NANO CHEMISTRY

A Chemical Approach to Nanomaterials

By Geoffrey A Ozin and André C Arsenault

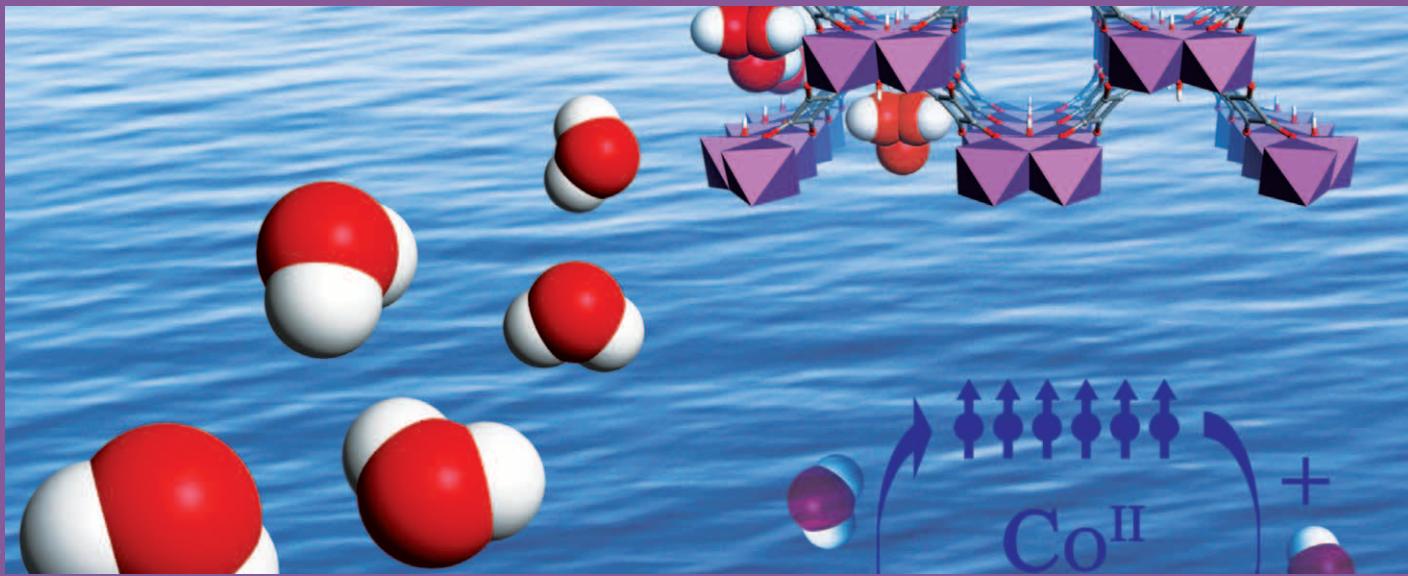

- Interdisciplinary and comprehensive
- Presents a basic chemical strategy for making nanomaterials
- Describes some of the principles of materials self-assembly over 'all' scales
- Demonstrates nanometre and micrometre scale building blocks
- Suggests new ways to tackle research problems
- Includes speculations on how to think about assembling the future of nanotechnology

Nanochemistry: A Chemical Approach to Nanomaterials is well illustrated with graphical representations of the structure and form of nanomaterials. It contains many pedagogical features and will appeal to graduate and advanced undergraduate students.

ChemComm

The leading international journal for the publication of communications on important new developments in the chemical sciences.

- Weekly publication
- Impact factor: 3.997
- Rapid publication – typically 60 days
- 3 page communications – providing authors with the flexibility to develop their results and discussion
- 40 years publishing excellent research
- High visibility – indexed in MEDLINE
- Host of the RSC's new journal, *Molecular BioSystems*
