

# Chemical Society Reviews

Vol 1 No 3 1972

|                                                                                                 | Page |
|-------------------------------------------------------------------------------------------------|------|
| <b>Conformational Studies on Small Molecules</b><br>By E. B. Wilson                             | 293  |
| <b>CENTENARY LECTURE</b>                                                                        |      |
| <b>Three-dimensional Structures and Chemical<br/>Mechanisms of Enzymes</b><br>By W. N. Lipscomb | 319  |
| <b>The 16 and 18 Electron Rule in Organometallic<br/>Chemistry and Homogeneous Catalysis</b>    |      |
| By C. A. Tolman                                                                                 | 337  |
| <b>Electron Spectroscopy</b>                                                                    |      |
| By A. D. Baker, C. R. Brundle, and M. Thompson                                                  | 355  |
| <b>Chemicals in Rodent Control</b>                                                              |      |
| By N. J. A. Gutteridge                                                                          | 381  |
| <b>Interactions in the Atmosphere of Droplets<br/>and Gases</b>                                 |      |
| By M. D. Carabine                                                                               | 411  |
