

Erratum

F.N. Goycoolea *et al.* **Screening for synergistic interactions in dilute polysaccharide solutions**, *Carbohydrate Polymers*, **28** (4), pp. 351–358, 1995.

The publishers wish to bring to the notice of the readers an error in the original publication of the above paper.

On p. 354, in the first column, the end of the second paragraph should read:

The distinguishing feature of the present approach is that the polymer concentrations required to give $\eta_{sp} \approx 1$ correspond to a very low degree of space-occupancy ($\eta_{sp} \approx 10$ at the onset of entanglement; Morris *et al.*, 1981) so that exclusion effects should be vanishingly small.

The publisher wishes to apologise for any embarrassment or inconvenience caused.
