

COORDINATION CHEMISTRY REVIEWS, VOL. 93 (1989)

AUTHOR INDEX

Aslanov, L.A., 185	Collin, J.P., 245	Kotowski, M., 19	Sauvage, J.P., 245
Baer, C.D., 1	Constable, E.C., 205	Kravchenko, E.A., 185	Serpone, N., 87
Baker, G.R., 155	van Eldik, R., 19	Mann, T.F., 1	Sharpe, P., 59
Bond, A.M., 1	Evans, D.W., 155	Newkome, G.R., 155	Steel, P.J., 205
Burtzev, M.Y., 185	Henly, T.J., 269	Richardson, D.E., 59	Swegart, D.A., 1
Buslaev, Y.A., 185	Jamieson, M.A., 87	Thomas, N.C., 225	
Camaioni-Neto, C.A., 1		Tondreau, G.A., 1	

Erratum

The following name should be added to the author index of Vol. 92:

Muto, Y., 45

SUBJECT INDEX

Alkyl tin(IV) halide complexes, ligand influence in, 185	8-Methylquinoline and derivatives, cyclometalated complexes of, with the platinum metals, 155
Biheteroaromatic ligands, <i>N,N'</i> -chelating; a survey, 205	Microelectrodes, and variable-temperature techniques, application of, to voltammetric studies in inorganic reaction mechanisms, 1
Carbon dioxide, electrochemical reduction of, mediated by molecular catalysts, 245	Molecular catalysts, electrochemical reduction of carbon dioxide mediated by, 245
<i>N,N'</i> -Chelating biheteroaromatic ligands; a survey, 205	Osmium carbonyl halides, substituted, 225
Cyclometalated complexes, of 8-methylquinoline and derivatives with the platinum metals, 155	Picosecond spectroscopy, of transition metal complexes, 87
Electrochemical reduction, of carbon dioxide mediated by molecular catalysts, 245	Platinum metals, cyclometalated complexes of 8-methylquinoline and derivatives with, 155
Fourier transform ion cyclotron resonance mass spectrometry, application of, in coordination chemistry, 59	Rhenium carbonyl clusters: synthesis, structure, reactivity, 269
High pressure kinetic techniques, application of, to mechanistic studies in coordination chemistry, 19	Transition metal complexes, picosecond spectroscopy of, 87
Mechanistic studies in coordination chemistry, application of high pressure kinetic techniques to, 19	Variable-temperature techniques, application of microelectrodes and, to voltammetric studies of inorganic reaction mechanisms, 1
	Voltammetric studies, of inorganic reaction mechanisms, application of microelectrodes and variable-temperature techniques to, 1
