadiene although mixed fulvalene³ or sesquifulvalene* has been used. *W. von E. Doering, "Theoretical Organic Chemistry" (Kékule Symposium), Butterworth (1959), p. 35.

yeild (Found: C, 84.29; H, 5.41. Calcd. for $C_{23}H_{18}O_2$: C, 84.64; H, 5.56%. UV λ_{max}^{MeOH} m μ $(\log \varepsilon)$: 227 (4.69), 252 (4.31), IR $\nu_{c=0}$ 1728, 1699 cm⁻¹) Heating of IV at 175~180°C for 30 min. under reduced pressure4) left a red residue with liberation of cycloheptatriene. Recrystallization of this residue from benzene gave 2, 3-benzofulvalmixene-1, 4-quinone (V) as red needles, m. p. 244~245°C (Found: C, 81.71; H, 4.13. Calcd. for $C_{16}H_{10}O_2$: C, 82.04; H, UV $\lambda_{\max}^{\text{MeOH}} m\mu$ (log ε): 247 (4.43), 4.30%. 257 (4.40), 452 (4.57). IR $\nu_{e=0}$ 1645 cm $^{-1}$).

Reaction of cyclopentene-3, 5-dione⁵⁾ (VI) and 2 mol. equivalents of III in aqueous solution and adjustment of the reaction mixture to pH 6 \sim 7 with sodium hydrogen carbonate afforded in 93.5% yield, 4, 4-ditropylcyclopentene-3, 5-dione (VII) as yellow prisms, m. p. 121 \sim 122°C (Found: C, 82.45; H, 5.84. Calcd. for C₁₉H₁₆O₂: C, 82.58; H, 5.84%. IR $\nu_{c=0}$ 1735, 1696 cm⁻¹). Pyrolysis of VII did not give VIII.

Reaction of VI and 1 mol. equivalent of III in the presence of 1 mol. equivalent of hydrobromic acid and dehydrogenation of the resulting yellow oily product with chloranil in xylene gave fulvalmixene-1, 4-quinone (VIII) as red plates, m. p. $179 \sim 180^{\circ}$ C (Found: C, 78.41; H, 4.26. Calcd. for $C_{12}H_8O_2$: C, 78.25; H, 4.38%. UV λ_{\max}^{MOH} m μ (log ϵ): 222 (4.35), 253 (4.16), 420 (4.37). IR $\nu_{c=0}$ 1643 cm⁻¹).

The double bond at 2,3 position in VIII is active and undergoes addition to give the following adducts:

Dibromide (IX).—Yellow scales, m. p. 148°C (decomp.) (Found: C, 42.51; H, 2.42. Calcd. for $C_{12}H_8O_2Br_2$: C, 41.89; H, 2.34%. UV λ_{\max}^{MeOH} (log ε): 225 (4.30), 267 (4.21), 452 (4.43). IR $\nu_{c=0}$ 1627 cm⁻¹). V does not undergo the addition of bromine.

Cyclopentadiene Adduct (X).—Red prisms, m. p. $188 \sim 189^{\circ}$ C (Found: C, 81.51; H, 5.25. Calcd. for $C_{17}H_{14}O_2$: C, 81.58; H, 5.64%. UV $\lambda_{\max}^{\text{MeOH}}$ m μ (log ε): 235 (3.82), 289 (3.83), 450 (4.43). IR $\nu_{\text{c}=0}$ 1620 cm⁻¹).

Diazomethane Adduct (XI).—Orange needles, m. p. above 280°C (Found: C, 68.67; H, 4.33; N, 12.08. Calcd. for $C_{13}H_{10}O_2N_2$: C, 69.01; H, 4.46; N, 12.38%. UV $\lambda_{\max}^{\text{MeOH}}$ m μ (log ϵ): 225 (4.33), 266 (4.23), 451 (4.42). IR $\nu_{c=0}$ 1618 cm⁻¹).

These 2, 3-adducts showed a red shift of ca.

30 m μ in the first absorption band in their ultraviolet spectra, compared to that of VIII, and the C=O stretching vibration in their infrared spectra also showed a shift of ca. 20 cm⁻¹ to lower frequencies⁵. These phenomena might be explained by assuming that conjugation within the O=C-C=C-O group hinders conjugation between the carbonyl group and the seven-membered ring.

Absence of hydroxyl band in the infrared spectra of adducts shows that they do not exist in the enol forms, 1, 4-dihydroxyfulval-mixenes.

The Chemical Research Institute of Non-Aqueous Solutions Tohoku University Sendai

⁶⁾ The C=O stretching vibration in the dibromide IX is in smaller wave number region than in X and XI because it is an α-bromoketone (cf. L. J. Bellamy, "The Infra-red Spectra of Complex Molecules", Methuen Co., Ltd., London (1958), p. 139.
