Many aspects of this work have been published in French in the paper

R. Ouhib et al., Synthesis of glycopolymers amylose-g-poly lactide by grafting «from» method, Phys. Chem. News 48 (2009) 89–95.

**Editor's comments**

In certain cases the publication of work in English that has appeared in another journal in another language can be justified.

If an author is considering submitting such a paper the guidelines which must be adhered to are:

*An author may publish a paper in a language other than English in a journal of local circulation and may then submit an English-language version to an Elsevier journal. Editors may decline to publish a paper of this kind. If it is the journal's policy to publish some papers of this kind, and it is appropriate to do so, the paper may be published provided that the proper procedure has been followed:*

- Full disclosure has been made to the editor of all previous publications of the paper in any language.
- A full and reasonably prominent note, usually in the form of a footnote on the title page that records the prior publication, accompanies the English-language version of the paper.
- All necessary consents have been obtained from the previous publisher of the paper in any other language and from any other person who might own rights in the paper.

The journal's policy on other aspects of possible self plagiarism have been discussed in a recent editorial. Thirty years of Carbohydrate Polymers – Meeting the challenge of safeguarding journal quality. Carbohydrate Polymers [87 (2012) 1–2].
