

Preface

This issue of Catalysis Today contains the selected papers presented at the 2nd International Symposium on the Dynamics of Catalytic Systems. The symposium was organised within the framework of the 12th International CHISA Congress held in Prague, August 25–29, 1996.

The symposium was devoted to extensively studied area of chemical reaction engineering. At the symposium, scientists and researchers from four continents presented their contributions dealing with non-stationary methods in catalytic research, dynamics of transport phenomena in heterogeneous catalysis, operation of catalytic reactors under unsteady conditions and application of unsteady processes in industrial practice and environmental protection.

The event was well received by the participants and we are now looking forward to our 3rd

symposium which will be associated with the 13th CHISA Congress organised in Prague, August 23–28, 1998.

The editors thank all the contributors to this issue of Catalysis Today and referees for their careful selection of contributions. The editors are also deeply indebted to the Czech Society of Chemical Engineering for their organisational work and help during the Symposium.
