

Chemistry & Biology Editors Announce Changes to the Editorial Team

Spring might not be yet in the air here in the Northeastern part of United States, where the Chemistry & Biology editorial offices are located, but change to the editorial team has arrived. We are excited to introduce the newest Editor of Chemistry & Biology, Dr. Hiroaki Suga, who joined the journal a few weeks ago. Dr. Suga is a professor at the University of Tokyo, School of Science, in Tokyo, Japan, and his key research interests transcend the limits of two disciplines, chemistry and biology, to create an amalgamation of projects and ideas rooted in both fields. His current research interests range from genetic code reprogramming and the development of new biological peptides to understanding and targeting bacterial quorum sensing. We are positive that his expertise and broad scientific interests will be a valuable asset to both the journal and the chemical biology community that we support.

At this time, we would also like to announce that Dr. Michael Famulok will be stepping down as an editor of the journal after serving in this role since 2001. During his tenure with the journal, Dr. Famulok has made outstanding contributions to the journal, advocating high editorial standards, publishing cutting-edge science, and engaging the community. Dr. Famulok will continue to work closely with the journal as a new editorial board member.

The editorial team remains committed to growing and improving our content, and we hope that you will see the journal as we do, as a collaboration between authors, reviewers, editors, and readers, or to paraphrase an African proverb, “it takes an energetic and creative scientific community to make a leading journal.”
