|                                                                                                                                                                                                                                                                                                                                                                                                                  |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 4- <i>O</i> -Methyl- $\beta$ -L-idopyranosyluronic acid linked to xylan from kraft pulp: isolation procedure and characterisation by NMR spectroscopy<br>A. Teleman, M. Siika-aho, H. Sorsa, J. Buchert, M. Perttula, T. Hausalo and M. Tenkanen (Espoo, Finland) . . . . .                                                                                                                                      | 1   |
| Synthesis of dibekacin analogs containing 3-oxa- and 3-aza-2,3,4-trideoxy-D-glycero-hexopyranose<br>R. Kuwahara and T. Tsuchiya (Kawasaki, Japan) . . . . .                                                                                                                                                                                                                                                      | 15  |
| $\alpha$ -Hydrogen elimination in some carbohydrate triflates<br>A. El Nemr, T. Tsuchiya and Y. Kobayashi (Kawasaki, Japan) . . . . .                                                                                                                                                                                                                                                                            | 31  |
| Structural study and serological characterisation of the O-specific polysaccharide of <i>Hafnia alvei</i> PCM 1185, another <i>Hafnia</i> O-antigen that contains 3,6-dideoxy-3-[( <i>R</i> )-3-hydroxybutyramido]-D-glucose<br>E. Katzenellenbogen, J. Kübler, A. Gamian, E. Romanowska (Wrocław, Poland), A.S. Shashkov, N.A. Kocharova, Y.A. Knirel and N.K. Kochetkov (Moscow, Russian Federation) . . . . . | 61  |
| Structure of a new <i>N</i> -acetylismuramic acid-containing O-specific polysaccharide of <i>Proteus penneri</i> strains 19 and 35<br>S.N. Senchenkova, A.S. Shashkov, Y.A. Knirel, N.K. Kochetkov (Moscow, Russian Federation), K. Zych and Z. Sidorczyk (Lodz, Poland) . . . . .                                                                                                                               | 71  |
| Formation of kinetically trapped gels in the maltodextrin–gelatin system<br>S. Alevisopoulos, S. Kasapis (Bedfordshire, UK) and R. Abeysekera (Yorkshire, UK) . . . . .                                                                                                                                                                                                                                          | 79  |
| The extracellular polysaccharide of <i>Pichia (Hansenula) holstii</i> NRRL Y-2448: The structure of the phosphomannan backbone<br>L.A.S. Parolis, J.Ø. Duus, H. Parolis, M. Meldal and K. Bock (Valby, Denmark) . . . . .                                                                                                                                                                                        | 101 |
| Composition and block structure of alginates from New Zealand brown seaweeds<br>R. Panikkar and D. J. Brasch (Dunedin, New Zealand) . . . . .                                                                                                                                                                                                                                                                    | 119 |
| <b>Notes</b>                                                                                                                                                                                                                                                                                                                                                                                                     |     |
| Determination of the sugar linkage position in glycosides using ammonia chemical ionization mass spectrometry at low gas pressure<br>G. Reznicek and M. Mathà (Vienna, Austria) . . . . .                                                                                                                                                                                                                        | 133 |
| A convenient synthesis of <i>endo</i> -H ethylidene acetals<br>D. Rentsch and R. Miethchen (Rostock, Germany) . . . . .                                                                                                                                                                                                                                                                                          | 139 |

|                                                                                                                                                                                                                                                                                           |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <i>Announcement</i> . . . . .                                                                                                                                                                                                                                                             | C1  |
| <i>Information for Authors</i> . . . . .                                                                                                                                                                                                                                                  | C3  |
| <i>Regular Papers</i>                                                                                                                                                                                                                                                                     |     |
| Structural characterisation of xyloglucan secreted by suspension-cultured cells of <i>Nicotiana glumbaginifolia</i><br>I.M. Sims, S.L.A. Munro, G. Currie (Parkville, Australia), D. Craik (St. Lucia, Australia) and A. Bacic (Parkville, Australia) . . . . .                           | 147 |
| Synthesis of eight glycosides of hexasaccharide fragments representing the terminus of the O-poly-saccharide of <i>Vibrio cholerae</i> O:1, serotype Inaba and Ogawa, bearing aglycons suitable for linking to proteins<br>Y. Ogawa, P.-s. Lei and P. Kováč (Bethesda, MD, USA) . . . . . | 173 |
| Calystegine B <sub>4</sub> , a novel trehalase inhibitor from <i>Scopolia japonica</i><br>N. Asano, A. Kato, H. Kizu, K. Matsui (Kanazawa, Japan), A.A. Watson and R.J. Nash (Aberystwyth, UK) . . . . .                                                                                  | 195 |
| c,T-Dependence of the self-diffusion in concentrated aqueous solutions of methyl $\alpha$ - and $\beta$ -D-glucopyranosides<br>A. Heinrich-Schramm (Regensburg, Germany), C. Buttersack (Braunschweig, Germany) and H.-D. Lüdemann (Regensburg, Germany) . . . . .                        | 205 |
| Structural studies of a neutral polysaccharide produced by <i>Alcaligenes latus</i><br>Y. Nohata (Mie, Japan), J.-i. Azuma (Kyoto, Japan) and R. Kurane (Ibaraki, Japan) . . . . .                                                                                                        | 213 |
| Structural study of a highly O-acetylated core of <i>Legionella pneumophila</i> serogroup 1 lipopolysaccharide<br>Y.A. Knirel (Borstel, Germany; Moscow, Russian Federation), H. Moll and U. Zähringer (Borstel, Germany) . . . . .                                                       | 223 |
| Calcium gelation of pectic polysaccharides isolated from unripe tomato fruit<br>A.J. MacDougall, P.W. Needs, N.M. Rigby and S.G. Ring (Norwich, UK) . . . . .                                                                                                                             | 235 |
| <i>Note</i>                                                                                                                                                                                                                                                                               |     |
| Synthesis of 3-deoxy-2,4-di-O-methyl-D-erythro-pentono-1,5-lactone and of its L enantiomer by stereoselective hydrogenation of $\alpha$ , $\beta$ -unsaturated aldono-1,5-lactones<br>F. Zamora and J.A. Galbis (Sevilla, Spain) . . . . .                                                | 251 |
| Structure of a surface polysaccharide from <i>Acinetobacter baumannii</i> O16<br>S.R. Haseley, H.J. Diggle and S.G. Wilkinson (Hull, UK) . . . . .                                                                                                                                        | 259 |
| <i>Author index</i> . . . . .                                                                                                                                                                                                                                                             | C5  |
| <i>Subject index</i> . . . . .                                                                                                                                                                                                                                                            | C7  |
| <i>Contents</i> . . . . .                                                                                                                                                                                                                                                                 | C11 |
