We regret that our paper did not cite the origin of the modified Gordon–Taylor equation, which appeared in our paper as shown below:

$$T_g = \frac{w_a^n T_a + k' w_b^n T_b}{w_a^n + k' w_b^n} \quad (2)$$

This equation was proposed by Professor Michio Tokuyama at the Institute of Fluid Science, Tohoku University in Japan. We regret the oversight and acknowledge Professor Tokuyama for his important contribution to our paper.
