FULL PAPERS

Anthracycline glycosides of 2,6-dideoxy-2-fluoro- α -L-talopyranose

Derek Horton* and Anakshi Khare

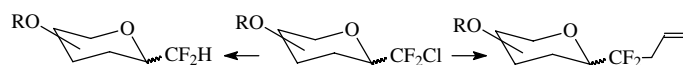

pp 2631–2640

Chlorodifluoromethyl-substituted monosaccharide derivatives—radical activation of the carbon–chlorine-bond

Anita Wegert, Martin Hein, Helmut Reinke, Norbert Hoffmann and Ralf Miethchen*

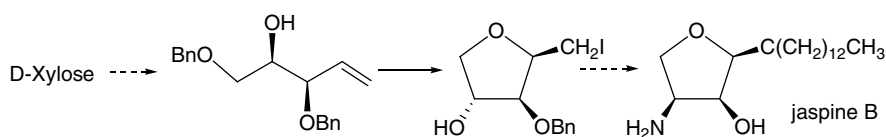

pp 2641–2652

Stereoselective synthesis of jaspine B from D-xylose

Jun Liu, Yuguo Du,* Xiaomin Dong, Shucong Meng, Junjun Xiao and Lijian Cheng

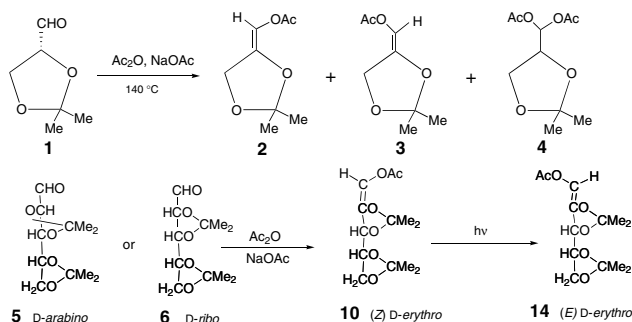

pp 2653–2657

Studies on enolization of *aldehydo*-aldose derivatives

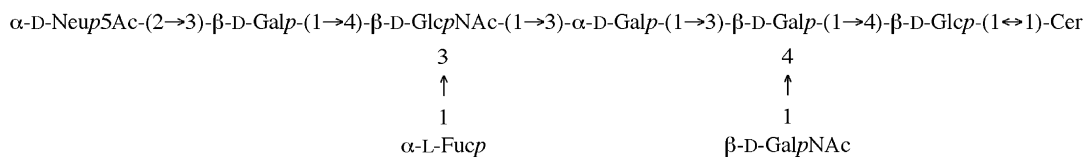

pp 2658–2668

Stephen J. Eitelman and Derek Horton*

Structural analysis of a unique hybrid-type ganglioside with *isoglobo*-, *neolacto*-, and *ganglio*-core from the gills of the Pacific salmon (*Oncorhynchus keta*)

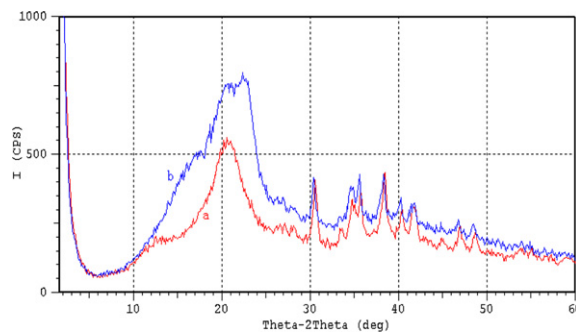

pp 2669–2676

Yukio Niimura

Physicochemical characterization of cellulose from perennial ryegrass leaves (*Lolium perenne*)

pp 2677–2687

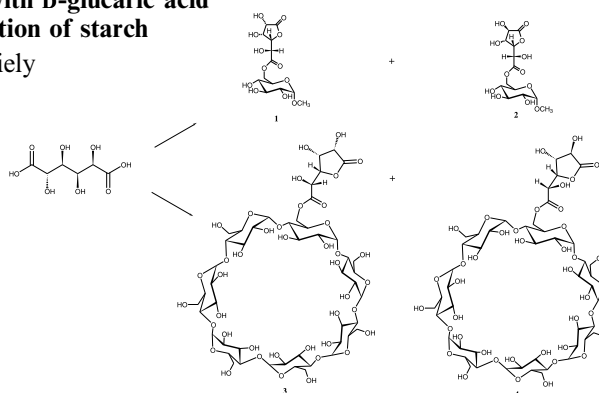

C. F. Liu, F. Xu, J. X. Sun, J. L. Ren, S. Curling, R. C. Sun,* P. Fowler and M. S. Baird

Esterification of select polyols with D-glucaric acid as model reactions for esterification of starch

pp 2688–2693

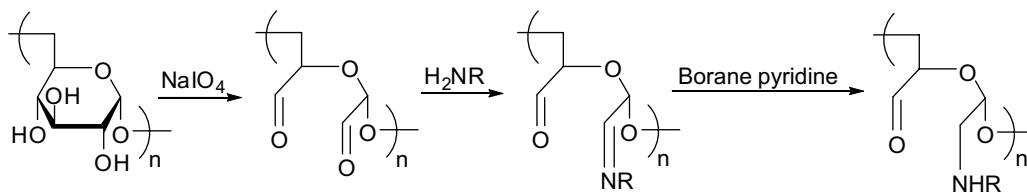

Cara-Lee Davey, Donald E. Kiely and Marilyn Manley-Harris*

Dextran and 5-aminosalicylic acid (5-ASA) conjugates: synthesis, characterisation and enzymic hydrolysis

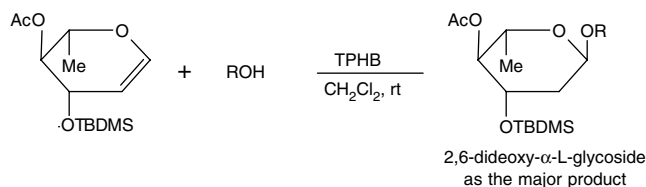

pp 2694–2701

Shavej Ahmad, Richard F. Tester,* Alistair Corbett and John Karkalas

**NOTES****4-*O*-Acetyl-3-*O*-*tert*-butyldimethylsilyl-L-rhamnal: a building block in the stereoselective synthesis of 2-deoxy- α -L-rhamnopyranosides**

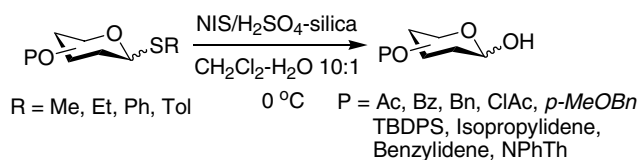

pp 2702–2707

Ilona Wandzik* and Tadeusz Bieg

**NIS/H₂SO₄-Silica: a mild and efficient reagent system for the hydrolysis of thioglycosides**

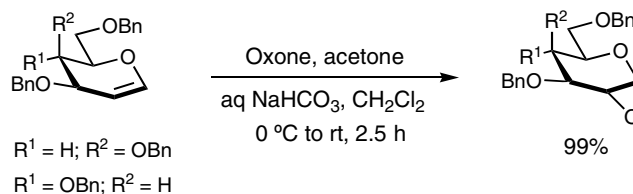

pp 2708–2713

Somnath Dasgupta, Bimalendu Roy and Balaram Mukhopadhyay*

**Direct epoxidation of D-glucal and D-galactal derivatives with in situ generated DMDO**

pp 2714–2716

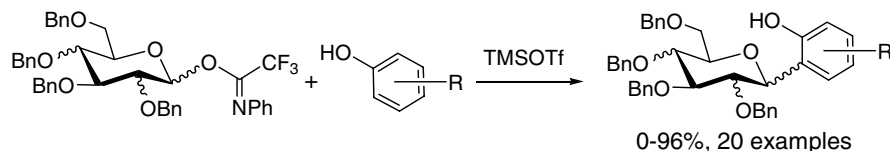

Pavel Cheshev, Alberto Marra and Alessandro Dondoni*

Aryl C-glycosylation of phenols with glycosyl trifluoroacetimidates

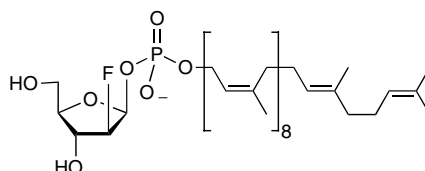

pp 2717–2722

Yuwen Li, Guo Wei and Biao Yu*

**Synthesis of 2-deoxy-2-fluoro analogs of polyprenyl β -D-arabinofuranosyl phosphates**

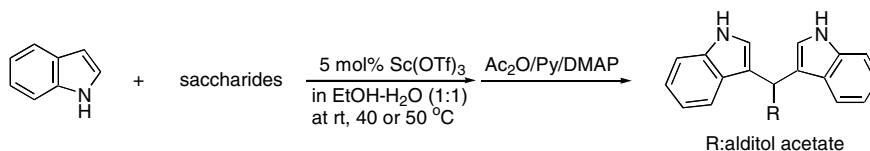

pp 2723–2730

Maju Joe and Todd L. Lowary*

**Direct C-glycosylation of indole with unprotected mono-, di-, and trisaccharides: a one-pot synthesis of 1-deoxy-1,1-bis(3-indolyl)alditols**

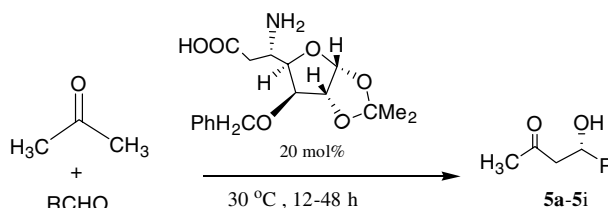

pp 2731–2736

Shingo Sato,* Hiroya Masukawa and Toshihiro Sato

**Asymmetric organocatalysis with glycosyl- β -amino acids: direct asymmetric aldol reaction of acetone with aldehydes**

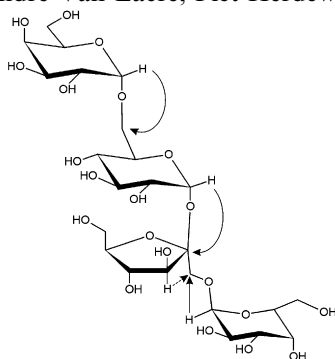

pp 2737–2743

Namrata Dwivedi, Surendra S. Bisht and Rama P. Tripathi*

Complete NMR characterization of lychnose from *Stellaria media* (L.) Vill**pp 2744–2750**

Mieke Vanhaecke, Wim Van den Ende,* André Van Laere, Piet Herdewijn and Eveline Lescrinier

**OTHER CONTENTS****Announcement****p 2751**

Image represents a key process of malaria parasites multiplying in, and rupturing from the human blood cell. The parasite surface is coated with glycosylphosphatidylinositols (GPIs), which have been identified as the malaria toxin by a collaborative effort between the research groups headed by Peter Seeberger (Swiss Federal Institute of Technology (ETH) Zürich, Switzerland) and Louis Schofield (Walter and Eliza Hall Institute of Medical Research, Australia). The space filling model represents the native GPI molecule from malaria parasite that has been chemically synthesized by the Seeberger group. Professor Peter Seeberger was presented with the Carbohydrate Research Award at the 13th European Carbohydrate Symposium (Bratislava, 2005).
