

## Announcement

# International Symposium on Polymer Analysis and Characterization

The Ninth International Symposium on Polymer Analysis and Characterization (ISPAC-9) will be held on July 1–3, 1996 at Keble College, University of Oxford, UK. This three-day Symposium will consist of invited lectures, poster sessions, discussions, and information exchange on the latest developments involving polymer characterization approaches, techniques, and applications. Topics will include polymer separations, spectroscopic methods, scattering techniques, rheology, microscopy, thermal methods of analysis, as well as other areas of polymer analysis and characterization.

Preceding the Symposium, there will be a course on *Techniques for Polymer Analysis and Characterization*. The course content will include modern size-exclusion chromatography, characterization of water-soluble polymers, thermal methods of analysis, and NMR of polymers.
