

Item of interest to coordination chemists

## NEW PUBLICATION IN COORDINATION CHEMISTRY

At the request of the International Conferences on Coordination Chemistry a new publication in coordination chemistry entitled "Current Awareness System in Coordination Chemistry" (CASCC) has been developed and publication has begun. It is published every two weeks and lists the titles, authors, authors' addresses, reference, language of the article and the Chemical Abstracts citation number of all articles appearing during a previous two-week period in the field of coordination chemistry. The publication is divided into 51 subject areas within coordination chemistry (and includes extensive cross-referencing among subject areas), allowing for easy retrieval of information relevant to a particular searcher's scientific interests within coordination chemistry. In addition, the publication provides an author index and a listing of future scientific conferences and new books of interest to persons in the field of coordination chemistry. Information about this publication may be obtained from Professor Stanley Kirschner, CASCC, Department of Chemistry, Wayne State University, Detroit, Michigan 48202 U.S.A.

Readers of our now-demised X-ray Bibliography are advised that the above publication does contain an X-ray bibliography section.
