CATALYSIS IN MULTIPHASE REACTORS

Guest Editor: P. Fouilloux (Décines, France); co-editors: C. de Bellefon, P. Grenouillet, C. Joly-Vuillemin (Décines, France)

Foreword	1
Kinetic Modelling	
Kinetics of the gas-slurry methanol–higher alcohol synthesis from CO/CO ₂ /H ₂ over a Cs–Cu/ZnO/Al ₂ O ₃ catalyst, including simultaneous formation of methyl esters and hydrocarbons B.B. Breman, A.A.C.M. Beenackers, H.A. Schuurman and E. Oesterholt (Groningen, Netherlands)	5
Liquid phase hydrogenation of phenylacetylene on pumice supported palladium catalysts D. Duca, L.F. Liotta and G. Deganello (Palermo, Italy)	15
Role of ethylene oxide solubility in the ethoxylation processes E. Santacesaria (Napoli, Italy), M. DiSerio (Salerno, Italy) and R. Tesser (Napoli, Italy)	23
Kinetics of glucose hydrogenation in a trickle-bed reactor N. Déchamp, A. Gamez, A. Perrard and P. Gallezot (Villeurbanne, France)	29
Non-equilibrium effects in the liquid-phase catalytic hydrogenation D.Yu. Murzin and N.V. Kul'kova (Moscow, Russia)	35
Palladium on alumina catalyst for glucose oxidation: reaction kinetics and catalyst deactivation I. Nikov and K. Paev (Sofia, Bulgaria)	41
Multiphase Catalytic Processes for the Environment	
Catalytic oxidation of aqueous solutions of organics. An effective method for removal of toxic pollutants from waste waters J. Levec and A. Pintar (Ljubljana, Slovenia)	51
Liquid phase catalytic oxidation of aliphatic alcohols mixtures I. Mazzarino (Torino, Italy), A. Santos (Madrid, Spain) and C. Renzi (Torino, Italy)	59
Mass transfer limitations of mercury-biotransformation in multiphase reactor S. Ledakowicz (Lodz, Poland), U. Becker and W.-D. Deckwer (Braunschweig, Germany)	65
Catalytic wet air oxidation of biosolids in a monolithic reactor F. Luck, M. Djafer and M.M. Bourbigot (Maisons Laffitte, France)	73
Catalytic removal of phenol from aqueous phase using oxygen or air as oxidant A. Fortuny, C. Ferrer, C. Bengoa, J. Font and A. Fabregat (Tarragona, Spain)	79
Coupling of Heat and Mass Transfer with Kinetics in Gas/Liquid/Solid Processes	
Modelling of a trickle bed reactor with strong exothermal reaction J. Hanika and J. Růžička (Prague, Czech Republic)	87
Partial hydrogenation of 1,5,9-cyclododecatriene in three phase catalytic reactors F. Stüber, M. Benaissa and H. Delmas (Toulouse, France)	95

Continuous hydrogenation of adiponitrile on Raney nickel in a slurry bubble column D. Gavroy, C. Joly-Vuillemin, G. Cordier, P. Fouilloux and H. Delmas (Décines Charpieu, France)	103
Steady state Fischer–Tropsch synthesis in fixed-bed and stirred tank slurry reactors D.B. Bukur, L. Nowicki and X. Lang (College Station, TX, USA)	111

Catalysis with Soluble Complexes

Catalysis with soluble complexes in gas–liquid–liquid systems R.V. Chaudhari, A. Bhattacharya and B.M. Bhanage (Pune, India)	123
Gas–liquid–liquid reaction engineering: hydroformylation of 1-octene using a water soluble rhodium complex catalyst P. Purwanto and H. Delmas (Toulouse, France)	135

Non-Conventional Technologies (Potential, Photocatalysis, Monoliths)

Catalyst potential: a key for controlling alcohol oxidation in multiphase reactors T. Mallat and A. Baiker (Zürich, Switzerland)	143
Liquid phase catalytic hydrogenation under potential control of the catalyst E. Lamy-Pitara, I. Belegri and J. Barbier (Poitiers, France)	151
Heterogeneous photocatalysis: an emerging discipline involving multiphase systems J.-M. Herrmann (Lyon, France)	157
Development of a continuous catalytic heterogeneous column reactor with simultaneous extraction of an intermediate product by an organic solvent circulating in countercurrent manner with the aqueous phase P. Rivalier, J. Duhamet (Bagnols-sur-Cèze, France), C. Moreau and R. Durand (Montpellier, France)	165
A comparison between the monolithic reactor and the trickle-bed reactor for liquid-phase hydrogenations R.K. Edvinsson (Göteborg, Sweden) and A. Cybulski (Delft, The Netherlands)	173
Catalyst deactivation in liquid- and gas-phase hydrogenation of acetylene using a monolithic catalyst reactor S. Asplund, C. Fornell, A. Holmgren and S. Irandoust (Göteborg, Sweden)	181
Autoxidation of methoxytoluene in acetic acid; electrochemical assistance of the catalytic effect of cobalt G. Falgayrac and A. Savall (Toulouse, France)	189
Liquid phase asymmetric hydrogenation on Pt-containing zeolite Y catalysts U. Böhmer, K. Morgenschweis and W. Reschetilowski (Frankfurt am Main, Germany)	195

Erratum to “Models for the regiochemistry and stereochemistry of microbial hydroxylation and sulfoxidation” [Catalysis Today, 22 (1994) 427–440] H.L. Holland (St. Catharines, Ontario, Canada)	201
Catalysis Today – Guide for Authors	203

PROCEEDINGS OF THE SECOND WORKSHOP ON C₁–C₃ HYDROCARBON CONVERSION, HELD IN KRASNOYARSK, RUSSIA, 27–30 JUNE 1994
Guest Editors: A.G. Anshits and E.N. Voskresenskaya (Krasnoyarsk, Russia)

Foreword	207
----------------	-----

Oxidative Coupling and Partial Oxidation of Methane

Catalytic partial oxidation of methane to synthesis gas K. Heitnes, S. Lindberg, O.A. Rokstad and A. Holmen (Trondheim, Norway)	211
The role of the defect structure of oxide catalysts for the oxidative coupling of methane. The activation of the oxidant A.G. Anshits, E.N. Voskresenskaya, E.V. Kondratenko and N.G. Maksimov (Krasnoyarsk, Russia)	217
Basic sites on the oxide surfaces: their effect on the catalytic methane coupling A.A. Davydov, M.L. Shepotko and A.A. Budneva (Novosibirsk, Russia)	225

On the nature of active sites of silica based oxide catalysts in the partial oxidation of methane to formaldehyde A. Parmaliana, F. Arena (S. Agata Messina, Italy), F. Frusteri, D. Miceli (S. Lucia Messina, Italy) and V. Sokolovskii (Johannesburg, South Africa)	231
Partial oxidation of methane to synthesis gas over (Ca,Sr) (Ti,Ni) oxides K. Takehira, T. Hayakawa, H. Harihara (Tsukuba, Ibaraki, Japan), A.G. Andersen (Blindern, Oslo, Norway), K. Suzuki and M. Shimizu (Tsukuba, Ibaraki, Japan)	237
Mechanisms of catalytic activation of methane and ethylene on magnesia surface elucidated by isotopic kinetics V.S. Muzykantov, A.A. Shestov (Novosibirsk, Russia) and H. Ehwald (Berlin, Germany)	243
Oxidative coupling of methane on the superionic conductors B. Ying-Li, L. Li-Tao and Z. Kai-Ji (Changchun, China)	245
New methods of increasing the catalytic activity and selectivity in the oxidative conversion processes of methane and propylene T.A. Garibyan, A.A. Muradyan, R.R. Grigoryan, L.A. Vartikyan, V.T. Minasyan and N.S. Manukyan (Yerevan, Armenia)	249
Selective oxidation of methane to methanol on a FeZSM-5 surface V.I. Sobolev, K.A. Dubkov, O.V. Panna and G.I. Panov (Novosibirsk, Russia)	251
Effect of supports on the carbon deposition of nickel catalysts for methane reforming with CO ₂ S.-B. Tang, F.-L. Qiu and S.-J. Lu (Chengdu, People's Republic of China)	253
Catalytic methane steam reforming: novel results I.I. Bobrova, N.N. Bobrov and A.A. Davydov (Novosibirsk, Russia)	257
Study on the oxidative coupling of methane: XRD and XPS study of TiO ₂ -based catalysts promoted by different additives M.-C. Gong, J.-L. Zhou, Z.-H. Xu, Y.-Q. Chen and Y. Chen (Chengdu, China)	259
Study on oxidative coupling of methane. Effect of additives on TiO ₂ -based catalytic performance M.-C. Gong, X.-H. Xu, Y.-Q. Chen, J.-L. Zhou and Y. Chen (Chengdu, China)	263
Morphology of carbon from methane on nickel-containing catalysts V.V. Chesnokov, V.I. Zaikovskii, R.A. Buyanov, V.V. Molchanov and L.M. Plyasova (Novosibirsk, Russia)	265
Synthesis of mechanically strong and thermally stable spherical alumina catalyst supports for the process of methane dimerization in a fluidized bed Z.R. Ismagilov, R.A. Shkrabina, N.A. Koryabkina (Novosibirsk, Russia) and F. Kapteijn (Delft, The Netherlands)	269
Oxidative coupling of methane over oxides of alkali earth metals using N ₂ O as oxidant E.V. Kondratenko, N.G. Maksimov, G.E. Selyutin and A.G. Anshits (Krasnoyarsk, Russia)	273
Comparison of O ₂ and N ₂ O as oxidants for the oxidative coupling of methane over Bi-containing oxide catalysts E.N. Voskresenskaya, L.I. Kurteeva, G.G. Pervyshina and A.G. Anshits (Krasnoyarsk, Russia)	277
Oxidative coupling of methane over sodium doped V–Mo–O–SiO ₂ honeycomb catalysts Z.R. Ismagilov (Novosibirsk, Russia), A. Parmaliana, F. Frusteri, D. Miceli (Messina, Italy), A.A. Kirchanov and G.B. Barannik (Novosibirsk, Russia)	281
Kinetic studies of oxidative coupling of methane on samarium oxide S.N. Vereshchagin and J.R.H. Ross (Twente, The Netherlands)	285
Conversion of natural gas to liquids and hydrogen in a thermal diffusion column TDC reactor A.N. Shigapov (Krasnoyarsk, Russia) and H.D. Gesser (Winnipeg, Canada)	289
Catalytic oxidative conversion of methane S.I. Galanov, L.N. Kurina, A.I. Galanov (Tomsk, Russia), A.A. Davydov (Novosibirsk, Russia) and V.N. Belousova (Tomsk, Russia)	293
Numerical modelling of the dynamics of methane oxidation V.I. Bykov, T.I. Vishnevskaya and N.M. Tsurulnichenko (Krasnoyarsk, Russia)	297
Oxidative coupling of methane over sodium-doped CaO catalysts prepared by the sol-gel method M. Yamamura, H. Okado, K. Chaki, T. Wakatsuki, K. Inaba, S. Suzuki (Chiba, Japan) and T. Yoshinari (Saitama, Japan)	299
Effect of hydrogen pumping on the rate of methane oxidation over a platinum electrode V.D. Belyaev, V.A. Sobyenin (Novosibirsk, Russia), V.P. Gorelov (Ekaterinburg, Russia) and V.V. Gal'Vita (Novosibirsk, Russia)	301

Selective Oxidation, Dehydrogenation, Oligomerization of C₂–C₃ Alkanes

The oxidative dehydrogenation of ethane and propane as an alternative way for the production of light olefins F. Cavani and F. Trifirò (Bologna, Italy)	307
Ethane oxidative dehydrogenation over boron oxides supported on yttria stabilized zirconia K. Otsuka, T. Ando, S. Suprpto, Y. Wang, K. Ebitani and I. Yamanaka (Tokyo, Japan)	315
Conversion of ethane to methanol and ethanol by ozone sensitized partial oxidation at near atmospheric pressure H.D. Gesser, G. Zhu and N.R. Hunter (Manitoba, Canada)	321
Propane oxidation over various metal molybdate catalysts Y.-S. Yoon, N. Fujikawa, W. Ueda, Y. Moro-oka (Yokohama, Japan) and K.-W. Lee (Taejeon, South Korea)	327
Active specie on vanadium-containing catalysts for the selective oxidation of ethane to acetic acid L. Tessier, E. Bordes (Compiègne, France) and M. Gubelmann-Bonneau (Aubervilliers, France)	335
In situ NMR identification of the intermediates and the reaction products in alcohols and hydrocarbons conversion on zeolites A.G. Stepanov (Novosibirsk, Russia)	341
Conversion of hydrocarbons over zeolites and phosphoric acid S.N. Vereshchagin, K.P. Dugaev, N.P. Kirik, N.N. Shishkina and A.G. Anshits (Krasnoyarsk, Russia)	349
Influence of bulk oxygen diffusion on the kinetics of partial oxidation over molybdenum-containing catalysts E.M. Al'kaeva, T.V. Andrushkevich, O.Yu. Ovsitser (Novosibirsk, Russia) and V.D. Sokolovskii (Johannesburg, South Africa)	357
Propane dehydrogenation over supported platinum catalysts: Effect of tin as a promoter O.A. Bariás, A. Holmen and E.A. Blekkan (Trondheim, Norway)	361
Oxidative dehydrogenation of ethane to ethylene over antimony-containing Keggin-type heteropolyoxomolybdates F. Cavani, M. Koutyrev and F. Trifirò (Bologna, Italy)	365

Overall Regularities in Oxidative Conversion of Low Alkanes

The regularities in the interaction of alkanes with CO ₂ on oxide catalysts O.V. Krylov (Moscow, Russia), A.Kh. Mamedov and S.R. Mirzabekova (Baku, Azerbaijan)	371
Catalyst properties and direction of selective oxidative transformations of C ₁ –C ₃ paraffins V.D. Sokolovskii (Johannesburg, South Africa)	377
Molecular models of active sites of C ₁ and C ₂ hydrocarbon activation G.M. Zhidomirov, V.I. Avdeev, N.U. Zhanpeisov, I.I. Zakharov and I.V. Yudanov (Novosibirsk, Russia)	383
Kinetic modeling of heterogeneous–homogeneous radical processes of the partial oxidation of low paraffins M.Yu. Sinev (Moscow, Russia)	389
The hydrocarbon processing industry in Siberia V.A. Kryukov (Novosibirsk, Russia)	395
Subject Index	403

CATALYTIC AND ADSORPTIVE DESULPHURIZATION OF GASES

J. Więckowska (Wrocław, Poland)	
Abstract	405
Section 1	405
1.1. Introduction	405
1.2. Sources of sulphur dioxide emissions	406
1.3. The toxicity of sulphur compounds emitted into the atmosphere	406
1.3.1. Toxicity of sulphur compounds to humans	409
1.4. Methods and techniques for the protection of atmospheric air	409
1.5. References	410
2. Restricted the emission of sulphur compounds	410
2.1. The occurrence of sulphur in some raw material	410
2.2. Methods for preventing emission of sulphur compounds	411

2.3. References	413
3. Processes of adsorption and catalysis	413
3.1. Adsorption	413
3.1.1. Activated adsorption	414
3.2. Catalysis	414
3.3. References	415
4. Adsorbents and catalysts	416
4.1. Adsorbents	417
4.1.1. Carbonaceous adsorbents	417
4.1.2. Inorganic adsorbents	418
4.1.3. Adsorbents and reagents for removing hydrogen sulphide from hot gases	419
4.1.4. Adsorbents (or reagents) containing transition elements	421
4.1.5. Adsorbents or reagents for removing SO ₂ from hot gases	422
4.1.6. Zeolite adsorbents	422
4.1.7. Mixed adsorbents	423
4.2. Catalysts for converting sulphur compounds from flue gases	423
4.3. References	424
5. Gas desulphurization processes	425
5.1. General	425
5.2. Purification of gases containing hydrogen sulphide	426
5.2.1. Oxidation of hydrogen sulphide to obtain sulphur	426
5.2.1.1. Desulphurization by iron compounds	426
5.2.1.2. Desulphurization by post-etched deposits	428
5.2.1.3. Desulphurization by post-aniline sludges	428
5.2.1.4. Desulphurization by other compounds (with 'Laut' or 'Lux' masses)	428
5.2.1.5. Sulferox process	429
5.2.1.6. Desulphurization with the use of catalysts	430
5.2.1.7. Desulphurization by activated carbons	430
5.2.1.8. Systems for gas desulphurization	431
5.2.1.8.1. Systems with periodic action under atmospheric pressure	431
5.2.1.8.2. Systems with continuous operation	432
5.2.1.8.3. High pressure systems for purification of hydrogen sulphide	432
5.2.2. Oxidation of hydrogen sulphide to obtain sulphur dioxide	433
5.3. Gas desulphurization by the Claus process	434
5.3.1. Mechanism of the reaction	434
5.3.2. An analysis of the basic parameters of the desulphurization of gases by means of Claus method	435
5.3.3. Catalysts used in the Claus process	438
5.3.4. Advantages and disadvantages of Claus method, and techniques for increasing efficiency of reaction	439
5.3.5. Claus process applied to gases with lower H ₂ S concentration	440
5.4. Superclaus process	442
5.5. Desulphurization of tail gases from Claus process	443
5.5.1. The BSR/Selectrox I process	443
5.5.2. The SCOT process	444
5.5.3. Sulfree process	445
5.5.4. The Modop process	445
5.5.5. The ELSE process	445
5.5.6. Other methods for reducing the emission of H ₂ S + SO ₂ gases	446
5.6. Desulphurization of gases poor in SO ₂	447
5.6.1. Dry LIFAC method for tail gas desulphurization	448
5.6.2. Alkaline system for desulphurizing tail gases	450
5.6.3. System for desulphurizing tail gases on the basis of the CDAS method	451
5.6.4. The NIRO-atomizer method	451
5.6.5. Desonox method	452
5.6.6. The Takeda process	453
5.6.7. The Sulfacid process	453
5.6.8. The Bergbau-Forschung/Uhde	453
5.6.9. The Westvaco process	454
5.6.10. Other solutions to dry desulphurization of gases containing SO ₂	454

5.7. Equipment used in gas desulphurization processes	458
5.7.1. Adsorbers with a stationary layer	458
5.7.2. Adsorbers with a movable layer	459
5.7.3. Fluidized bed adsorbers	460
5.7.4. Different solutions to systems for adsorbing SO ₂ or other sulphur compounds from gases	460
6. References	464
