THE SUBSTRUCTURE OF STASIS-THEORY FROM HERMAGORAS TO HERMOGENES

I. INTRODUCTION

Stasis-theory seeks to classify rhetorical problems (declamation themes, or real forensic and deliberative situations) according to the underlying structure of the dispute that each involves. Such a classification is of interest to the practising rhetor, since it may help him identify an appropriate argumentative strategy; for example, patterns of argument appropriate to a question of fact (did the defendant do what is alleged?) may be irrelevant in an evaluative dispute (was the defendant justified in doing that?).

Ancient rhetoricians did not always agree on how to classify a given problem. Consider the case of the adulterous eunuch. A husband may kill an adulterer in the act; a man finds a eunuch in bed with his wife and kills him; he is charged with homicide. According to Hermogenes, the stasis is definition: the facts are agreed, and the dispute is about how to categorise those facts.² Whatever the eunuch was up to, it was clearly not a fully-fledged instance of adultery; it (and indeed he) lacked something arguably essential to that crime. Is this 'incomplete' adultery nevertheless to be classed as adultery? If so, then the killing is covered by the law on adultery; if not, the killing is unlawful. But the case could also be interpreted as counterplea (antilêpsis).3 Counterplea is a form of the stasis of quality, in which the defence maintains that the act for which it is charged is lawful in itself. For example: a rhetor's encomium on death is followed by a rash of suicides; he is charged with crimes against the public interest (dêmosia adikêmata), and defends himself by arguing that he broke no law in practising his profession.4 On this analysis of the adulterous eunuch, the husband's appeal to the law of adultery is seen as determining the stasis as counterplea without further ado.

Disagreement over the classification of a rhetorical problem raises the question of how *stasis* is in general to be ascertained. According to Hermogenes, one must inspect the *krinomenon*: if that is unclear, the *stasis* is conjecture (36.8–9); if it is clear but incomplete, the *stasis* is definition (37.1–2); if it is complete, the *stasis* is quality (37.14–15), which in turn has manifold subdivisions. However, Hermogenes does not tell us what the *krinomenon* is or how one identifies it. The *krinomenon* also figures in the alternative analysis of the adulterous eunuch, where it is linked to two other concepts, *aition* and *sunekhon*, which make no appearance in Hermogenes. We know

¹ For an overview of stasis-theory see D. Russell, Greek Declamation (Cambridge, 1983), 40–73; G. Kennedy, Greek Rhetoric under Christian Emperors (Princeton, 1983), 73–86; L. Calboli Montefusco, La dottrina degli status nella retorica greca e romana (Hildesheim, 1986); and my commentary on Hermogenes $\pi\epsilon\rho$ ι $\sigma\tau$ άσ $\epsilon\omega\nu$ (Oxford, forthcoming).

² See Hermogenes 60.19-61.3 Rabe. This case is found also in Sen. *Contr.* 1.2.23. A simpler variant in which the eunuch is prosecuted for adultery (*RG* 5.158.12-15, 7.217.21-4; Syrianus II 114.1 Rabe) is evidently definition.

³ See *RG* 5.158.8-159.6 Walz.

⁴ See RG 8.407.14-16; the same case with a philosopher is found in Fortunatianus, RLM 92.26-9 Halm.

that the triad aition-sunekhon-krinomenon goes back to Hermagoras (fr. 18 Matthes); but the significance of the terms in his system is uncertain,⁵ and (as we shall see) in subsequent sources they are used in strikingly inconsistent ways. This paper attempts to trace the history of these and related terms, and so to throw light on changing conceptions of the fundamentals of stasis-theory from Hermagoras on.

II. A SIMPLE MODEL

Our earliest sources offer a variety of schemes (I shall refer to them as 'Models') for the most basic analysis of a rhetorical problem. They agree that the analysis has a simpler structure when the question is conjectural (i.e. one of fact) than in other cases (Cic. Inv. 1.19, Part. 104; ad Her. 1.27) and offer a common account of that simple structure; their accounts of more complex analyses diverge. The complex analyses are not to be understood as elaborations of the simple analytical scheme applied to conjecture; each of these sources presents a Complex Model first, and appends the Simple Model as a departure from the norm dictated by a structural deficiency in conjectural problems. But for our present purposes it will be convenient to begin with the shared and more straightforward material; in this section, therefore, I summarize the Simple Model applied to cases of conjecture.

A conjectural dispute has three components: the prosecutor's claim ('You did this') and the defendant's counterclaim ('I did not') together pose a question for the jury to resolve ('Did he do it?'). To provide a concise, neutral system of reference to help anchor the shifting terminology of our sources, I shall use P, D and J to designate the roles of prosecutor, defence and jury; subscript numerals will distinguish successive phases of analysis in the Complex Models (for example, D_1 would be the defence's initial claim, D_2 its subsequent grounding). So the Simple Model can be represented schematically thus:

P₁ kataphasis You did it. D₁ apophasis I did not do it. J₁ krinomenon Did he do it?

- ⁵ See D. Matthes, 'Hermagoras von Temnos', Lustrum 3 (1958), 58–214, esp. 166–78 (with references to earlier literature). More recently: K. Barwick, 'Augustinus Schrift De Rhetorica und Hermagoras von Temnos', Philologus 105 (1961), 97–110; id., 'Zur Erklärung und Geschichte der Staseislehre des Hermagoras von Temnos', Philologus 108 (1964), 80–101; id. 'Probleme in den Rhet. LL Ciceros und der Rhetorik des sogenannten Auctor ad Herennium', Philologus 109 (1965), 57–74; J. Adamietz, M. F. Quintiliani Institutionis Oratoriae Liber III (Studia et Testimonia Antiqua 2, Munich, 1966), 206–21; L. Calboli Montefusco, 'La dottrina del KPINOMENON', Athenaeum 50 (1972), 276–93.
- ⁶ The parties to the dispute are called 'prosecutor' and 'defendant' for simplicity's sake; in some cases the first party might be a petitioner (e.g. a hero or tyrannicide) claiming an award which the second opposes.
- ⁷ Since my main concern is with the Greek tradition, I will generally translate the terminology of Latin sources into Greek without comment (here it is inferred from ad Her. 1.27: intentio = $\kappa \alpha \tau \dot{\alpha} \phi \alpha \sigma \iota s$, infitatio = $\dot{\alpha} \pi \dot{\alpha} \phi \alpha \sigma \iota s$, iudicatio = $\kappa \rho \iota \nu \dot{\alpha} \mu \epsilon \nu \nu \nu$). Most equivalences are clear (e.g. status or constitutio = $\sigma \tau \dot{\alpha} \sigma \iota s$, quaestio = $\zeta \dot{\eta} \tau \eta \mu \alpha$), but care is needed over the translations for two of our key terms, $\alpha \dot{\iota} \tau \iota \nu \nu$ and $\sigma \iota \nu \dot{\epsilon} \chi \nu \nu$. I accept Quintilian's statement (3.11.5, 9) that ratio = $\alpha \dot{\iota} \tau \iota \nu \nu$, continens or firmamentum = $\sigma \iota \nu \dot{\epsilon} \chi \nu \nu$. Sometimes ratio is glossed as quae continet causam (Cic. Inv. 1.18) or quae ... continet defensionem (ad Her. 1.26); might the use of continere suggest that ratio = $\sigma \iota \nu \dot{\epsilon} \chi \nu \nu \nu \dot{\epsilon} \nu \nu \dot{\epsilon} \nu \nu \dot{\epsilon} \nu \dot$

(It should be stressed that this and subsequent schemata illustrate the preliminary analysis of a problem. In particular, the notional dialogue is a device for clarifying the underlying structure of the dispute; it obviously does not correspond to the way a speech is organised or a trial conducted. The composition of a speech will not begin until after the preliminary analysis has been completed.)

III. THREE THEORIES OF STASIS

The Simple Model can be used to illustrate competing views about the location of *stasis* within the analysis. Three theories (I shall refer to them as 'Positions') can be identified:

Position A: stasis is the initial proposition of the defence (D₁).

According to Cicero this was Hermagoras' view: placet autem ipsi constitutionem intentionis esse depulsionem (Inv. 1.13). This is consistent with Hermagoras' well-attested definition of stasis as φάσις καθ' ην ἀντιλαμβανόμεθα τοῦ ὑποκειμένου πράγματος ἐν ῷ ἐστι τι ζήτημα καθ' ὅ ἐστιν ἡ ἀμφισβήτησις (fr. 10 Matthes).8 The defence's initial response ('I did not do it') is the proposition (φάσις) which counters (ἀντι-λαμβανόμεθα) the charge, and so constitutes the dispute as such. Cicero adopts this position himself in a late work: refutatio autem accusationis, in qua est depulsio criminis, quoniam Graece stasis dicitur, appelletur Latine status; in quo primum insistit quasi ad repugnandum congressa defensio (Top. 93). But in his earliest work he wavers between two other views:

Position B: stasis is the conflict of the initial propositions of prosecution and defence $(P_1 + D_1)$. Position C: stasis is the question which arises from the conflict of initial propositions (J_1) .

Cicero seems to adopt Position C at De Inventione 1.10: eam igitur quaestionem ex qua causa nascitur constitutionem appellamus (cf. 2.15: constitutio, id est quaestio). However, he immediately reverts to Position B; constitutio est prima conflictio causarum ex depulsione intentionis profecta. At 1.18 we read that the quaestio arises out of the conflictio causarum, in qua constitutio constat, which clearly identifies stasis with the initial conflict $(P_1 + D_1)$ and distinguishes it from the question which arises out of that conflict (J_1) . The Rhetorica ad Herennium follows Position B: constitutio est prima deprecatio defensoris cum accusationis insimulatione coniuncta (1.18).

Why should Hermagoras' original Position have been modified in these ways? If the antilogical implications of his definition are overlooked, Position A might be criticised as one-sided. In isolation the defence's initial proposition (D_1) would be meaningless; one must take account of the prosecution's contribution (P_1) as a codeterminant of the dispute. Positions B and C achieve that shift of emphasis.

⁸ Thus Prologemenon Sylloge (22) 329.10–12 Rabe (hereafter PS); with minor variants, (18) 318.10–12; RG 7.173.10–12 omits ϕ áσις and truncates after $\pi \rho$ άγματος, and this shorter version also underlies Quint. 3.6.21. I note in passing that this definition explains why Hermagoras excluded vομικὰ ζητήματα from the system of σ τάσεις: vομικὰ ζητήματα are π ερὶ ρ̂ητοῦ (cf. e.g. Hermogenes 37.17–20), and so do not grasp the \dot{v} ποκείμενον π ρᾶγμα.

⁹ The antilogical implications of Hermagoras' $\frac{\partial}{\partial \nu} \tau \iota \lambda \alpha \mu \beta \alpha \nu \delta \mu \epsilon \theta \alpha$ are noted by a later commentator on Hermagoras (RG 7.171.20–173.13), who infers (173.9–13) that Hermagoras agreed with his own adherence to Position B, as against adherents to Position C such as

IV. COMPLEX MODELS

If the defence denies the fact, D_1 will be 'I did not do it'; if the fact is conceded, D_1 will be (for example) 'I was justified in doing it'—the *stasis* of quality. The question which then arises ('Was he justified in doing it?') demands that the analysis be pressed further: on what grounds does the defence claim justification? So for *staseis* other than conjecture a more elaborate Model is needed. Although our sources are agreed on this point, they disagree about the shape of that Model. Cicero's rhetorical writings give three different accounts, each of which uses the terms *aition* and *sunekhon* in a different way. In this section I summarise the variants, and try to determine their historical relationship.

(a) Model 1

Cicero's earliest presentation (Inv. 1.18-19) can be summarized schematically thus:

The need to ground the defence's plea of justification gives rise to a second round of conflicting propositions. Aition is applied to D_2 , the explanation for the act charged which the defence offers in order to substantiate its plea of justification. Sunekhon also belongs to the defence; it is D_3 , the defence's strongest argument (firmissima argumentatio defensoris et appositissima ad iudicationem). Note that, by contrast with the Simple Model, there is a distinction between the zêtêma which arises from the initial propositions (J_1) and the ultimate point for adjudication, the krinomenon (J_2) .

This Model is coherent and intelligible. The analysis of a case has three stages. First one looks at the initial positions of the two parties (P_1, D_1) and the question to which they give rise (J_1) . This allows an identification of the *stasis* of the case, revealing the nature of the dispute in the most general terms (whether it is about fact, name, or quality). If the dispute is about fact, the analysis is complete; one's task is then to marshal evidence for or against the contested factual claim. If the dispute is not one of fact, it is necessary to proceed to the second stage. The defence's first proposition (D_1) must be supported by circumstantial grounds (D_2) ; this identifies the precise point on which the jury will have to adjudicate (J_2) . Thirdly, knowing the point on which the jury must adjudicate one can identify the defence's strongest line of argument (D_3) . Once this has been identified, both parties can begin to work out the points which they will deploy to weaken or confirm that crucial line of argument. D_3 is thus the *sunekhon* in the sense of the main or crucial point of the dispute. (D_3)

Minucianus (whose definition of stasis is attacked at 172.27–173.2). For this commentator stasis is not the zêtêma, but produces it: στάσεις γάρ εἰσιν αἱ ἀνωτάτω προτάσεις ... αὕται δὲ συνιοῦσαι ποιοῦσι ζήτημα, 172.2–4). He quotes Hermagoras' definition in the abbreviated form (see n. 8); <math>φάσις (if authentic) contradicts the plural προτάσεις, and rules out Position B.

10 See LSJ⁹ s.v. συνέχω 3. The usage is attested (e.g.) in Polybius' references to the *sunekhon* of a treaty (2.12.3), document (3.27.1), agreement (3.29.9) or deliberative assembly (24.4.2).

OCQ 44

(b) Model 2

Cicero's second presentation, in *Partitiones Oratoriae* 101–6, is significantly different:

 $\begin{array}{ll} P_1 & & \text{Opimius killed Gracchus.} \\ D_1 & & \text{The killing was legal.} \end{array}$

J₁ zêtêma Did Opimius kill Gracchus legally?

D₂ aition I acted lawfully in the interests of public security and the preservation of the

republic.

P₂ sunekhon You had no legal power to put a citizen to death without trial, no matter

how depraved.

J₂ krinomenon Did he have the legal power to put a citizen subverting the state to death

unconvicted?

As in Model 1, $z\hat{e}t\hat{e}ma$ (J_1) and krinomenon (J_2) are distinguished, and aition is D_2 , the defence's grounding of its plea of justification. But sunekhon has been transferred to the prosecution: it designates P_2 , the prosecutor's attempt to undermine the grounding of the defence's initial claim. The defence's third proposition plays no role in this analysis.

The example cited here (one of several in the *Partitiones*) reappears in *De Oratore* 2.132. The presentation is highly condensed, and technical terminology is suppressed. This makes it impossible to say with certainty that we are dealing here as in the *Partitiones* with Model 2; but the two texts may be close in date, ¹¹ and since they both omit D_3 (by contrast with Model 1) and place P_2 after D_2 (by contrast with Model 3), it seems likely that the same Model is assumed in both.

The anonymous *Rhetorica ad Herennium* also embodies a variant of Model 2 (1.26):

 $\begin{array}{ll} P_1 & \qquad & \text{Orestes killed his mother.} \\ D_1 & \qquad & \text{I killed her justly.} \\ D_2 & \textit{aition} & \qquad & \text{For she killed my father.} \end{array}$

P₂ sunekhon But she should not have been killed by you, or been punished without trial. Given that Orestes claims to have killed his mother to avenge his father, was

it right that Clytaemnestra was killed without trial and by her son?

This scheme is structurally identical to that in the *Partitiones*, except that no account is taken of an initial $z\hat{e}t\hat{e}ma$ (J_1); from the first propositions one proceeds immediately to determining the *aition*.

(c) Model 3

At the very end of his life, Cicero offered a further account (Topica~93-5). The presentation is very compressed, and no example is elaborated; but there is enough to show that we are dealing with a distinct Model. As in Model 1, sunekhon belongs to the defence (continentia~vocentur,~quasi~firmamenta~defensoris); but, by contrast with Model 1, sunekhon cannot now be the defence's third proposition. This is indicated by the gloss quibus~sublatis~defensio~nulla~sit. Removing the strongest argument of the defence (D_3) would not remove the defence itself; to abolish the defence one must remove the grounding of its plea of justification, i.e. D_2 . It seems,

¹¹ De Oratore is securely dated to 55 by ad Att. 4.13.2; on the date of Part. see B. B. Gilleland, CP 56 (1961), 29–32, who argues for 54–52.

¹² The *Topica* is dated to 44 by ad Fam. 7.19.

therefore, sunekhon has taken over the place (D₂) which in Model 1 is filled by aition.¹³ In outline:

 P_1 Orestes killed his mother. $\vec{D_1}$ I killed her justly. $\mathbf{D_2}$ For she killed my father. sunekhon

Did Orestes kill his mother justly, given that she killed his father?

What, then, has become of aition? There are no internal grounds for answering this, but one possibility is that aition has been taken over by the prosecution (P_a); this would correspond to the normal usage in later sources. If so, the full Model would resemble that found in pseudo-Augustine (RLM 143.25–145.33 Halm):14

The general is guilty of murder. kataphasis

Ď, apophasis The killing was lawful. J_1 P_2 D_2 zêtêma Was the killing lawful? He killed a soldier. aition

sunekhon I killed him because he swore he would desert.

krinomenon Was it lawful for the general to kill the soldier because he swore he would

desert?

Note the changed relationship between the second propositions. In Models 1 and 2 the defence substantiated its plea of justification, and then the prosecution tried to rebut it; now the prosecution's second proposition precedes that of the defence. The prosecutor substantiates his charge, and then the defendant substantiates his defence.

(d) Hermagoras and his critics

Can we assign any one of these Models to Hermagoras? Quintilian attributes to him the scheme summarised in 3.11.1-10, and this (as we shall see) is Model 1; moreover, he explicitly contrasts Cicero's adherence to Hermagoras' system in De Inventione with the variant schemes in the Partitiones and Topica (3.11.18-19). Quintilian cannot have concluded that De Inventione follows Hermagoras on internal evidence alone: Cicero sometimes departs explicitly from Hermagoras in De Inventione (1.8, 12–14), and Quintilian maintains that Cicero misunderstood some aspects of Hermagoras' doctrine of stasis (3.6.58-60). Quintilian therefore had an independent source for Hermagoras' doctrines. It does not follow that he was right to identify Model 1 as Hermagorean; but his testimony cannot be set aside lightly.

Against this must be weighed the evidence of pseudo-Augustine. This author remarks that Hermagoras sometimes used aition aitiou as an alternative for sunekhon; he explains that the aition (i.e. the initial charge) is the cause of the dispute, so that the sunekhon (i.e. the defence's explanation of the act charged) gives the cause of act which was the cause of the trial (144.30-145.6). If this explanation of Hermagoras' usage is correct, he must have applied sunekhon to D₂, which entails Model 3.15 The context bristles with references to Hermagoras, and there is good Hermagorean material in it; most scholars who have worked on this material have sided with pseudo-Augustine against Quintilian.16

¹³ Compare the gloss on continentia = $\sigma v \nu \epsilon \chi v = D_2$ here (quibus sublatis defensio nulla sit) with that on $ratio = a \tilde{t} \tau \iota o \nu = D_2$ at Inv. 1.18 (quae si sublata sit nihil in causa controversiae relinquatur).

¹⁴ Ps.-Augustine does not say that conjecture and the other staseis require different treatment, although none of his illustrations of this scheme is conjectural.

¹⁵ If ps.-Augustine's evidence is discounted, the statement that Hermagoras used aition aitiou as equivalent to sunekhon must be rejected, or else the usage must be reinterpreted in terms of Model 1 (e.g. aition gives the ground of the initial defence $= D_2$ and sunekhon = aition aition gives the ground of the ground = D_3).

¹⁶ E.g. Matthes (n. 5), 174-6; contrast Adamietz (n. 5), 206-7.

Quintilian's testimony is, however, to be preferred:

- (i) Pseudo-Augustine's preferred usage is to speak of zêtêma (quaestio) instead of stasis; he remarks that 'some' use the term stasis (144.11–18). We know from Quintilian of rhetoricians who used zêtêma in place of stasis (3.6.2), but there is no doubt that stasis is a Hermagorean usage. Furthermore, it is only possible to substitute zêtêma for stasis if one adopts Position C; but (as we have seen) Hermagoras probably adhered to Position A. There are therefore significant inconsistencies between pseudo-Augustine and what is known of Hermagoras' doctrines.
- (ii) In Model 1 three phases of the defence appear in the analysis, and only the defence's propositions are dignified with technical terms. This consistent emphasis on the defence sits well with the corresponding emphasis in Position A. It would make sense if Hermagoras adopted both.
- (iii) A variant of Model 3 dominated later theory, in the sense that *aition* was normally associated with the prosecution, *sunekhon* with the defence. If Hermagoras proposed Model 3, he established—in pioneering work—the dominant system for the rest of antiquity; subsequent criticism would have created nothing but dead-ends.
- (iv) It is unlikely that aition and sunekhon were selected as technical terms by two independent parallel processes; more probably, one of our Models established the terminology and the others represent modifications of it. It is easier to grasp the motivation for the change of Model 1 into Models 2 and 3 than for either of the alternatives. It suggested in (III) that Hermagoras' adherence to Position A might be criticised as failing to take adequate account of the prosecution's role. Criticism of a one-sided emphasis on the defence might well prompt, as well as a move from Position A to Position B or C, a restructuring of the whole Model. Models 2 and 3 can be understood as alternative ways of bringing the prosecution's role into greater prominence, and so achieving a more balanced distribution of emphasis between the two parties. Each, therefore, implements a well-motivated structural modification of Model 1.
- (v) I argued above that Model 1 is a coherent system; but despite its theoretical elegance, the Model shows signs of weakness in practice. It is striking, in particular, that in the second book of *De Inventione* Cicero makes no reference at all to the third proposition of the defence when analysing specimen cases; his practice follows Model 2 in everything except terminology. It is hard to see why, if Model 3 was original, any rhetorician would have added a component (D_3) for which no practical use was found; it is easy to see why, if Model 1 was original, modifications should have dropped that component and cannibalised the technical term.

It seems likely, then, that Model 1 was the Hermagorean original. One problem remains. The simplest revision of Model 1 is Model 2: the analysis is truncated, the unwanted third proposition of the defence is dropped, the spare term *sunekhon* is recycled. Can we account for the more extensive reconstruction undertaken in Model 3, where the order of the second propositions is reversed and the terms *aition* and *sunekhon* are exchanged? The subsequent dominance of Model 3 suggests that it was found more satisfying in some respect. The answer may be a sense that, even if the role of the prosecution has to be taken into account, it is the defence which makes the

¹⁷ Motivation is no problem, of course, if we are free to assume 'misunderstanding' (e.g. Matthes (n. 5), 176); but since *Inv.* and *ad Her.* attest lively debate over, and deliberate modification of, Hermagoras' views, we should look for intelligibly motivated changes before resorting to the hypothesis of misunderstanding.

decisive contribution to the structure of the dispute. ¹⁸ So it should be the second proposition of the defence which immediately precedes and finally determines the *krinomenon*; and it is this second proposition of the defence which should be the *sunekhon* in the sense noted earlier, the main or crucial point. ¹⁹

I conclude, therefore, by offering this (inevitably hypothetical) reconstruction of the early stages of the debate. Hermagoras proposed Model 1; and, consistently with its thorough-going focus on the defence, he adopted Position A, locating stasis in the first proposition of the defence (D_1). His system was faulted for failing to take adequate account of the role of the prosecution. This criticism prompted Positions B and C, relocating stasis to the conflict of first propositions ($P_1 + D_1$) or to the zêtêma arising out of that conflict (J_1) respectively. In addition, his Model for the basic analysis of a rhetorical problem was reconstructed. The simplest modification abandoned D_3 , which had proved of little use in practical analysis, and transferred the term sunekhon to P_2 . But this went against the intuition that the defence was the ultimate, even if not the sole, determiner of the structure of the dispute; so Model 3 emerged, changing the order and logical relation of the second propositions so that D_2 was the sunekhon (the key point) immediately preceding the krinomenon.

If this reconstruction is right, Cicero's successive changes of Model become intelligible: in moving from Model 1 to Model 2 to Model 3 he was not switching sources at random, but keeping up with the latest developments in theory.

V. COLLAPSED MODELS

We noted above that the analyses of specimen cases in the second book of *De Inventione* illustrate the practical uselessness of the third proposition of the defence in Model 1; another point that emerges from these analyses is that the identification of *stasis* may in practice be influenced by the second round of propositions (2.70, 73). But this is a paradox. All three Positions associate *stasis* with the first phase of the analysis; no two-phase model can consistently adopt one of the Positions and allow the second phase propositions to influence *stasis*. Indeed, where an explicit distinction is made between the treatment of conjectural and other cases, the restriction of *stasis* to the first phase of analysis is a logical necessity. The analyst must have identified the *stasis* of his problem before he considers the second propositions, since he will only proceed to a second phase of analysis (and so bring the second propositions into play) if he has already ascertained that the case is not conjectural. In theory, therefore, *stasis* must belong to the first phase of the analysis; but the treatment of specimen cases in *De Inventione* suggests that this was hard to sustain in practice.

- Thus Cic. Part. 102 adopts Position B (characterising stasis as quasi conflictio cum adversario) but recognises that it is the defence's response which determines the nature of the conflict, aliquo certo statu aut infitiando aut definiendo aut aequitate opponenda. In the second century, Minucianus (discussed below) followed Position C but likewise saw the defence as determinative (RG 5.8.22–3; 7.139.24–5). At a still later date (citing the fourth-century Tyrannus) compare PS (22) 329.22–4: ... $\dot{\eta}$ τοῦ φεύγοντος φων $\dot{\eta}$ $\dot{\eta}$ ποιοῦσα $\dot{\tau}$ $\dot{\eta}$ ν ἀμφισβήτησιν, καὶ ώς ἀν ὁ φεύγων ἀπολογήσεται, ἀναφαίνεται $\dot{\eta}$ στάσις. Even Quintilian, who argues that stasis is sometimes determined by the prosecution (3.6.13–19), accepts that determination by the defence is the norm
- ¹⁹ Compare too the glosses on D_2 quoted in n. 13 above with the definition in Stoic theory of causation of the class of cause termed sunektikon: αἴτιον οὖ παρόντος μένει τὸ ἀποτέλεσμα καὶ αἰρόμενον αἴρεται... αὐτάρκως δι' αὐτοῦ ποιητικόν ἐστι τοῦ ἀποτελέσματος (SVF II 121.25–8); cf. A. Long and D. Sedley, Hellenistic Philosophy (Cambridge, 1987), I 336, with 341–2.

Quintilian (3.11.15) records that there were some who thought the *stasis* of the $z\hat{e}t\hat{e}ma$ (J_1) may differ from the *stasis* of the *krinomenon* (J_2); applied to the case of the adulterous eunuch, this theory might yield the conclusion that the *stasis* of the $z\hat{e}t\hat{e}ma$ is counterplea, that of the *krinomenon* definition. But this approach to the problem conflicts with the assumption that any problem has a single stasis. In general, therefore, later rhetoricians were forced to collapse the two phases of analysis into one. In this section I examine a variety of approaches.

(a) Quintilian

The difficulty of keeping stasis bound to the first phase can be observed in Quintilian. In 3.6.13-19 he rejects Position A (which links stasis to the first proposition of the defence) on the grounds that in rare cases it is the prosecution which determines stasis. For example, if the defence alleges adultery in justification of a homicide, the prosecution may constitute the case as conjecture by denying that the victim was an adulterer in fact. (Quintilian could equally have cited the adulterous eunuch: the prosecution's denial that a eunuch could commit adultery constitutes the case as definition.) If stasis can be determined by the prosecution's rebuttal of D_2 (the defence's grounding of a plea of justification), it has clearly broken free of the first phase of analysis.

To see how Quintilian copes with this development, we must pick our way carefully through the obscurities of 3.11. One apparent inconsistency confronts us immediately. At the beginning of this chapter stasis has already been identified (his inventis...), and the analyst proceeds to consider the zêtêma and subsequent elements of Hermagoras' Model 1 (... intuendum deinceps... quid sit quaestio, ratio, iudicatio, continens). This is consistent with Position A (stasis = D_1), as in Hermagoras, or with Position B (stasis = $P_1 + D_1$). But Quintilian has rejected Position A in 3.6.13–19 and Position B in 3.6.4–6. At first sight, the latter passage commits Quintilian to Position C: stasis is not the first conflict, but what arises from the first conflict. However, what arises from the conflict in 3.6.5 is not the zêtêma as such, but its species (genus quaestionis); Position C has apparently been qualified in some degree. A desire to qualify Position C is also in evidence at 3.6.20–1, which questions whether stasis is what arises from the first conflict, or is in what arises; a preference for the latter option is implied by 3.11.2, where stasis arises from the zêtêma. But neither Position C nor its modification agrees with the precedence of stasis over zêtêma entailed by the opening sentence of 3.11.

The exposition that follows, like the opening sentence, adheres to Model 1, covering $z\hat{e}t\hat{e}ma$ (2–3), aition and krinomenon (4), 21 and sunekhon (9). At 3.11.10 Quintilian notes that there is no aition in conjecture, unlike the other staseis—a standard doctrine, as we have seen (Cic. Inv. 1.19, Part. 104; ad Her. 1.27). But in 3.11.10–17 he reports and rejects the distinction between $z\hat{e}t\hat{e}ma$ and krinomenon in other staseis, insisting that the two are always identical. The distinction between J_1 and J_2 is an essential part of the structure of Model 1; in asserting the identity of $z\hat{e}t\hat{e}ma$ and krinomenon, therefore, Quintilian abandons the Model he has been expounding to this point.

After a brief summary (18–19) of Cicero's different schemes in the *Partitiones* and *Topica* (i.e. Models 2 and 3), Quintilian arrives at his preferred scheme. In 3.11.19–20

²⁰ See Quint. 3.6.9, 11.8; this is not to deny that any subsidiary questions which may arise in a speech will each have *stasis* (3.6.6–12, 11.6–7, Cic. *Inv.* 1.19).

²¹ In 5-8 Quintilian digresses to review some variant usages and discuss the possibility of multiple *aitia* and/or *krinomena*.

he approves those who reduce their technical apparatus to stasis, sunekhon and krinomenon (verius igitur et brevius ii qui statum et continens et iudicationem esse voluerunt). ²² Sunekhon has now acquired a new sense: in 3.11.9 Quintilian defined it as D₃; here it refers to the combination of P₁ (et quod Orestes matrem...) and D₂ (... et quod Clytaemnestra Agamemnonem occiderit). Quintilian goes on to say (24) that sunekhon, zêtêma and krinomenon are all the same. The identity of zêtêma and krinomenon has already been asserted (15–17); sunekhon is included in the equation apparently in the sense that the conflict of claim and counterclaim is precisely the matter on which judgement must be passed. Stasis and krinomenon are not identical but 'agree' (consentire, 20); this formula, which restates the claim (8) that there is always a single ultimate krinomenon to which the stasis of the case is tied, agrees with the qualification of Position C noted earlier: stasis is not itself the product of the initial conflict, but is in or arises out of that product.

Quintilian's exposition in 3.11 is hardly a model of clarity, but its structure should now be discernible. He begins by setting out the original Hermagorean Model (1–10), noting that it entails a distinction between $z\hat{e}t\hat{e}ma$ and krinomenon (10–14); this distinction he regards as untenable (16–17); so he opts in the end for a radically simplified system (19–20, 23–4). In this system one first considers claim and counterclaim (sunekhon); this discloses the question on which the jury must pronounce ($z\hat{e}t\hat{e}ma = krinomenon$):

 P_{1+2} , D_{1+2} sunekhon Orestes killed his mother; but she had killed his father. J_{1+2} zêtêma = krinomenon Did Orestes kill his mother justly, given that she had killed his father?

Having pinned down the question, one can then identify the kind of question (stasis = genus quaestionis, cf. 3.6.5) at issue. The impracticability of restricting stasis to the first phase of the analysis has been solved, simply enough, by collapsing the two phases into one.

(b) Lollianus

Quintilian's source in 3.11.19–20 cannot be identified; but a variety of parallels to his Collapsed Model can be discerned in later Greek theory. I turn first to Lollianus, a Greek rhetor of the early second century. His views are partially preserved in an important but cryptic testimonium.²³

The context is Lollianus' contention that stasis is an accidental property of rhetorical discourse $(\sigma \nu \mu \beta \epsilon \beta \eta \kappa \delta s \tau \hat{\omega} \ \hat{\rho} \eta \tau o \rho \iota \kappa \hat{\omega} \ \lambda \delta \gamma \omega)$. He distinguishes $z \hat{e} t \hat{e} m a$ (which is like matter), sunekhon (like form) and stasis (like colour and shape). This analogy implies that stasis is inseparable $(\hat{a}\chi \omega \rho \iota \sigma \tau \nu)$ from sunekhon, but not identical with it. Lollianus illustrated his point, but the illustration is preserved in a very cryptic form. There is a reference to the killing of a hero as an adulterer; but immediately after that two cases are mentioned, one a counterplea and one a definition; the difference in stasis is determined by the different quality of the persons involved. The case of the hero is a standard example of counterplea. A husband kills

²² The supplement (idem) esse (printed in Butler's Loeb) leads to incurable contradictions; Adamietz and Winterbottom rightly reject it.

²³ PS (22) 330.14–331.3 (at $330.\overline{27}$ Rabe's supplement $\langle o\dot{v}\delta a\mu \hat{\omega}s \rangle$ destroys the sequence of the argument); see O. Schissel, 'Lollianus aus Ephesos', *Philologus* 82 (1926/7), 181–201, esp. 191–5; P. Richter, 'Byzantinischer Kommentar zu Hermogenes', *Byzantion* 3 (1927/8), 153–204, esp. 190–1. On Lollianus: S. Gloeckner, *Quaestiones Rhetoricae (Breslauer Philologische Abhandlungen* 8.2, 1901), 50–4; O. Schissel, *art. cit.* and *RE* XIII/ii (1927) 1373–5 s.v. Lollianos (15).

an adulterous hero and is charged either with homicide or (more aptly) with a crime against the public interest; his defence rests on the legal warrant for his act.²⁴ There can be little doubt that the definitional case is the adulterous eunuch (the two cases being paired also in RG 5.158.8–159.6). Substituting the eunuch for the hero is a change of person, and it is accompanied by a change of stasis from counterplea to definition. The sunekhon in each case is the same (the defendant argues that the killing was legal since the victim was an adulterer) but the stasis is different; so sunekhon and stasis are not identical, even though they are inseparable. It follows that stasis, since it can vary independently, is an accidental property.

Let us now consider Lollianus' use of terms more closely. First, $z\hat{e}t\hat{e}ma$. When Lollianus compares $z\hat{e}t\hat{e}ma$ to matter, this suggests that the $z\hat{e}t\hat{e}ma$ is the rhetorical problem itself, the facts of the case; in this sense Syrianus speaks of $\tau \hat{o} \pi \rho \hat{a} \gamma \mu a \pi \epsilon \rho \hat{i}$ où $\hat{i} \sigma \tau \hat{a} \sigma \iota s$, $\tau o v \tau \hat{e} \sigma \iota \iota \tau \hat{o} \zeta \hat{\eta} \tau \eta \mu a$, which is also called $\pi \rho \hat{o} \beta \lambda \eta \mu a$, $\delta \rho o s$, $\delta \pi \hat{o} \theta \epsilon \sigma \iota s$, $\mu \epsilon \lambda \hat{e} \tau \eta$, $\pi \lambda \hat{a} \sigma \mu a$ or $\gamma \hat{v} \mu \nu a \sigma \mu a$ (II 58.3–17; cf. e.g. Hermogenes 36.7: $\pi a \nu \tau \hat{o} s$ où $\tau \iota \nu o \sigma o \hat{v} \tau \rho o \tau \epsilon \theta \hat{e} \nu \tau o s \zeta \eta \tau \hat{\eta} \mu a \tau o s$...). The cases of the adulterous hero and eunuch are different $z\hat{e}t\hat{e}mata$ —different bodies of matter—since the facts of the case are different; but they receive the same form from their shared sunekhon; and yet the stasis differs in each. So $s\hat{e}t\hat{e}ma$ is not applied here to a preliminary question arising out of the conflict of first propositions, as in the original Complex Models. But if that preliminary question is dropped, it is at least possible that Lollianus has collapsed the two phases into one, as did Quintilian's source.

What of *sunekhon*? I have been assuming that this refers to the defence. Quintilian surmised (*mihi videntur*, 3.11.20) that in his source for the Collapsed Model the term subsumes both prosecution and defence, but Lollianus is unlikely to have followed suit. This would be self-evident if the charge in his version of the adulterous hero was crime against the public interest. The prosecution will then allege 'you harmed the public interest by killing him', but in the case of the eunuch 'you killed him'; these different allegations cannot be included in the *sunekhon*, which (in Lollianus' view) is the same in each case. But even if the charge in the case of the adulterous hero was homicide, the extension of *sunekhon* to include the prosecution is implausible. It is hard to see how the *stasis* could be differentiated if both prosecution and defence were identical in the two cases; there must be some reference to the difference of person ('you killed him *although he was a hero*', 'you killed him *although he was a eunuch*') if the analyst is to get a grip on the difference of *stasis*. *Sunekhon* must, therefore, refer to the defence alone in Lollianus. So if (as I suspect) Lollianus is working with a Collapsed Model, it is a collapsed version of Model 3.

The doctrine that stasis is an accidental is attacked in a scholion on Hermogenes (RG 7.248.13–32) which makes contrasting use of the matter/form analogy. The facts of the case are (as for Lollianus) the matter; a reference to $\pi o \lambda \iota \tau \iota \kappa \dot{\alpha} \pi \rho \dot{\alpha} \gamma \mu a \tau a$ $\dot{\eta} \tau o \iota \zeta \eta \tau \dot{\eta} \mu a \tau a$ shows zêtêma being used in the sense of the theme or problem, as in Lollianus. Paradoxically, however, these facts in themselves are $\dot{\alpha} \zeta \dot{\eta} \tau \eta \tau a$, that is, they lack zêtêma. What this means is that a rhetorical problem (zêtêma in one sense) needs a further ingredient if it is to involve a question or dispute (zêtêma in the other sense). This ingredient is stasis; for this commentator stasis is to the facts of the case as form is to matter. His thesis is, on the face of it, in conflict with that of Lollianus, for whom sunekhon was form. But the disagreement may not be about what gives form to a case, so much as about the definition of stasis. In Lollianus' system stasis varies

²⁴ Homicide: Syrianus II 129.19–22; RG 4.595.27–9. Dêmosia adikêmata: RG 4.587.23–4, 615.8–20; 7.487.29–488.31, 490.27–491.27 (and probably in 7.234.25–235.1).

²⁵ See Richter (n. 23), 190.

independently of *sunekhon*, so he does not follow Position A. The scholiast may do so; if, for him, *stasis* is (or is directly determined by) the *sunekhon*, his claim that *stasis* is form makes the same point as Lollianus' claim that *sunekhon* (and *not stasis*) is form —namely, that a dispute is constituted as such by the defence's response to the charge. This is standard doctrine, as we have seen (see nn. 18–19 above).

Lollianus' assertion that $z\hat{e}t\hat{e}ma$, sunekhon and stasis are distinct implies that other theorists equated all or some of them. As we have just seen, the equation of stasis and sunekhon can be understood as a modification of Position A; stasis is the first proposition of the defence; if the two phases of analysis are collapsed into one, then sunekhon, taken in an extended sense (= D_{1+2}), is the first proposition of the defence. The equation of stasis and $z\hat{e}t\hat{e}ma$ recalls Position C, except that if the two-phase structure is collapsed $z\hat{e}t\hat{e}ma$ will now be identical with krinomenon. It is possible that Lollianus is opposing these two distinct equations of stasis (with sunekhon and $z\hat{e}t\hat{e}ma$ respectively); a triple equation would be harder to interpret. Taking our cue from Quintilian 3.11.24, we might say that the defence's claim (e.g. 'I killed her justly because she killed my father') is what is ultimately subjected to adjudication; thus the krinomenon is the sunekhon. ²⁶ Taken with the equations of krinomenon and $z\hat{e}t\hat{e}ma$, $z\hat{e}t\hat{e}ma$ and stasis, the circle would be complete. However, it is not clear that krinomenon can be identified both with sunekhon and with $z\hat{e}t\hat{e}ma$ without equivocation; so this triple equation remains somewhat speculative.

It is perhaps worth noting that the variant of Position A evidenced in the equation of stasis and sunekhon may provide a clue to the rival interpretation of the adulterous eunuch as counterplea. This view depends on the analysis being truncated before arguments about whether a eunuch can be an adulterer enter into consideration. A theory which equates stasis with the initial proposition of the defence achieves this, even if the initial propositions are taken in an extended sense, so as to include the defence's claim that the killing was legal because the victim was an adulterer. It is the inheritors of Position C who will carry the analysis on until they reach the real point of conflict between the two parties, and so bring to light the definitional aspect of the case.

(c) Minucianus

I turn next to Minucianus, one of the most important rhetoricians of the second century, whose work on *stasis* for a long time was more influential than that of Hermogenes. Thin Minucianus defined *stasis* as the $z\hat{e}t\hat{e}ma$ constituted by the two initial propositions ($\tau \delta \epsilon \kappa \tau \hat{\omega} \nu \pi \rho \hat{\omega} \tau \omega \nu \pi \rho \sigma \tau \delta \sigma \epsilon \omega \nu \sigma \nu \nu \sigma \tau \delta \mu \epsilon \nu \nu \nabla \gamma \tau \eta \mu \alpha$); this is unequivocally Position C. We know from the scholia to Hermogenes that he used the triad *aition-sunekhon-krinomenon*, and that he applied *aition* and *sunekhon* to the first propositions of prosecution and defence respectively. We must now consider whether

This is presumably the explanation of Aquila's interchange of the terms sunekhon and krinomenon (Syrianus II 50.23–51.2): the defence's claim (e.g. 'I killed justly since he was an adulterer') is the point to be submitted to the jury's adjudication, and the question arising ('was the killing, given such-and-such circumstances, a legal killing of an adulterer?') is the crux of the case. Matthes (n. 5), 171 and 170 n. 3, infers textual corruption in the Aquila testimonium; but Syrianus' description of Aquila's proposal as a 'change' $(\partial \nu a \lambda \lambda d \xi as)$ would hardly be warranted by the minor alteration to the definition of aition $(=\tau \dot{\alpha} \ \dot{\alpha} \pi' \ \dot{\alpha} \rho \chi \dot{\eta} s \ \dot{\alpha} \chi \rho \iota \ \tau \dot{\epsilon} \lambda o \nu s$, i.e. the events on which the charge is based, e.g. a man's standing beside the newly-slain corpse as the basis for a homicide charge) alone. For Aquila see J. Brzoska, RE II (1896) 314 s.v. Aquila (6).

²⁷ Minucianus: Gloeckner (n. 23), 22-50. W. Stegemann, *RE* XV/ii (1932) 1975-86 s.v. Minukianos (1) is not consistently reliable on points of rhetorical theory.

²⁸ See PS (13) 206.2–5, (21) 318.13–15, (22) 328.13–14; RG 7.170 n. 58, 7.172.27–8.

these first propositions were the first phase of a Complex Model, or the sole phase of a Collapsed Model (in which case the identity of *stasis* and *zêtêma* will entail the identity of *stasis* and *krinomenon* as well).

The external evidence is conflicting. When the Hermogenes scholia want to explain Minucianus' usage of aition and sunekhon, they tend to use examples at the level of P_1 and D_1 (e.g. 'You killed' and 'I did not kill');²⁹ this could, however, be a mere shorthand. More telling is a summary of Minucianus' definition (PS (22) 328.13–21) which explicitly distinguishes these first propositions from the subsequent propositions used to support them (ai $\lambda o \iota \pi ai \pi po \tau \acute{a} \sigma \epsilon \iota s$, i.e. P_2 and D_2).³⁰ Against this we must set Syrianus, whose summary equally clearly identifies aition and sunekhon as the extended versions of the first propositions (II 50.13–23), giving a scheme like this (the case is of a rich man who constantly shakes his fists at his poor enemy, and is charged with hubris; the stasis is definition: does aggressive behaviour which falls short of an actual blow count as assault?):

 P_{1+2} aition You commit hubris by shaking your fists at me, as if I were a slave. D_{1+2} sunekhon I did not commit hubris, since I struck no blow.

 J_{1+2}^{1+2} krinomenon Did he commit hubris?

Furthermore, there is the evidence that Minucianus accepted the analysis of the adulterous eunuch as definition.³¹ The definitional aspect of this case is not revealed by propositions at the level of P_1 ('You killed him') and D_1 ('I killed him justifiably...'); it emerges only when D_2 ('... because he was an adulterer') evokes a response from the prosecution ('But a eunuch cannot commit adultery'). If *stasis* of this case is identified as definition by the initial propositions, therefore, they must be the extended initial propositions of a Collapsed Model.

The inference that for Minucianus aition and sunekhon had an extended sense is supported by considerations internal to his system. Minucianus had a distinctive approach to asustata (cases that are invalid because they lack stasis), which he diagnosed by means of deficiencies in their aition and sunekhon.³² To do this job, aition and sunekhon must include P₂ and D₂, since opposed claims at the level 'You killed him' and 'I did not kill him' leave open the possibility that the theme is asustaton (for example, the accusation might be groundless).³³ We have, then, in Minucianus another example of a Collapsed Model.

- 29 PS (13) 209.19–20; RG 7.139.22–5; compare Sopater's equation of aition and sunekhon with kataphasis and apophasis (RG 5.77.27–78.3, with 4.202.7–19).
- ³⁰ This pasage incidentally shows that the distinction between conjecture and other *staseis* has been forgotten; the illustration given is a standard example of conjecture (the man found beside a newly slain corpse and charged with homicide).
- 31 See Gloeckner (n. 23), 49, quoting the unedited scholia of Nilus: ἐπεὶ δὲ πολλοὶ τὸ παρὰ τῷ τεχνικῷ παράδειγμα ἐκβαλεῖν ἐπιχειροῦσι τοῦ ὅρου, ἀντιπίπτοντες οὐ μόνον τῷ τεχνικῷ, ἀλλ' ἔτι καὶ Μινουκιανῷ ...
- ³² RG 7.139.19-40.4; cf. Syrianus II 50.13-15; PS (13) 209.17-18, (22) 330.10-11; Rufus 405.3-7 Spengel-Hammer. There appears to be no evidence that any rhetor before Minucianus tried to integrate the theory of asustata with his Model for the analysis of themes possessing stasis; I suspect that in Hermagoras asustata were discussed and classified before the Model was introduced.
- ³³ Admittedly inconsistency is possible. Fortunatianus' presentation of a version of Model 3 similar to that of ps.-Augustine does attempt to identify asustata by means of kataphasis (P_1) and apophasis (D_1). It is perhaps significant that this attempt to integrate the theory of asustata with the Model (RLM 82.12–14) comes adrift from the immediately following survey of the four Hermagorean categories of asustata (82.15–83.9); for example, the category of impudens intentio mentioned at 82.13 corresponds to nothing in Hermagorean. Ps.-Augustine introduces the Hermagorean asustata immediately after his exposition of Model 3, but makes no use of the Model in defining them (RLM 145.34–147.17).

(d) Zeno and Hermogenes

Collapsing the two phases of analysis into one removes a problem from the original Models, but arguably at the cost of triviality. Do the expanded concepts of aition and sunekhon tell us any more than that there are two parties to a dispute? If not, they have lost their function and might as well be abandoned. One rhetor who seems to have taken this step is Zeno. His work is known to us from Sulpicius Victor, whose primary authority he was (RLM 313.3-4); it is generally agreed that he dates to the second century. The example a stasis as summa quaestio, ad quam referenda est omnis oratio (RLM 325.5-6); this equates stasis and zêtêma in terms which echo earlier characterizations of the krinomenon as the central point of reference for a speech (ad Her. 1.26, cf. Quintilian 3.11.25-6). To this extent, therefore, his views are identical with those of Minucianus. But he makes no reference to aition or sunekhon.

Although zêtêma and krinomenon will, in general, be identical for Zeno, he recognises one exception. There is a special category of definition (called enkrinomenon) in which krinomenon and zêtêma part company: aliud quidem in quaestionem veniat et aliud iudicetur (RLM 338.19–24). For example: a man raids a cenotaph and is charged with grave-robbery. The krinomenon in this case is whether the man was a grave-robber, but the zêtêma is whether a cenotaph is a grave. Zeno regards enkrinomena as a species of complex definition; in Syrianus (II 100.7–20, 115.17–116.24) an equivalent category is counted as a variant of simple definition, but the substance is the same. One of Syrianus' illustrations is the adulterous eunuch: the krinomenon is the killing, the zêtoumenon is whether the eunuch was an adulterer. Another commentator on Hermogenes (RG 4.532.6–535.6) also uses the adulterous eunuch to illustrate this category, although (surprisingly) Zeno's cenotaph example appears here as an instance of straightforward definition in which krinomenon and zêtêma are identical.

Stasis in this kind of case is determined by the $z\hat{e}t\hat{e}ma$; the definitional aspect of the case (e.g., whether a cenotaph is a grave) determines the stasis of the whole. But there is one subtle difference between Zeno on the one hand, and Syrianus and the scholiast on the other. For Zeno, both $z\hat{e}t\hat{e}ma$ and krinomenon are formulated as questions, the answer to the latter (is he a grave-robber?) dependent on the answer to the former (is a cenotaph a grave?). But for Syrianus and the scholiast the krinomenon is not expressed as a question (e.g. did the man kill an adulterer?) but is the act charged (the killing). To put it another way, the krinomenon is identified with the underlying facts of the case (the $\dot{\nu}\pi o\kappa\epsilon \dot{\nu}\mu\epsilon\nu o\nu$ $\pi\rho\hat{a}\gamma\mu a$), not with any question posed by or about those facts.

This brings us to Hermogenes. He cannot have recognised enkrinomena, 36 since

³⁴ Zeno: Gloeckner (n. 23), 103-8; H. Gärtner, *RE* XA (1972) 140-2 s.v. Zenon (9). There are (I believe) possible indications that Zeno's work may antedate that of Minucianus; if so, the ancient testimony that the system of thirteen *staseis* (which Zeno uses) was introduced by Minucianus (*PS* (6a) 60.14-15; *RG* 5.8.21-2; Syr. II 55.1-3) must be treated with caution. I hope to discuss the point elsewhere. On Sulpicius Victor see O. Schissel, *RE* IVA (1931) 873-8 s.v. Sulpicius (106).

 $^{3\hat{\delta}}$ Compare the distinction in Sopater's treatise on division between $\tilde{\epsilon}\gamma\kappa\lambda\eta\mu a$ and ζήτημα in certain kinds of complex conjecture (RG 8.42.23–43.8, 51.5–16).

³⁶ W. Jaeneke, De statuum doctrina ab Hermogene tradita (Diss. Leipzig, 1904), 145–6, and Calboli Montefusco (n. 1), 88–9, equate Hermogenes' category of 'incident definition' $(\dot{\epsilon}\mu\pi i\pi\tau\omega\nu\ \delta\rho\rho_0s$, 64.15–23) with enkrinomenon. This is a mistake. In Hermogenes' example (a man dreams about the mysteries, and asks an initiate whether his dream was accurate; the initiate assents, and is charged with disclosing the mysteries to an uninitiate) there are two zêtêmata: whether assenting to the other's statement was revealing the mysteries; and whether

these violate his principle that *stasis* can be determined by inspecting the *krinomenon*. But his criteria for identifying *stasis* (is the *krinomenon* clear and complete?) make no sense applied to a question; so his *krinomenon*, like that of Syrianus, must be interpreted as the underlying facts of the case.³⁷ The *krinomenon* in the case of the adulterous eunuch will be (as Syrianus and the scholiast say) the killing. Of course, the fact that the victim was a eunuch is crucial to Hermogenes' understanding of the case: that is what makes it a case of definition. So the *krinomenon* will be not the killing *per se*, but the killing *qua* killing of a eunuch as an alleged adulterer; to identify the *krinomenon* one must take the killing together with all its materially relevant circumstances

The question of how to identify the *krinomenon* comes down, therefore, to the question of how to identify which of the circumstances given in a rhetorical problem are materially relevant. Hermogenes provides no answer to this question; in his treatise the Model for the basic analysis of a rhetorical problem has collapsed to vanishing point. Hermogenes might well have shared Quintilian's opinion (3.11.21–3): simplicius autem instituenti non est necesse per tam minutas rerum particulas rationem docendi concidere... Nam qui viderit quid sit quod in controversiam veniat, quid in eo at per quae velit efficere pars diversa, quid nostra (quod in primis intuendum), nihil eorum ignorare... poterit.

(e) Tyrannus and Syrianus

Hermogenes' example did not kill off the Collapsed Model; it can still be traced in the fourth-century rhetor Tyrannus.³⁸ Syrianus took over Tyrannus' definition of *stasis*, and illustrates it from the case of the rich man who asked for the life of his poor enemy as his reward for heroism; the poor man's death deters other poor men from taking part in public life, and the rich man is charged with crimes against the public interest (II 48.10–50.6):³⁹

 P_{1+2} You harmed the city by killing the poor man. D_{1+2} I did not harm the city in killing someone lawfully made over to me as a reward.

The latter is the *phasis sunektikê* and determines the *stasis* (in this case, counterplea). Syrianus' second illustration is the man found by a newly-slain corpse (see n. 30 above) and charged with homicide. Here he specifies only D_2 as the *phasis sunektikê* (this is the $\mu\epsilon\tau a\theta\epsilon\sigma us$ $ai\tau ias$, that he was standing by the corpse because he wished to bury it), but we should not infer that he retained a two-phase Model. The variation between Syrianus' exposition of his two examples suggests that *sunekhon* does have an extended sense; D_1 and D_2 are seen as a single unity, which can be cited in any of three forms $(D_1, D_2 \text{ or } D_{1+2})$ according to contextual convenience.

the questioner was still, after his dream, uninitiate. Both must be resolved in order to reach a verdict. In *enkrinomena* there is only one *zêtêma*. Once it is established whether a cenotaph is a grave, judgement on whether the man is a grave-robber follows immediately; no further investigation is needed.

 37 PS (22) 330.13–14 equates krinomenon with ὑποκείμενον πράγμα in a summary of Minucianus' theory; but this is unique (Minucianus' krinomenon is treated as a question by Syr. II 50.22–4; cf. PS (13) 209.21–2; RG 4.143.11–12, 7.140.1–3), and I suspect contamination with Hermogenes.

³⁸ Tyrannus: Gloeckner (n. 23), 89–90; W. Stegemann, *RE* VIIA (1948) 1843–7 s.v. Tyrannos

(2). 39 Syrianus does not name Tyrannus as his source; the identification is suggested by *PS* (22) 329.17–20 and *PS* (21) 318.16–319.3, where the same definition is attributed to Tyrannus by name. (The modified form of the definition which is adopted there is found at (23) 339.6–9 = (24) 350.4–11, and in abbreviated form at (13) 206.7–9.)

VI. CONCLUSION

We have seen, therefore, how the impracticality of restricting stasis to the first phase of a two-phase analysis led later theorists to collapse the two phases into one. But this in effect robbed the analytical Model of its point, and in Hermogenes the attempt to provide a theoretical substructure to the doctrine of stasis seems to have been abandoned. Hermogenes is left only with the substantive structure of the doctrine the actual system of staseis, each with its recommended 'division'. From the perspective of the practising teacher of rhetoric this approach makes sense. The practical value of Hermogenes' treatise lies in the sophisticated and effective structures of argument which his divisions offer the would-be speaker or declaimer. In any case, the attempt to work out a substructure for stasis-theory had broken down: the Collapsed Model on offer in various forms in Hermogenes' day had as little theoretical as practical value. But we should not assent too readily to Quintilian's dismissal of the more elaborate schemes. The perspective of the practising rhetor is not the only valid one. The concept of rhetoric as tekhnê, to which Hermogenes too was committed, 40 implies a quest for understanding; the attempts of Hermagoras and his successors to work out a formal Model for the analysis of rhetorical problems, and so to provide a theoretical underpinning for practical work with stasis, were part of that quest.

MALCOLM HEATH

⁴⁰ The allusion in the opening sentence of the treatise (28.3–7) to the definition of $\tau \epsilon \chi \nu \eta$ as σύστημα καταλήψεων συγγεγυμνασμένων πρός τι τέλος εὔχρηστον τῷ βίῳ (SVF 1.21, 2.30–1, cf. Long and Sedley (n. 19) I 259; Quintilian 2.17.41 shows that it had lost any distinctively Stoic flavour) has been recognised since antiquity. But Hermogenes seems to elide its epistemological content in favour of an interest in the historical development of rhetoric (note $\xi \xi$ ἀρχ $\hat{\eta}$ ς ... τῷ χρόν ω).
