Swiss Academy of Medical Sciences Research Fellowships and Grants in Aid

The SAMS invites applications for research fellowships and grants in aid for the following fields of research:

Théodore Ott Fund

Basic neurological research

On the basis of the testamentary bequest of the physician Théodore Ott (1909–1911), Professor of Neurology at Lausanne, research fellowships and grants in aid are awarded to young researchers or research groups who submit plans for projects in the field of basic neurological research that are considered particularly worthy of support. In accordance with the wishes of the donor, preference is given to Swiss researchers or research groups who wish to carry out the greater part of their projects in universities in Switzerland. In the interest of international cooperation, stays abroad for part of the time are permitted.

A & D Fund

Alzheimer and depression research

Through a legacy, funds have been made available to the SAMS for the promotion of research projects in the field of Alzheimer's disease and depression.

Käthe Zingg Schwichtenberg Fund

Medical ethics and innovative projects

From this fund, the SAMS provides financing for the promotion of research projects or fellowships in the field of medical ethics and for initial grants in aid for the realization of new types of scientific projects for which there are, as yet, no other established research institutes available.

Applications for these research fellowships and grants in aid should be submitted in German, French or English. Application forms may be obtained from the Secretariat of the Swiss Academy of Medical Sciences, Petersplatz 13, CH-4051 Basel.

Last date for applications: 31 January 1999

6th International Congress on Amino Acids, University of Bonn, Germany, 3–7 August 1999
