

Announcement

BIOTRANS '97

22–26 September 1997

La Grande Motte, France

The 3rd International Symposium on Biocatalysis and Biotransformations will be held on September 22–26, 1997 in La Grande Motte, close to Montpellier, France.

This symposium will cover all aspects of biotransformation technology and research, using free enzymes or whole-cell microorganisms, related to the synthesis of chemical entities.

The major topics to be addressed are:

- Regio- and enantio-selective biotransformations
New sources of enzymes and new reactions for biotransformations
Catalytic antibodies
Glycobiotechnologies
- Modulation of activity and specificity of enzymes and new reactions for biotransformations
- Structural aspects of enzyme and enzymic mechanisms involved in biotransformation reactions
- Biocatalysis in industrial strategies and technological aspects of biotransformations
- Microbial models of animal metabolism
- Biodegradation reactions applied to environmental protection

The meeting will include plenary and invited lectures, oral communications and posters.

For scientific information, please contact:
