## CARBOHYDRATE BIOENGINEERING MEETING

---

23–26 April 1995, Elsinore, Denmark.

It is a pleasure for us to invite you to participate in the 1995 Carbohydrate Bioengineering Meeting, scheduled for 23–26 April 1995, at the LO-School in Elsinore, Denmark.

Over the last decade we have witnessed a virtual explosion in our knowledge about both the function and structure of carbohydrates as well as the proteins they are interacting with. We are convinced that it is both a timely and relevant activity to provide an international forum, where we can discuss the latest research results with a particular emphasis on industrial and medical implications. It is becoming increasingly clear that carbohydrates and derivatives thereof have important roles in all biological systems. Many processes involving molecular recognition are either facilitated or modulated by carbohydrates. Concurrent with the revolution in microbiological techniques, we have available a host of new promising or significantly improved existing techniques for obtaining 3D structural information with high relevance for developing a detailed molecular understanding of the often complex interaction between carbohydrates and the enzymes or proteins they interact with.

In the circular to be distributed in November 1994, there will be a call for papers for poster presentations. Poster deadline, tentative 1 February 1995.

Proceedings of the meeting will be published in the form of a book—authors will receive instruction for authors upon acceptance of their abstract. Final manuscripts have to be delivered to the organizers at the meeting.

Participants are limited to 200.
