## CORRIGENDUM

---

### Bilateral Detection Thresholds in Dextrals and Sinistrals Reflect the More Sensitive Side of the Nose, Which Is Not Lateralized

---

by **Simone A. Betchen and Richard L. Doty**

*Chemical Senses*, 23, 453–457, 1998

---

Regrettably, two errors in this paper should be corrected. First, in Figure 2 on p. 455, the error bars reflect  $0.5 \pm \text{SEM}$ , not  $1 \pm \text{SEM}$ . Second, the last sentence of the first paragraph of p. 456 should read: ‘. . . detection thresholds of rats with one olfactory bulb removed were equivalent to those of normal rats.’
